The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- iv) A market maker's violation of the rules applicable to this marketplace, and/or  
v) A failure of this marketplace's IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are inversely and doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will result in an even greater depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to twice to the inverse performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will depreciate in all, after these two days (and before deduction of the applicable fees), by 12%, while the Parent Index will have appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive trading days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 21% over the same period.

Negative scenario 1	Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	-20%	80	x-2
Day 2	-5%	110	10%	88	x-2
<b>Whole period</b>	<b>4.50%</b>		<b>-12.00%</b>		<b>x-2.67</b>

Negative scenario 2	Case in which the resulting negative leverage is less than 2 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
<b>Whole period</b>	<b>-4.60%</b>		<b>5.60%</b>		<b>x-1.22</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decline over this same period.

Reverse leverage scenario:	Case in which the induced leverage is positive over the period				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
<b>Whole period</b>	<b>-0.25%</b>		<b>-1.00%</b>		<b>X4</b>

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

The investor subscribing to this Compartment is inversely exposed, with a double leverage, to the upward or downward evolution of the French equity market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

## Activity report

The fund replicates the performance of the CAC 40 Double Short GR EUR index (Ticker:CACDSH).

### Performance trend at the closing date:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 Daily (-2x) Inverse UCITS ETF – Acc	FR0010411884	EUR	8.31% <sup>(1)</sup>	9.21%		-93.82%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0930% for the sub-fund. The Tracking Error target for the year was 0.15%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams. This difference is considered as immaterial.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year

### Lyxor's best selection and execution policy

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;

Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

# appendix

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

# appendix

The Compartment in no way benefits from sponsorship, support or promotion and is not sold by Euronext or its subsidiaries (hereinafter referred to as "Euronext") (collectively referred to as the "Holders").

The Holders grant no guarantee and undertake no commitment, whether explicitly or implicitly, relative to the results to be obtained through the use of the CAC 40 DOUBLE SHORT GR INDEX (hereinafter the "Index") and/or relative to the level at which this Index may be at any given moment or day, or of any other type. The index is calculated by or in the name of Euronext. The Holders will not be liable (whether on the basis of negligence or any other basis) for any error affecting the index with regard to any party, and it will have no obligation to inform anyone of any possible error affecting the index.

<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-0.01</b>	-2.04	-0.78	-4.49	-0.76

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartments / feeder</b>	LYXOR CAC 40 DAILY (-1X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

The Lyxor CAC 40 Daily (-1x) Inverse UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an inverse exposure, upwards or downwards, to the French equities market while reproducing the evolution to the CAC 40<sup>®</sup> Short benchmark indicator (gross dividends reinvested) (the “Benchmark indicator”) and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the CAC 40<sup>®</sup> Short strategy index.

The anticipated level of the ex-post tracking error under the normal market conditions is 0.08%.

### Benchmark Indicator

The Benchmark Indicator is the CAC 40<sup>®</sup> Short strategy index (gross dividends reinvested, which means that the Benchmark Indicator’s performance includes the gross dividends paid by its underlying equities) listed in Euro.

The Benchmark Indicator provides a daily inverse exposure to the upward or downward evolution of the CAC 40<sup>®</sup> index, dividends reinvested (the “Parent Index”). As such, in case of a decline of the Parent Index over one day, the Compartment’s net asset value will increase on the same day and, in case of an increase of the Parent Index over one day, the Compartment’s net asset value will drop on the same day and the bearers will not benefit from any increase of this Parent Index.

The Parent Index is the main benchmark for the Paris Stock Exchange. It measures the evolution of 40 securities chosen for their strong market capitalisation, their sector-based representativeness and the significant volume of transactions involving them.

The performance of the Benchmark Indicator is equal: to the daily inverse performance of the Parent Index, plus the interest collected each day on twice the valuation of the closing price of the Benchmark Indicator (less the cost of the short sale, relative to one day, on the basket of the Parent Index).

It is therefore an index that represents a short selling strategy on the Parent Index with daily rebalancing. The Benchmark Indicator is an equity index that is calculated, maintained and published by Euronext.

The monitored performance is that of the closing prices of the Benchmark Indicator.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and relative weights of the Benchmark Indicator are available on the website: <https://www.euronext.com/en>

### **Benchmark Indicator publication**

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing price of the stock exchange where the index constituents are listed.

The closing price of the Benchmark Indicator is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is listed on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The composition of the Benchmark Indicator is not revised since it depends on the Parent Index's revision.

The Parent Index is revised quarterly.

The exact composition of the Benchmark Indicator and the rules for its revision published by Euronext are available on the website: <https://www.euronext.com/en>

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Parent Index, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator.

This could be the case in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

**The aforementioned equities will be chosen on the basis of criteria:**

#### **Of eligibility, in particular:**

- Subordination to the main market indices or to the Benchmark Indicator,

- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the eligibility and diversification criteria mentioned above, including the list of eligible indices, investors are invited to visit [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

**3. Off-balance sheet assets (derivative instruments)**

The Compartment will employ over-the-counter index-linked swaps exchanging the value of the assets of the Compartment for the value of the Benchmark Indicator (as described in paragraph 1 above of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

**7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

**8. Financial guarantees**

In all cases where the investment strategy employed exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the liability of that counterparty to the Compartment under the secured transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

**In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:**

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;

- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**Risks related to collateral management**

**Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**Risk of daily readjustment of the leverage**

Investors are inversely exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. The daily readjustment shown in the formula of the underlying "short" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to the inverse performance of the Parent Index. Investors are indeed under-exposed to volatility.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will have depreciated in total, after these two days (and before deduction of the applicable fees), by 5.5%, while the Parent Index will have appreciated by 4.5% in total.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 10.25% over the same period.

**Negative scenario 1**

Case in which the resulting negative leverage is greater than 1 within the scenario of an increase of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	10%	100	-10%	100	x-1
Day 2	-8%	110	8%	90	
		101.2		97.2	x-1
<b>Whole period</b>	<b>1.20%</b>		<b>-2.80%</b>		<b>x-2.33</b>

### Negative scenario 2

Case in which the resulting negative leverage is less than 1 within the scenario of a decline of the Parent Index

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	-10%	90	10%	110	x-1
Day 2	6%	95.4	-6%	103.4	x-1
<b>Whole period</b>	<b>-4.60%</b>		<b>3.40%</b>		<b>x-0.74</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decline over this same period.

### Reverse leverage scenario

Case in which the induced leverage is positive over the period

	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
Day 1	5%	105	-5%	95	x-1
Day 2	-5%	99.75	5%	99.75	x-1
<b>Whole period</b>	<b>-0.25%</b>		<b>-0.25%</b>		<b>x1</b>

### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

#### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

#### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

#### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

### **Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

### **Subscribers concerned and typical investor profile**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the Eurozone equity market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

## Activity report

The fund replicates the performance of the CAC40 Short Index EUR (Ticker:CACSH).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 Daily (-1x) Inverse UCITS ETF - Acc	FR0010591362	EUR	8.78% <sup>(1)</sup>	9.29%		-67.80%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0482% for the sub-fund. The Tracking Error target for the year was 0.08%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

## Disclaimer

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

**Transparency of securities financing operations and reuse of financial instruments SFTR regulation**  
(Accounting currency of the CIU)

**1. General information.**

**1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.**

Securities lending	
% of loaned assets	-

**1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.**

	Securities lending <sup>(1)</sup>	Securities borrowing <sup>(2)</sup>	Repo operations <sup>(3)</sup>	Reverse repo operations <sup>(4)</sup>	TRS <sup>(5)</sup>
Absolute value	-	-	-	-	138,592,070.56
% of assets under management	-	-	-	-	100.00

<sup>(1)</sup> The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

<sup>(2)</sup> The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

<sup>(3)</sup> The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

<sup>(4)</sup> The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

<sup>(5)</sup> The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

# appendix

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

<b>Net asset value</b>	<b>19.9086</b>	18.3023	22.0613	23.6359	28.8022
<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>0.72</b>	-5.20	-0.74	-5.71	-4.73

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 19 April 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR CAC MID 60 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR CAC MID 60 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification**

French equities.

At least 60% of the Lyxor CAC Mid 60 (DR) UCITS ETF Compartment (“the Compartment”) is permanently exposed in at least a French equity market.

The Compartment is an UCITS ETF type index fund.

### **Terms of determination and allocation of amounts available for distribution**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### **Management objective**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to reproduce, both upwards and downwards, the evolution of the evolution of the CAC Mid 60 Gross Total Return index (gross dividends reinvested) (the “Benchmark Indicator”) listed in euros, while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### **Benchmark indicator**

The Benchmark Indicator is a Gross Total Return index, (gross dividends reinvested), which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities).

The Benchmark Indicator is an index that is weighted by floating market capitalisation, which measures the changes to 60 midcap securities listed on the Euronext Paris regulated markets.

The eligible securities are ranked by floating market capitalisation and traded capital. Only the best-ranked securities are used and they are not part of the CAC Large 60 index.

The Benchmark Indicator is an equities index calculated and published by the index supplier Euronext. The Benchmark Indicator is an index that measures the performance of the 60 best ranked securities that are not part of the CAC Large 60 index. A buffer zone is applicable where the current settlers ranked 56 to 65 have priority compared to the candidate securities that are not part of the CAC Mid 60 or CAC Large 60 indices when revised. The weight of each security in the index is adjusted according to its equity market capitalization on the basis of the float. The float is rounded to the superior limit by stage of 5%.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the website: <https://www.euronext.com/en>

The monitored performance is that of the closing price of the Benchmark Indicator.

### **Benchmark indicator publication**

The Benchmark Indicator's closing price is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext administrator of the Benchmark Indicator is listed on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The review of the composition and number of shares takes place quarterly at the close of business on the third Friday of March, June, September and December.

The exact composition of the Parent Index and Euronext rules for revising the composition of this index, and consequently that of the Benchmark Indicator, are available on the website: <https://www.euronext.com/en>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

## **Investment strategy:**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

The website [www.lyxoretf.com](http://www.lyxoretf.com) has a page dedicated to the Compartment, which allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs). The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20 % of the Compartment's assets may be exposed to equities of any one issuing body. This 20% limit may be increased to 35% for a single issuing entity where this is justified by exceptional market conditions, such as when certain securities are substantially dominant and/or in the case of high volatility of a financial instrument or securities related to an economic sector represented in the Benchmark Indicator. This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

The Compartment will be mainly invested in securities making up the Benchmark Indicator.

At all times, the Compartment will invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the agreement on the European Economic Area and that has signed, with France, a tax convention that includes an administrative assistance clause for the purpose of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

Investment in the assets of undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net asset.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

### **3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

### **7. Temporary securities acquisition and sale operations**

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including:

#### **Nature of the operations used:**

- securities lending and borrowing by reference to the Monetary and Financial Code

#### **Nature of the interventions, all operations being limited to the achievement of the management objective:**

- optimisation of the Compartment’s income
- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment’s assets.
- Expected proportion of assets under management which may be subject to securities financing transactions: 0% of the Compartment’s assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the “Agent”). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment’s behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment’s behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent. Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions.

#### **In the event of recourse to such temporary assignments**

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.
- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, will be those borne by the management company, the Agent (where applicable) and/or other intermediaries involved in these operations in connection with their services.
- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment’s gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment’s annual report.
- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment’s overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the annual report of Sicav Multi Units France will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

#### **8. Financial guarantees**

In all cases where the investment strategy employed involves a counterparty risk for the Compartment, in particular in connection with the Compartment's use of forward exchange contracts traded over-the-counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to or traded on a regulated market of an EU Member State, on a stock exchange of an OECD Member State or on a stock exchange of another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

### **Reinvestment of received guarantees.**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- i) Deposited in an authorised institution;
- ii) Invested in high-quality government bonds;
- iii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time;
- iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**Risk arising from a lack of perfect replication**

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

**Liquidity risk on a place of listing**

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**Risk related to the use of efficient portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

**Risks related to collateral management**

**Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**Risk that the management objective may only be partially reached**

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**Risk related to the use of futures**

On an ancillary basis, the Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps.

These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

**Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

**Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

**Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

**Risk linked to a transaction involving securities comprising the Benchmark Indicator**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Eligible subscribers and typical investor profile:**

The Compartment is open to any subscriber wishing to be exposed to the performance of the 60 best-ranked securities that are not part of the CAC Large 60 index.

An investor subscribing to this Compartment wishes to obtain an exposure to the Indonesian equity market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks. Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

# Activity report

The fund replicates the performance of the CAC MID60 GRO TR INDEX EUR index (Ticker:CM1GR).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC MID 60 (DR) UCITS ETF - Dist	FR0011041334	EUR	-16.15% <sup>(1)</sup>	-15.67%		73.92%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.0603% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO2e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

LYXOR CAC MID 60 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR CAC MID 60 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

Utilities		3.1%	1.0%						

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 4%  
Yellow Flag 14%  
Green Flag 81%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
48	82	91	Scope 1 reported (vs estimated)	92%
			Scope2 reported (vs estimated)	72%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.0%	0.9%	2.5%
Some efforts	82.0%	96.0%	65.9%
Limited efforts/information	5.0%	3.1%	0.1%
No effort/No evidence	12.1%	0.0%	31.4%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	1.0%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	0.0%
Liquid Fuel	Natural Gas
Nuclear	Renewables
	63.5% Thermal Coal
	36.5%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	11%
20-49.9%	3%
50-100%	5%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	6.3%
Energy Efficiency	11.9%
Green Building	8.3%
Pollution Prevention	6.4%
Sustainable Water	2.4%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.8%
Energy Efficiency	0.5%
Green Building	2.9%
Pollution Prevention	0.7%
Sustainable Water	0.0%

## Physical Risk Corporate

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	58
Number of Voted Meetings	2
Participation rate at General Meetings	3.4%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	91.7%	8.3%	0.0%
Directors Related	25.0%	75.0%	0.0%
Non-Salary Comp.	50.0%	38.9%	11.1%
Capitalization	11.1%	88.9%	0.0%

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor CAC MID 60 (DR) UCITS ETF fund participated during the financial year.

France	100.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

*(Accounting currency of the CIU)*

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the date of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the net asset value calculation date. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the net asset value calculation date. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities for operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the WM Reuters on the same day of the closing date of the Compartment's net asset value.

# appendix

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company, including tax <sup>(1)</sup>	Net assets	maximum 0.50% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commission	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

<b>Liabilities</b>					
Temporary financial securities operations	-	-	-	-	-
Financial accounts	42,893.41	-	-	-	-
<b>Off-balance sheet</b>					
Hedging	-	-	-	-	-
Other operations	-	-	-	-	-

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	-	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>5,500.00</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Security deposits (paid)	5,500.00
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>6,424.97</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	6,401.06
Miscellaneous debtors and creditors	23.91
-	-
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Equity Dist / FR0011041334	6,733	1,272,237.38	9,000	1,691,344.80
Equity I-EUR / FR0011046754	-	-	-	-
Subscription / redemption commission by equity category:		Amount		Amount
Equity Dist / FR0011041334		3,689.49		507.40
Equity I-EUR / FR0011046754		-		-
Retrocessions by equity category:		Amount		Amount
Equity Dist / FR0011041334		-		-
Equity I-EUR / FR0011046754		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
Equity Dist / FR0011041334		3,689.49		507.40
Equity I-EUR / FR0011046754		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Equity Dist / FR0011041334	<b>0.50</b>
Equity I-EUR / FR0011046754	-
Outperformance commissions (variable fees): amount of costs for the year	<b>Amount</b>
Equity category:	
Equity Dist / FR0011041334	-
Equity I-EUR / FR0011046754	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	-

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO OVERNIGHT RETURN UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR EURO OVERNIGHT RETURN UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

The Lyxor Euro Overnight Return UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

Class of Acc equities: Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The Compartment's management objective is to replicate the performance of the Solactive Euro Overnight Return Index (gross dividends reinvested) (the "Benchmark Indicator"), listed in euro (EUR), both upwards and downwards, regardless of its performance, while minimising the tracking error between the Fund's performance and that of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

### Benchmark indicator

The Benchmark Indicator is the Solactive Euro Overnight Return index (gross dividends reinvested) of the “Total Return” type (meaning that it capitalises the interest).

The Benchmark Indicator is calculated and maintained by Solactive AG.

The Benchmark Indicator is calculated from the EONIA (European Overnight Index Average) rate that is the daily reference rate for blank interbank deposits (i.e. without being secured by securities) carried out from day to day in the Eurozone. Calculated by the European Central Bank and published by the European Banking Federation, the EONIA rate is the average, weighted in terms of its amounts, of the rates actually traded on the interbank euro money market during the day by a sample of 57 major banks for deposits/loans until the next trading day. It is one of the two benchmark rates for the Eurozone money market, with the other being the EURIBOR, that, for its part, covers terms from one week to one year.

The Benchmark Indicator is calculated using the following formula:

Where  $IINV[T+1]$  represents the index on the date T+1;

$IINV[T]$  is the index on the previous trading day;

$n[T+2,T+3]$ , the number of actual days between T+2 and T+3;

rE the EONIA fixing published in T between 6:45 p.m. and 7 p.m.

An exhaustive description of the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and respective importance of the components of the Benchmark Indicator are available on the website: <https://www.solactive.com>. Additional information can also be found on the site [www.euribor.ebf.eu](http://www.euribor.ebf.eu).

The performance monitored is that of the fixing of the Benchmark Indicator determined by Solactive AG.

### Benchmark indicator publication

Solactive AG is responsible for the calculation and the diffusion of the value of the Benchmark Indicator.

The characteristics of the Benchmark Indicator are available at <https://www.solactive.com>.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Solactive AG director of the Solactive Euro Overnight Return index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

### **Benchmark indicator revisions**

Taking into account the distinctive features of the Benchmark Indicator, based uniquely on the EONIA rate, the Benchmark Indicator shall not undergo periodic revisions.

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international securities, from all economic sectors, listed on all markets, including small cap markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

In managing its exposure, the Compartment may be exposed to up to 20% of its assets in equities of any one non-sovereign issuer.

This limit of 20% may be increased to 35% for a single issuing entity, where this proves justified by exceptional market conditions, in particular when certain securities are largely dominant and/or in the event of high volatility of a financial instrument or securities linked to an economic sector represented in the Benchmark Indicator. This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

Notwithstanding the assumptions of the above paragraph, the securities guaranteed or issued by a single issuer may represent up to 35% of the asset and 100% of the asset if the UCITS hold at least 6 issuances, none of which being superior to 30% of the asset. The relevant securities are financial instruments issued or guaranteed by an OECD Member State, the regional authorities of an EU Member State or a signatory of the agreement on the EEA.

In the present case, the manager intends to primarily use the following assets:

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will be invested primarily in the equities comprising the Benchmark Indicator.

**The abovementioned equities will be selected on the basis of criteria:**

Of eligibility, in particular:

- Senior debt
- Fixed maturity
- Maximum residual maturity
- Minimum issuing amount
- Requirement of a minimal threshold in S&P rating or equivalent.

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the eligibility and diversification criteria mentioned above, including the list of eligible indices, investors can visit: [www.lyxoretf.com](http://www.lyxoretf.com).

At least 60% of the value of the Compartment's assets corresponds to balance sheet assets with a residual maturity of two years or more.

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the Compartment's net assets. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

The guaranteed securities issued by a single issuer can represent up to 35% of the assets, and 100% of the assets if the UCITS holds at least six issues, none of which exceeds 30% of the assets. The securities are instruments issued or guaranteed by an OECD Member State, the regional authorities of an EU Member State or a signatory of the agreement on the EEA.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

**3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

**7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

## **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

### **Reinvestment of received guarantees:**

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Interest rate risk**

The Compartment is exposed to any evolution of the money markets following the decision of a central bank. Therefore, should the interest rates reach a level below the level of management fees and other structural costs, the Compartment's net asset value could decrease.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or

- iii) The impossibility for a given place of listing to obtain or calculate the Fund's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

#### **Risks related to collateral management**

##### **Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

##### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

#### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

##### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses future financial instrument ("FFI") traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

##### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

##### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

##### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

##### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

##### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the Benchmark Indicator is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator’s components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator’s performance.

#### **Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

**Risk related to the modification of the Benchmark Index** to comply with the reform and regulation of “benchmark indices”, such as LIBOR, EURIBOR and including other types of benchmark indices on interest rates, equities, commodities and exchange rates.

Interbank rates (including LIBOR, EURIBOR, exchange rates and other types of rates and indices that are considered “benchmarks indicators”) are subject to ongoing national and international regulatory reforms. As a result of these reforms, the benchmarks indicators may perform differently than in the past or disappear altogether, or there may be other unforeseeable consequences. These changes may have a significant or limited effect on the achievement of the Compartment’s investment objective. Some of the main regulatory proposals and initiatives in this area are the IOSCO Principles for Financial Benchmarks (the “IOSCO Benchmark Index Principles”) and the European Union Regulation “on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds” (the “EU Benchmarks Regulation”).

With specific regard to interbank rates, the competent authorities have identified ‘risk-free rates’ that will eventually serve as the primary benchmark, including (i) with regard to sterling LIBOR, a reformed version of the Sterling Overnight Index Average (SONIA) that will make SONIA the primary benchmark for the sterling interest rate by the end of 2021, (ii) with regard to EONIA and Euribor, a new short-term euro rate (ESTER), which will be the new risk-free rate for the euro (to replace EONIA), and (iii) with regard to USD LIBOR, the Secured Overnight Financing Rate (SOFR), which will be the main benchmark for the US dollar interest rate. The risk-free rates have a different methodology and other important differences from the interbank rates they will replace and have little or no history. Ongoing international and/or domestic reform initiatives and increased regulatory oversight of benchmarks could generally increase the costs and risks associated with administering or participating in the establishment of a benchmark and complying with any applicable regulations or requirements. These factors may deter market participants from continuing to administer or contribute to benchmarks, trigger changes in the rules or methodologies used in relation to benchmarks and/or lead to the disappearance of benchmarks, including EURIBOR and LIBOR. This may result in a change of the benchmark or other consequences for the Compartment, such as delisting or liquidation. Such a consequence could have an effect on the Compartment’s net asset value and/or the calculation of the Compartment’s performance fees, which cannot be evaluated at this time.

#### **Subscribers concerned and typical investor profile**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the money market within the Eurozone.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for one year, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than one year. This minimum term must notably be considered in view of the quotation ranges, brokerage fees and possible stock market tax borne by the investor.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

## Activity report

The fund replicates the performance of the Solactive Euro Overnight Return Index EUR (Ticker:SOEUONRT).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Euro Overnight Return UCITS ETF - Acc	FR0010510800	EUR	-0.67% <sup>(1)</sup>	-0.47%		4.12%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.0011% for the sub-fund. The Tracking Error target for the year was 0.2%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethis data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

## **1 Accounting rules and methods**

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value.

Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.

- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.15% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

# appendix

**Accounting currency**

The Compartment accounting is carried out in Euro.

### 3. Information supplements

#### 3.1 Financial instruments: breakdown by the instrument's legal or economic type

##### 3.1.1 Breakdown of the "Bonds and similar securities" item by type of instrument

	Traded on a regulated or similar market	Not traded on a regulated or similar market
Index-linked bonds	16,626,334.92	-
Convertible bonds	-	-
Fixed-rate bonds	689,650,126.31	-
Variable-rate bonds	96,020,996.21	-
Zero-coupon bonds	19,180,992.33	-
Participating securities	-	-
Other instruments	-	-

##### 3.1.2 Breakdown of the "Debt securities" item by legal or economic type

	Traded on a regulated or similar market	Not traded on a regulated or similar market
Treasury Bills	36,226,899.31	-
Negotiable EUropean Commercial Paper (NEU CP) issued by non-financial issuers	-	-
Negotiable EUropean Commercial Paper (NEU CP) issued by bank issuers	-	-
Negotiable EUropean Medium Term Note (NEU MTN)	-	-
Other instruments	-	-

##### 3.1.3 Breakdown of the "Sale operations on financial instruments" item by instrument type

	Securities under reverse repurchase agreement sold	Securities borrowed sold	Securities acquired with redemption right sold	Short sales
Equities	-	-	-	-
Bonds	-	-	-	-
Debt securities	-	-	-	-
Other instruments	-	-	-	-

LYXOR EURO OVERNIGHT RETURN UCITS ETF  
(compartment of the Multi Units France Sicav)

3.1.4 Breakdown of the off-balance sheet headings by market type (notably rates, equities)

	Rate	Equities	Exchange	Other
<b>Hedging</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-
<b>Other operations</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	863,248,640.10
Other commitments	-	-	-	-

3.2 Breakdown by rate types of the asset, liability and off-balance sheet items

	Fixed rate	Variable rate	Revisable rate	Other
<b>Assets</b>				
Deposits	-	-	-	-
Bonds and similar securities	708,831,118.64	112,647,331.13	-	-
Debt securities	36,226,899.31	-	-	-
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	-
<b>Liabilities</b>				
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	28,150,672.47
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.3 Breakdown by residual maturity of the asset, liability and off-balance sheet items

	0-3 months	3 months - 1 year	1-3 years	3-5 years	>5 years
<b>Assets</b>					
Deposits	-	-	-	-	-
Bonds and similar securities	15,913,437.12	50,033,455.19	155,039,697.39	146,374,460.61	454,117,399.46
Debt securities	-	36,226,899.31	-	-	-
Temporary financial securities operations	-	-	-	-	-
Financial accounts	-	-	-	-	-
<b>Liabilities</b>					
Temporary financial securities operations	-	-	-	-	-
Financial accounts	28,150,672.47	-	-	-	-
<b>Off-balance sheet</b>					
Hedging	-	-	-	-	-
Other operations	-	-	-	-	-

(compartment of the Multi Units France Sicav)

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	-	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>59,224,373.17</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Account receivable	-
Deferred settlements sales	59,222,354.87
-	2,018.30
-	-
-	-
Other operations	-
<b>Debts</b>	<b>31,138,540.69</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlements purchases	31,073,686.01
Accrued expenses	64,854.68
-	-
-	-
-	-
Other operations	-

LYXOR EURO OVERNIGHT RETURN UCITS ETF  
(compartment of the Multi Units France Sicav)

### 3.6 Shareholders' equity

	<b>Subscriptions</b>		<b>Redemptions</b>	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	15,369,000	1,605,982,182.80	15,446,000	1,612,776,052.97
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>0.10</b>
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- Equities	-
- Swaps	<b>233,945.08</b>

<b>Net asset value</b>	<b>104.1236</b>	104.8294	105.4469	106.0599	106.5467
<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-0.02</b>	1.13	-0.39	-1.62	-0.11

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

**APPENDIX TO THE REPORT  
intended for Swiss subscribers**

This appendix makes the annual report compliant with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct.

Management commission of the UCITS 0.10 % tax included

Average fortune of the Fund for the period from 01/11/19 to 30/10/20: 1,051,956,543.19

Excerpt of the profit and loss statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020

(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR WORLD WATER (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

International equities.

At least 60% of the Lyxor World Water (DR) UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to replicate, downwards and upwards, the evolution of the World Water Index CW Net Total Return index (the “Benchmark Indicator”), listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The Benchmark Indicator is representative of the performance of the global water sector, which includes: companies that provide water supply or water treatment services, water treatment technologies or environmental services related to water treatment and distribution.

The anticipated level of the ex-post tracking error under normal market conditions is 2%.

### **Benchmark Indicator:**

The Benchmark Indicator is the World Water Index CW Net Total Return index (net dividends reinvested, which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities) (“Cap-Weighted”).

The Benchmark Indicator is an equity index administered by Société Générale, calculated by Solactive AG, based on a model designed by Robeco SAM (Sustainable Asset Management).

The Benchmark Indicator is a reference index dedicated to the water sector.

The Benchmark Indicator is made up of securities listed on the markets in Europe, America, Asia and Oceania, of which a significant part of their incomes comes from one of the three following business sectors:

- Infrastructures: supply of pipes, pumps and meters, and engineering companies;
- Water treatment products and equipment: producers of equipment and technologies for water disinfection, filtration and desalination;
- Distribution and management of water hydraulic networks: companies that distribute water and manage hydraulic treatment units and networks in order to provide overall management of the water cycle.

The weighting of the Benchmark Indicator is calculated on the basis of the floating capitalisations of each of the components adjusted taking into account criteria of optimal liquidity and maximum exposure as indicated in the Benchmark Indicator methodology.

The Benchmark Indicator is analysed and rebalanced every six months (January and July of each year). The performance tracked is the performance of the Benchmark Indicator's closing prices.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: <https://www.sgindex.com>.

#### **Benchmark indicator revision and composition**

The Benchmark Indicator is revised quarterly to account for the changes that affect the stocks eligible for the Benchmark Indicator. Major changes to a company's share capital (e.g. resulting from mergers, acquisitions, etc.) may be implemented in real time.

The exact composition of the Benchmark Indicator, the effective weights of its components and the rules that govern the revision of its composition are available on the website: <https://www.sgindex.com>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

#### **Benchmark indicator publication**

The Benchmark Index is calculated daily using the official closing price of the stock exchange on which the constituent securities are listed. The closing price of the Benchmark Index is available on the website: <https://www.sgindex.com>.

The benchmark administrator is registered in the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices.

### **Investment strategy:**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by the Management Company, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or hedging swaps in particular to minimise the Compartment's tracking error. The Compartment also reserves the possibility, in particular for the purpose of gaining exposure to emerging market securities included in the Benchmark Indicator which may be particularly expensive and/or complex to access, to use financial instruments such as, for example, debt instruments or FFIs traded over-the-counter, including swaps, futures, CFDs.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of balance sheet assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will comply with the investment rules laid down in the European Directive 2009/65/EC of 13 July 2009. The Compartment will be mainly invested in the securities making up the Benchmark Indicator.

The Compartment may hold up to 10% of its net assets in units or equities of the following CIUs or investment funds:

- UCITS under French or foreign law complying with Directive 2009/65/EC - In connection with these investments, the Compartment may subscribe for units or equities of UCITS managed by the Management Company or a company to which it is linked;

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership. As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

Compartment may have recourse to FFIs traded on a regulated or over-the-counter market.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 10% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 0% of the assets under management.

The counterparty to the aforesaid forward financial instruments will not have discretionary power over the composition of the investment portfolio of the Compartment, nor over the underlying assets of the forward financial instruments to the extent and subject to the conditions prescribed by regulations.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

## **4. Securities with integrated derivatives**

• Risks on which the manager wishes to intervene:

equity

• Nature of interventions, all operations being limited to the achievement of the management objective:

exposure

other nature (please specify)

• Nature of instruments used :

EMTN.

• Strategy for using embedded derivatives to achieve the management objective: derivatives will be used on an ancillary basis (up to a maximum of 10% of the net assets).

## **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

## **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

## **7. Temporary securities acquisition and sale operations**

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular to :

• Nature of acquisition transactions used :

securities lending and borrowing with reference to the Monetary and Financial Code ;

• Nature of interventions, all operations being limited to the achievement of the management objective:

optimisation of the income of the Compartment;

Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment's assets.

Expected proportion of assets under management which may be subject to securities financing transactions: 0% of the Compartment's assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the "Agent"). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent. Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments :

1. The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.
2. These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.
3. These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment's annual report.
4. All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

Where Société Générale acts as counterparty to all transactions constituting efficient portfolio management techniques, situations of conflicts of interest may arise between the Management Company and Société Générale, such situations are governed by the Management Company's conflict of interest management policy.

## **8. Financial guarantees**

In all cases where the investment strategy employed involves a counterparty risk for the Compartment, in particular in connection with temporary purchases and sales of securities and the use by the Compartment of forward exchange contracts traded over-the-counter, the Compartment may receive securities which are treated as collateral in order to reduce the counterparty risk associated with such transactions. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;

- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

**Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;

- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile:**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **- Risk related to low diversification of the Benchmark Indicator**

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

#### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **- Risks related to the absence of perfect replication**

Replication of the Benchmark Indicator by means of an investment in all of the Benchmark Indicator's components could prove to be costly or operationally very difficult. Also, the Compartment's manager may employ optimisation techniques, notably the sampling technique that involves investing in a representative selection of securities (but not all securities) comprising the Benchmark Indicator, in different proportions than is the case within the Benchmark Indicator, or even investing in securities other than the components of the index or future financial instruments. The use of these optimisation techniques could result in a greater ex-post tracking error and notably lead to differing performances between the Compartment and the Benchmark Indicator.

#### **- Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT.

In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**- Risk related to the use of effective portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework. The Management Company oversees the potential risks of conflicts of interest related to the execution of intra-group transactions by setting up procedures to identify them, limit them and ensure their fair resolution where necessary.

**- Risks related to collateral management**

**- Operational risk:**

The Compartment may be exposed to the risk of direct or indirect loss as a result of operational risk arising from operational failures in connection with the conclusion of any contract or from errors made by the various parties involved in the collateral management of corporate finance transactions and/or Total Return Swaps (TRS) and/or transactions.) This risk only arises in the context of the management of collateral for securities financing transactions and total return swaps, as referred to in EU Regulation 2015/2365.

**- Legal risk:**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

The Compartment may use Financial Futures Instruments ("FFIs") traded over-the-counter or listed FFIs, in particular futures-type contracts and/or hedging swaps. Such FFIs may involve a range of risks, which are considered at the level of the contract and include (but are not limited to) the following: counterparty risk, event affecting hedging, event affecting the Benchmark Indicator, tax risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investing in FFIs can involve a high level of risk. The amount required to trade certain FFIs is potentially much less than the exposure obtained through these instruments, which implies a "leverage effect" at the level of each transaction. A relatively small market movement would then have a proportionately very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is highly volatile and may therefore be subject to wide fluctuations.

The Compartment may have recourse to OTC FFIs. Over-the-counter transactions may be less liquid than transactions on organised markets, where trading volumes are generally higher and prices may be more volatile.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the equity market with companies that have, as their primary source of income, activities related to water business (infrastructure, water treatment products and equipment, distribution and management of water hydraulic networks).

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. # Activity report

The fund replicates the performance of the World Water Total Return Index CW EUR (Ticker:WOWAXC).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor World Water (DR) UCITS ETF - Dist	FR0010527275	EUR	4.00% <sup>(1)</sup>	4.87%		175.73%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques”

The Tracking Error is 0.0462% for the sub-fund. The Tracking Error target for the year was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Since 07/10/2020, the management method used is that of direct "physical" replication of the World Water Total Return Index CW EUR which consists of the Fund's portfolio being invested directly and mainly in the securities making up the Benchmark Indicator, thus enabling the Fund to achieve its management objective. On this date the Fund changed its name from LYXOR WORLD WATER UCITS ETF to LYXOR WORLD WATER (DR) UCITS ETF.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

## LYXOR WORLD WATER (DR) UCITS ETF (compartment of the Multi Units France Sicav)

---

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

-the Germanwatch climate performance index score

-the environment performance score

-the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

-Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

-Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR WORLD WATER (DR) UCITS ETF

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 0%  
Yellow Flag 0%  
Green Flag 100%

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
62	152	121	Scope 1 reported (vs estimated)	94%
			Scope2 reported (vs estimated)	83%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	7.8%
Some efforts	74.1%	92.9%	43.5%
Limited efforts/information	11.8%	4.5%	16.6%
No effort/No evidence	14.1%	2.5%	32.1%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

5.8%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel
Natural Gas	Nuclear
Renewables	86.1%
Thermal Coal	13.9%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	72%
20-49.9%	16%
50-100%	7%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	29.3%
Energy Efficiency	36.5%
Green Building	0.0%
Pollution Prevention	16.5%
Sustainable Water	84.0%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.5%
Energy Efficiency	0.6%
Green Building	0.0%
Pollution Prevention	0.8%
Sustainable Water	14.3%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High

Water Stress	4.0%	55.9%	40.1%	19.1%	53.0%	28.0%
Toxic Emissions & Waste				39.9%	45.2%	14.9%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor World Water (DR) UCITS ETF fund participated during the financial year.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

#### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

#### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

#### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

*(Accounting currency of the CIU)*

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

# appendix

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Direct and indirect operating costs/expenses related to temporary acquisitions and disposals of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company including tax <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

# appendix

The World Water Index CW Net Total Return index (Wowax) is calculated by Dow Jones Indexes, a department of the company Dow Jones & Company, Inc. ("Dow Jones") and compiled by the SAM ("SAM") group. "Dow Jones" and "Dow Jones Indexes" are registered trademarks of Dow Jones & Company, Inc. The investment products based on the Wowax are not proposed, guaranteed, sold or promoted by Dow Jones Indexes nor by the company SAM; Dow Jones Indexes and SAM express no opinion on the recommendable nature or not of the investment in the said products. Dow Jones, SAM and their respective affiliated companies, sources and distributing agents (collectively the "Index Parties") decline all liability relative to the Société Générale, Lyxor AM or to any customer or third party in case of direct or indirect loss or damage resulting from (i) inaccurate or incomplete data provided by the Wowax, or from delays, interruptions, errors or omissions regarding the said data or all related data (the "Index Data"), or from (ii) any decision or measure taken by Société Générale, Lyxor AM, any customer or third party on the basis of the Index Data. The Index Parties give no explicit or implicit cert to the Société Générale, Lyxor AM, to any of its customers or any third party with regard to the Index Data, notably any certificate pertaining in any way to the appropriateness, order, accuracy, exhaustiveness, validity, marketing, quality or adequacy for a particular purpose, nor any certificate with regard to the results that may be obtained by Société Générale, Lyxor AM, any of its customers or third party relative to the use of the Index Data. The Index Parties decline all liability relative to the Société Générale, Lyxor AM, its customers or third parties in case of operating loss, loss of profits or indirect, special or similar damages of any kind whatsoever, whether consisting of contractual damage, owing to negligence or some other cause, even if they had been informed of the possibility of such damage. There can be no contractual relationship of any kind between Dow Jones or SAM Group and any of the customers of the Société Générale or Lyxor AM for investment products based on the Wowax or linked to the latter. The Lyxor AM ETF, based on the Wowax, is not proposed, guaranteed, sold or promoted by the Index Parties, who express no opinion as to the recommendable nature or not of the investment.

Financial accounts	-	0.02	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	7,728.29	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	117,182.47	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>418,576.47</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Coupons receivable	404,769.37
Security deposits (paid)	13,807.10
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>261,819.95</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	261,807.52
Miscellaneous debtors and creditors	12.43
-	-
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	Amount
Equity Dist / FR0010527275	3,521,333	148,798,617.14	5,332,900	211,179,116.12	
Subscription / redemption commission by equity category:		Amount		Amount	
Equity Dist / FR0010527275		-		-	
Retrocessions by equity category:		Amount		Amount	
Equity Dist / FR0010527275		-		-	
Commissions acquired by the Compartment by equity category:		Amount		Amount	
Equity Dist / FR0010527275		-		-	

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Equity Dist / FR0010527275	<b>0.60</b>
Outperformance commissions (variable fees): amount of costs for the year	<b>Amount</b>
Equity category:	
Equity Dist / FR0010527275	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	-

<b>Unit distribution on net capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)*</b>	<b>0.56</b>	0.65	-	0.66	0.60
<b>Unit tax credit transferred to holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation*</b>	-	0.17	0.53	-2.80	-1.91

\* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the profit or loss and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding equities on that date.

**APPENDIX TO THE REPORT**  
**intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Compartment's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the fund:	31-Oct.	
UCITS management commission:	0.60	% including tax
Average assets of the fund for the period from 01/11/19 to 30/10/20:	686,922,296.12	

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020
Fund management commission	3,390,601.86	2,190,646.35	4,109,687.23
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
<b>Total operating expenses</b>	<b>3,390,601.86</b>	<b>2,190,646.35</b>	<b>4,109,687.23</b>

Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:

TER, including performance fee

$$(4,109,687.23 / 686,922,296.12) * 100$$

TER 0.60 %

<b>Compartment / feeder</b>	LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

The Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment (the “Compartment”) is an index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective;**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an inverse exposure, with double daily leverage, upwards or downwards, to the European equity market while reproducing the evolution to the EURO STOXX 50<sup>®</sup> Daily Double Short benchmark index (gross dividends reinvested) (the “Benchmark indicator”), and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### **Benchmark indicator:**

The Benchmark Indicator is the EURO STOXX 50<sup>®</sup> Daily Double Short strategy index (gross dividends reinvested, which means that the Benchmark Indicator’s performance includes the gross dividends paid by its underlying equities), listed in Euros (EUR).

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd.

The Benchmark Indicator offers a daily inverse exposure, upwards or downwards, to the evolution of the Euro Stoxx 50<sup>®</sup> Total Return index (the “Parent Index”), with double leverage. As such, in case of a decline of the Parent Index over a given day, the Compartment’s net asset value will increase twofold over that same day and, in case of an increase of the Parent Index over a given day, the Compartment’s net asset value will drop twofold over that same day and the shareholders will not benefit from any increase of this Parent Index.

The Parent Index consists of the 50 largest securities coming from countries member of the Eurozone. These securities have been selected for their market capitalisation, liquidity and sector-based representativeness. The Parent Index strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Eurozone.

The daily performance of the Benchmark Indicator is equal: to twice the inverse daily performance of the Parent Index, plus interest (EONIA) collected each day on three times the valuation of the closing price of the Benchmark Indicator and less the costs resulting from the short sale of the securities comprising the Parent Index.

It is therefore an index that represents a strategy of taking short positions with double daily leverage on the Parent Index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator components are available on the website: [http://www.stoxx.com/download/indices/rulebooks/stoxx\\_strategy\\_guide.pdf](http://www.stoxx.com/download/indices/rulebooks/stoxx_strategy_guide.pdf)

### **Benchmark indicator publication**

The Benchmark Indicator's closing price is available on the website: [www.stoxx.com](http://www.stoxx.com)

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd administrator of the Benchmark Indicator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

### **Benchmark indicator revision and composition**

The composition of the Benchmark Indicator depends on the revision of the Parent Index which occurs annually in September. The exact composition and the revision rules of the Benchmark Indicator are published by Stoxx Ltd and are available on the website: [www.stoxx.com/indices](http://www.stoxx.com/indices). The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will employ over-the-counter index-linked swaps exchanging the value of the assets of the Compartment for the value of the Benchmark Indicator (as described in paragraph 1 above of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment’s account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment’s assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

### **Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **- Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

#### **- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment’s assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are inversely and doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely amplified and will result in an even greater depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to twice to the inverse performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will depreciate in all, after these two days (and before deduction of the applicable fees), by 12%, while the Parent Index will have appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive trading days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 21% over the same period.

Negative scenario 1	Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
<b>Whole period</b>	<b>4.50%</b>		<b>-12.00%</b>		<b>x-2.67</b>

Negative scenario 2	Case in which the resulting negative leverage is less than 2 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
<b>Whole period</b>	<b>-4.60%</b>		<b>5.60%</b>		<b>x-1.22</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decline over this same period.

LYXOR EURO STOXX 50 DAILY (-2X) INVERSE UCITS ETF  
(compartment of the Multi Units France Sicav)

Reverse leverage scenario:	Case in which the induced leverage is positive over the period				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
<b>Whole period</b>	<b>-0.25%</b>		<b>-1.00%</b>		<b>x4</b>

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the European equity markets with double daily leverage.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. “U.S. Persons” (as defined in the prospectus “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

## Activity report

The fund replicates the performance of the EURO STOXX 50 Daily Double Short EUR Index (Ticker: SX5T2S).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF - Acc	FR0010424143	EUR	2.70% <sup>(1)</sup>	3.57%		-92.20%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0965% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** *(not audited by the auditor)*

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

**Transparency of securities financing operations and reuse of financial instruments SFTR regulation**  
(Accounting currency of the CIU)

**1. General information**

**1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents**

Securities lending	
% of loaned assets	-

**1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking**

	Securities lending <sup>(1)</sup>	Securities borrowing <sup>(2)</sup>	Repo operations <sup>(3)</sup>	Reverse repo operations <sup>(4)</sup>	TRS <sup>(5)</sup>
Absolute value	-	-	-	-	124,058,281.43
% of assets under management	-	-	-	-	100.00

<sup>(1)</sup> The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

<sup>(2)</sup> The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

<sup>(3)</sup> The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

<sup>(4)</sup> The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

<sup>(5)</sup> The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

**2. Concentration data**

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the management company including tax <sup>(1)</sup>	Net assets	maximum 0.60% per year including tax
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

# appendix

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

appendix

STOXX and its Licensors have no other relationship with the license-holder than through the license granted in respect of EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index and the associated trade marks for the purpose of using them with the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment.

STOXX and its licensors:

- Make no representation or warranty concerning the merits of trading in the equities or units of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment, which they shall also refrain from selling or promoting.
- Make no investment recommendation to anyone whomsoever with respect to the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment or other recommendation of any type whatsoever.
- Shall not be held responsible or liable nor have any obligation in respect of the issuance, number or pricing of the equities of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment, and will make no decisions in relation to this.
- Shall not be held responsible or liable nor have any obligation in respect of the administration, management or marketing of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment.
- Have no obligation to take into account the needs or requirements of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment or of its shareholders, to determine, compose or calculate the EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index.

STOXX its Licensors decline any responsibility in relation to the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment. More specifically, STOXX and its Licensors do not make or ensure any guarantee whatsoever, either expressed or implied, concerning:

- The results that may be obtained by the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment, by the shareholders of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment or by anyone who directly or indirectly uses the EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index or its data.
- The accuracy or completeness of the EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index and of the data it contains.
- The negotiability of the EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index and its date and their appropriateness for a specific use or purpose.
- STOXX and its Licensors shall not be held liable for any error, omission or interruption whatsoever in the EURO STOXX 50<sup>®</sup> DAILY DOUBLE SHORT index or in its data.
- Under no circumstance shall STOXX or its licensors be liable for any economic loss whatsoever, including consequential loss, even if STOXX and its licensors are informed of such risk.

The license agreement between LYXOR INTERNATIONAL ASSET MANAGEMENT and STOXX was agreed in their sole interests, and not in the interest of shareholders of the Lyxor EURO STOXX 50 Daily (-2x) Inverse UCITS ETF Compartment or of third parties.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

Equities from Eurozone countries.

At least 60% of the Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF Compartment (the "Compartment") is permanently exposed in one or several markets of equities that have been issued in one or several Eurozone countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

Class of Acc equities: Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The Compartment's management objective is to obtain an exposure with a daily x2 leverage, upwards or downwards, to the European equities market while reproducing the evolution of the EURO STOXX 50<sup>®</sup> Daily Leverage Net Total Return benchmark index (gross dividends reinvested) (the "Benchmark indicator"), and while insofar as possible minimising the tracking error between the Compartment's performances and those of the Benchmark indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### Benchmark indicator

The benchmark indicator is the EURO STOXX 50<sup>®</sup> Daily Leverage Net Total Return strategy index, (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities), listed in Euro.

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd. It is calculated by Deutsche Börse AG.

The Benchmark Indicator is a strategy index that reflects the evolution of the EURO STOXX 50<sup>®</sup> Index (the "Parent Index") with a daily leverage effect of x2. The daily performance of the Benchmark Index is equal to twice the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index increased by 2% on a trading day, the Reference Index increased by 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decrease in the Parent Index on a trading day, the Benchmark Index decreases by 4% on the same trading day, less borrowing costs.

The Parent Index is composed of the 50 largest stocks in the Eurozone member countries. These stocks are selected for their market capitalization, liquidity and sector representativeness. The Parent Index strives to respect a weighting by country and by economic sector that reflects as much as possible the economic structure of the Eurozone.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the website: [www.stoxx.com/indices](http://www.stoxx.com/indices).

The monitored performance is that of the closing prices of the index in Euro.

### **Benchmark indicator publication**

The closing price of the Benchmark Indicator is available on the website: [www.stoxx.com/indices](http://www.stoxx.com/indices)

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd director of the EURO STOXX 50@ Daily Leverage Net Total Return benchmark index has until 01.01.2020 to request approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Reference Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the PMC has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The Benchmark Indicator is not revised since it depends on the revision of the Parent Index, which occurs annually, in September.

The exact composition of the Benchmark Indicator and the rules for its revision published by Stoxx Ltd. are available on the website: [www.stoxx.com/indices](http://www.stoxx.com/indices).

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Advantages of the "leveraged" strategy**

The "Leveraged" strategy (with a leverage effect) is a dynamic strategy that is applied to the Benchmark Indicator.

By borrowing securities to carry out the strategy, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index on that day. If the Benchmark Index rises, the gains over a given trading day are twice as much as obtained with a "single" investment in the Parent Index over that day. Conversely, if the Benchmark Index falls, the loss over a given trading day will be twice as much, due to the multiplier effect of the leverage. This multiplier effect also applies to the risks of this strategy.

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity.

This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will be invested primarily in the equities comprising the Benchmark Indicator.

**The aforementioned equities will be chosen on the basis of criteria:**

**- of eligibility, in particular:**

- Subordination to the main market indices or to the Benchmark Indicator,
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

**- of diversification, notably:**

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- Geographical area,
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

The Compartment will employ over-the-counter index-linked swaps exchanging the value of the assets of the Compartment for the value of the Benchmark Indicator (as described in paragraph 1 above of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to aforementioned forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

## **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

### **Reinvestment of received guarantees:**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- deposited with an enabled institution;
- invested in high-quality State bonds;
- used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**Risks related to collateral management**

**Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**Risk of daily readjustment of the leverage**

Investors are doubly exposed to the fluctuations affecting from one day to the next the price or level of the Parent Index. In particular, any depreciation of the underlying market will be amplified and will result in an even larger depreciation of the net asset value of the Compartment. The daily readjustment shown in the formula of the underlying “leverage” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to twice the performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one business day and then depreciates by 5% on the next trading day, the ETF will have appreciated in all, after these two days (and before deduction of the applicable fees), by 8%, while the Parent Index will have appreciated by 4.5% over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have depreciated (before deduction of the applicable fees) by 19% over the same period.

**Favourable case upwards**

	<b>Parent Index</b>	<b>Benchmark Indicator</b>	<b>Induced leverage</b>
performance day 1	+10%	+20%	x2
performance day 2	-5%	-10%	x2
<b>Global performance for the period</b>	<b>+4.5%</b>	<b>+8%</b>	<b>x1.78</b>

**Favourable case downwards**

	Parent Index	Benchmark Indicator	Induced leverage
performance day 1	-5%	-10%	x2
performance day 2	-5%	-10%	x2
<b>Global performance for the period</b>	<b>-9.75%</b>	<b>-19%</b>	<b>x1.95</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts an increase over this same period.

**Example reverse leverage :**

	Parent Index		Benchmark Indicator		Induced leverage
	performance day i	Day i value	performance day i	Day i value	
day 1		100		100	
	20%	120	40%	140	x2
day 2	-20%	96	-40%	84	x2
day 3	30%	124.8	60%	134.4	x2
day 4	-20%	99.84	-40%	80.64	x2
day 5	10%	109.824	20%	96.768	x2
<b>Whole period</b>	<b>+9.82%</b>		<b>-3.23%</b>		<b>x -0.33</b>

**Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The index is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The index is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said index,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the index (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

### **Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

### **Subscribers concerned and typical investor profile**

The Compartment is open to any subscriber.

An investor subscribing for this Compartment wishes to obtain an exposure to the market of securities of large companies of the Eurozone.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

## Activity report

The fund replicates the performance of the EURO STOXX 50 Daily Lev EUR index (Ticker: SX5TL).

### Performance trend at the closing date:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (2x) Leveraged UCITS ETF - Acc	FR0010468983	EUR	-36.62% <sup>(1)</sup>	-36.52%		-58.09%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.2358% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested).
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%  
Orange Flag 30%  
Yellow Flag 45%  
Green Flag 22%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
151	180	188	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	98%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	9%
Thermal Coal	0%
Natural Gaz	9%
Oil	9%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0032
Oil (MMBOE)	0.0028

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1 139.3
Gas	1 020.0
Total	2 159.2

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	150.4
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	150.4
Other	2 008.9

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.7%	7.8%	13.6%
Some efforts	93.7%	90.3%	78.6%
Limited efforts/information	0.0%	0.0%	3.3%
No effort/No evidence	3.6%	1.8%	4.6%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	9.8%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	19.8%
Liquid Fuel	3.6%
Natural Gas	37.5%
Nuclear	14.1%
Renewables	17.3%
Thermal Coal	7.7%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	26%
20-49.9%	3%
50-100%	0%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	18.8%
Energy Efficiency	21.4%
Green Building	1.7%
Pollution Prevention	4.4%
Sustainable Water	5.5%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.8%
Energy Efficiency	2.2%
Green Building	0.1%
Pollution Prevention	0.1%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

(1) including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

# appendix

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

Class of Acc equities: Capitalisation of all the amounts available for distribution.

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	USD	DKK	SEK	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	12,686,988.75	7,691,138.35	4,644,040.68	963,882.94
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>2,122,745.79</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	2,122,745.79
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>2,149,168.42</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Account payable	1,156,527.34
Deferred settlement purchases	966,218.44
Accrued expenses	26,422.64
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

	<b>Subscriptions</b>		<b>Redemptions</b>	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	6,153,092	135,873,109.23	5,283,285	128,910,635.63
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>0.40</b>
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees .....	<b>None</b>
3.8.2 Description of the other commitments received and/or given .....	<b>None</b>

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	<b>606,604.79</b>

**3.10 Allocation of the profit and loss table** (in the Compartment accounting currency)

LYXOR EURO STOXX 50 DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

**3.12 Table of the profit and loss and other characteristic elements of the Compartment during the last 5 fiscal years**

Currency EUR	<b>30.10.2020</b>	31.10.2019	31.10.2018	31.08.2018	31.08.2017
<b>Net assets</b>	<b>65,996,044.40</b>	78,508,344.58	105,770,281.62	111,887,067.03	251,653,021.42
<b>Number of outstanding equities</b>	<b>3,535,815</b>	2,666,008	4,745,187	4,454,469	10,263,941
<b>Net asset value</b>	<b>18.665</b>	29.4479	22.29	25.1179	24.5181
<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-6.92</b>	6.27	-2.83	1.80	6.77

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

<b>Compartment / feeder</b>	LYXOR EURO STOXX 50 DAILY (-1X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

The Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an inverse daily exposure, upwards or downwards, to the European equities market while reproducing the evolution to the EURO STOXX 50<sup>®</sup> Daily Short (gross dividends reinvested) Benchmark Indicator (the “Benchmark indicator”), and while insofar as possible minimising the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### **Benchmark indicator:**

The Benchmark Indicator is the EURO STOXX 50<sup>®</sup> Daily Short strategy index, (gross dividends reinvested, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities) listed in Euros (EUR).

The Benchmark Indicator is a strategy index defined by the supplier of international indices Stoxx Ltd.

The Benchmark Indicator offers a daily inverse exposure, upward or downward, to the evolution of the EURO STOXX 50<sup>®</sup> Total Return (the “Parent Index”). As such, in case of a decline of the Parent Index over a given day, the Compartment’s net asset value will increase over that same day and, in case of an increase of the Parent Index over a given day, the Compartment’s net asset value will drop over that same day and the shareholders will not benefit from any increase of this Parent Index.

The Parent Index consists of the 50 largest securities coming from countries member of the Eurozone. These securities have been selected for their market capitalisation, liquidity and sector-based representativeness. The Parent Index strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Eurozone.

The daily performance of the Benchmark Indicator is equal: to the inverse daily performance of the Parent Index, plus interest collected each day on twice the valuation of the closing price of the Benchmark Indicator and less the costs resulting from the short sale of the securities comprising the EURO STOXX 50<sup>®</sup> index.

The Benchmark Indicator is representative of a strategy of taking short positions on the Parent Index.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and on the respective weights of the Benchmark Indicator components are available on the website: [www.stoxx.com/indices](http://www.stoxx.com/indices).

The monitored performance is that of the closing prices of the Benchmark Indicator.

### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily at closing prices using the official closing price of the exchanges where the constituent stocks are listed.

The Benchmark Indicator's closing price is available on website: [www.stoxx.com/indices](http://www.stoxx.com/indices)

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Stoxx Ltd administrator of the Benchmark Indicator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The composition of the Benchmark Indicator depends on the revision of the Parent Index which occurs annually in September. The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

## **Investment strategy:**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the eligibility and diversification criteria mentioned above, including the list of eligible indices, investors are invited to visit [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will employ over-the-counter index-linked swaps exchanging the value of the assets of the Compartment for the value of the Benchmark Indicator (as described in paragraph 1 above of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

The counterparty of the future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment’s account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment’s assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **- Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are inversely exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis.

The daily readjustment shown in the formula of the underlying “short” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to the inverse performance of the Parent Index. Investors are indeed under-exposed to volatility.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the ETF will have depreciated in total, after these two days (and before deduction of the applicable fees), by 5.5%, while the Parent Index will have appreciated by 4.5% in total.

If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 10.25% over the same period.

Negative scenario 1	Case in which the resulting negative leverage is greater than 1 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-10%	90	x-1
Day 2	-8%	101.2	8%	97.2	x-1
<b>Whole period</b>	<b>1.20%</b>		<b>-2.80%</b>		<b>x-2.33</b>

Negative scenario 2	Case in which the resulting negative leverage is less than 1 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	10%	110	x-1
Day 2	6%	95.4	-6%	103.4	x-1
<b>Whole period</b>	<b>-4.60%</b>		<b>3.40%</b>		<b>x-0.74</b>

Reverse leverage scenario: Case in which the induced leverage is positive over the period					
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
			100		100
Day 1	5%	105	-5%	95	x-1
Day 2	-5%	99.75	5%	99.75	x-1
<b>Whole period</b>	<b>-0.25%</b>		<b>-0.25%</b>		<b>x1</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment’s net asset value will decline even if the Parent Index also posts a decline over this same period.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the European equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation.

To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. "U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment

## Activity report

The fund replicates the performance of the EURO STOXX 50 Daily Short EUR Index (Ticker: SX5TS).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 Daily (-1x) Inverse UCITS ETF - Acc	FR0010424135	EUR	5.85% <sup>(1)</sup>	6.42%		-60.94%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.

The Tracking Error is 0.0364% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** *(not audited by the auditor)*

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
<b>All personnel members</b>	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

**Transparency of securities financing operations and reuse of financial instruments SFTR regulation**  
(Accounting currency of the CIU)

**1. General information.**

**1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.**

Securities lending	
% of loaned assets	-

**1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.**

	Securities lending <sup>(1)</sup>	Securities borrowing <sup>(2)</sup>	Repo operations <sup>(3)</sup>	Reverse repo operations <sup>(4)</sup>	TRS <sup>(5)</sup>
Absolute value	-	-	-	-	196,539,314.81
% of assets under management	-	-	-	-	100.00

<sup>(1)</sup> The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

<sup>(2)</sup> The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

<sup>(3)</sup> The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

<sup>(4)</sup> The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

<sup>(5)</sup> The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

# appendix

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

(1) including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

#### Accounting currency

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>1.88</b>	-14.40	5.53	-7.07	11.07

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

The Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an inverse daily exposure and with a daily x2 leverage, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index (the “Benchmark indicator”), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### **Benchmark indicator:**

The benchmark indicator is the FTSE MIB Daily Super Short Strategy RT Gross TR strategy index, (gross dividends reinvested, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities) listed in Euros.

The Benchmark Indicator is a strategy index defined and maintained by FTSE.

The Benchmark Indicator offers an inverse exposure, adjusted each day, upwards or downwards to the evolution of the Parent Index, with the x2 leverage. As such, in the event of a decrease of the Parent Index on a market day, the Compartment’s net asset value will doubly increase over that same trading day and, in the event of an increase of the Parent Index over a trading day, the Compartment’s net asset value will doubly decline over that trading day and the shareholders will not benefit from the increase of the Parent Index.

The adoption of a short position relative to the Parent Index implies borrowing costs that are part of the method used to calculate the Benchmark Indicator.

As such, the performance of the Benchmark Indicator calculated over a given trading day is equal to twice the inverse performance of the Parent Index on that same trading day, plus the interests (EONIA) collected each day on three times the valuation of the previous closing price of the Benchmark Indicator less the cost of the short position strategy related on that trading day to twice the basket used by the Parent Index.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: <http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of equities comprising the index.

#### **Benchmark indicator publication**

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the website: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Super Short Strategy RT Gross TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the PMC has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

#### **Benchmark indicator revision and composition**

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

The exact composition of the Benchmark Indicator and its revision rules are available on the website: <http://www.ftse.com/products/indexmenu>

#### **Investment strategy:**

##### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The frequency of updating and/or the date of updating of the aforementioned information is also specified on the same page of the aforementioned website. In managing its exposure, up to 20 % of the Compartment's assets may be exposed to equities of any one issuing body.

This 20% limit may be increased to 35% for a single issuing entity where this is justified by exceptional market conditions, such as when certain securities are substantially dominant and/or in the case of high volatility of a financial instrument or securities related to an economic sector represented in the Benchmark Indicator. This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

##### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will be invested primarily in the equities comprising the Benchmark Indicator.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

o Subordination to the main market indices or to the Benchmark Indicator,

- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
  - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
  - o Geographical area,
  - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are inversely and doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any appreciation of the underlying market will be inversely increased and will entail an even stronger depreciation of the Compartment’s net asset value. The daily readjustment of the exposure shown in the formula of the underlying “double short” strategy index implies that, over a period of more than one trading day, the Compartment’s performance will not be equal to twice the opposite of the performance of the Parent Index.

For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the Compartment will be depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the Parent Index will be appreciated by 4.5% in all over the same period.

If the Parent Index depreciates by 5% per day for 2 consecutive trading days, it will have depreciated by a total of 9.75%, while the Compartment will have appreciated (before deduction of the applicable fees) by 21% over the same period.

Negative scenario 1	Case in which the induced negative leverage is greater than 2 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
<b>Whole period</b>	<b>4.50%</b>		<b>-12.00%</b>		<b>x-2.67</b>

Negative scenario 2	Case in which the induced negative leverage is less than 2 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
<b>Whole period</b>	<b>-4.60%</b>		<b>5.60%</b>		<b>x-1.22</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts a decrease over this same period.

Inverted leverage scenario:	Case in which the resulting leverage is positive over the period				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
<b>Whole period</b>	<b>-0.25%</b>		<b>-1.00%</b>		<b>x4</b>

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure (with a x2 leverage) to the upward or downward evolution of the Italian equity market, i.e. of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. "U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

## Activity report

The fund replicates the performance of the FTSE MIB Daily Super Short Strategy RT Gross TR Index (Ticker:FMIBI2X).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-2x) Inverse (Xbear) UCITS ETF – Acc	FR0010446666	EUR	5.33% <sup>(1)</sup>	6.16%		-92.89%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0688% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** *(not audited by the auditor)*

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

**Transparency of securities financing operations and reuse of financial instruments SFTR regulation**

(Accounting currency of the CIU)

**1. General information.**

**1.1. Amount of securities and raw materials loaned in proportion with the total assets that can be loaned, defined as excluding the cash and cash equivalents.**

Securities lending	
% of loaned assets	-

**1.2. Amount of the assets committed to each type of securities financing operation and total return swap, expressed in absolute value (in the currency of the collective investment undertaking) and in proportion with the assets under management of the collective investment undertaking.**

	Securities lending <sup>(1)</sup>	Securities borrowing <sup>(2)</sup>	Repo operations <sup>(3)</sup>	Reverse repo operations <sup>(4)</sup>	TRS <sup>(5)</sup>
Absolute value	-	-	-	-	75,572,096.86
% of assets under management	-	-	-	-	100.00

<sup>(1)</sup> The amount of assets engaged in securities lending transactions corresponds to the market value of the securities lent at the balance sheet date.

<sup>(2)</sup> The amount of assets engaged in securities borrowing transactions corresponds to the market value of the guarantees (cash or securities) delivered by the fund as part of the securities borrowing on the balance sheet date.

<sup>(3)</sup> The amount of assets engaged in repurchase transactions corresponds to the market value of the securities repurchased on the balance sheet date.

<sup>(4)</sup> The amount of assets engaged in reverse repurchase transactions corresponds to the market value of securities purchased under repurchase agreements at the balance sheet date.

<sup>(5)</sup> The amount of assets committed in the TRS corresponds (i) for the TRS for which the management company has undertaken to deliver a basket of securities to the TRS counterparty, to the market value of the basket of securities committed in the TRS, increased by the market value of the TRS on the accounting date and/or (ii) for the TRS for which the management company does not deliver a basket of securities, to the value of the nominal value of the TRS on the balance sheet date.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	GBP	CHF	CAD	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	12,852,876.65	3,292,497.34	3,256,606.92	1,330,018.32
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	0.02	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	12,852,876.65	3,292,497.34	3,256,606.92	1,330,018.32
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	
Future currency exchange operations:	-
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>33,975.37</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	33,975.37
-	-
-	-
-	-
-	-
Other operations	-

LYXOR FTSE MIB DAILY (-2X) INVERSE (XBEAR) UCITS ETF  
(compartment of the Multi Units France Sicav)

### 3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	56,357,335	152,086,548.71	63,817,265	219,963,757.48
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>0.60</b>
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	<b>75,606,072.39</b>

Currency EUR	<b>30.10.2020</b>	31.10.2019	31.10.2018	29.09.2017	30.09.2016
<b>Net assets</b>	<b>75,572,096.86</b>	91,900,620.25	90,276,552.50	124,176,705.35	94,542,488.09
<b>Number of outstanding equities</b>	<b>26,559,367</b>	34,019,297	19,553,298	31,713,177	10,621,351
<b>Net asset value</b>	<b>2.8454</b>	2.7014	4.6169	3.9156	8.9011
<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>2.83</b>	-1.32	2.32	-7.61	4.32

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

Equities from countries of the Eurozone.

At least 60% of the Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several Eurozone countries, possibly including the French market.

The Compartment is an index-based UCITS of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an exposure with a daily x2 leverage, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index (the “Benchmark Indicator”) (net dividends reinvested), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### **Benchmark indicator:**

The benchmark indicator is the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR strategy index, (net dividends reinvested, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities) listed in Euros (EUR).

The Benchmark Indicator is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Indicator is a strategy index that reflects the evolution of the FTSE MIB Net Total Return index (the "Parent Index") with a daily leverage effect of x2. The daily performance of the Benchmark Index is equal to twice the daily performance of the Parent Index, less the borrowing costs required to obtain the 2x leverage. Thus, when the Parent Index increased by 2% on a trading day, the Reference Index increased by 4% on the same trading day, less borrowing costs. Conversely, in the event of a 2% decrease in the Parent Index on a trading day, the Benchmark Index decreases by 4% on the same trading day, less borrowing costs.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: <http://www.ftse.com/products/indexmenu>

The methodology for calculating the FTSE MIB Net Net Total Return Index is published on the website: <http://www.ftse.com/products/indexmenu>. The monitored performance is that of the closing prices of equities comprising the index.

### **Benchmark indicator publication**

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed.

The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published. The Benchmark Indicator's closing price is available on the website: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

### **Benchmark indicator revision and composition**

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The exact composition of the Parent Index and the revision rules of its composition and incidentally of the Benchmark Indicator published by Euronext are available on the website: <http://www.ftse.com/products/indexmenu>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Advantages of the "leverage" strategy**

The "Leverage" strategy (with a daily leverage effect) is a dynamic strategy that is applied to the Benchmark Indicator. By borrowing securities to carry out the strategy, it enables investors to double the effect of their investment, on a daily basis, in comparison with a "single" investment in the Parent Index. If the Benchmark Index rises, the gains on a given trading day are twice as much as obtained with a "single" investment in the Parent Index. Conversely, in case of a bear market, the loss will be twice as much, on a daily basis, due to the multiplier effect of the leverage. This daily multiplier effect also applies to the risks of this strategy.

## **Investment strategy:**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website [www.lyxoretf.com](http://www.lyxoretf.com).

The frequency of updating and/or the date of updating of the aforementioned information is also specified on the same page of the aforementioned website. In managing its exposure, up to 20 % of the Compartment's assets may be exposed to equities of any one issuing body.

This 20% limit may be increased to 35% for a single issuing entity where this is justified by exceptional market conditions, such as when certain securities are substantially dominant and/or in the case of high volatility of a financial instrument or securities related to an economic sector represented in the Benchmark Indicator.

This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),
- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

- of diversification, notably:

- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

The equities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be that the market value of future exchange contract described hereinafter be lower or equal to nil, what will lead to the neutralisation of the counterparty risk resulting from the exchange contract.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

## **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by Fund investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

**Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

**Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

**- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

**- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**- Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are doubly exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis. In particular, any depreciation of the underlying market will be increased and will entail an even stronger depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "leveraged" strategy index implies that, over a period of more than one trading day, the Compartment's performance will not be equal to twice the performance of the Parent Index. For example, if the Parent Index appreciates by 10% on one trading day then depreciates by 5% on the next trading day, the Compartment will be depreciated in all, after these two days (and before deduction of the applicable fees), by 8%, while the Parent Index will be appreciated by 4.5% in all over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the Compartment will have appreciated (before deduction of the applicable fees) by 19% over the same period.

Negative scenario 1	Case in which the induced leverage is greater than 2 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	20%	120	x2
Day 2	-11%	97.9	-22%	93.6	x2
<b>Whole period</b>	<b>-2.10%</b>		<b>-6.40%</b>		<b>x3.05</b>

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

Negative scenario	Case in which the induced leverage is less than 2 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-5%	95	-10%	90	x2
Day 2	6%	100.7	12%	100.8	x2
<b>Whole period</b>	<b>0.70%</b>		<b>0.80%</b>		<b>x1.14</b>

Moreover, it is possible that over an observation period of more than one day and in case of strong volatility of the Parent Index over this period, the Compartment's net asset value will decline even if the Parent Index also posts an increase over this same period.

Inverted leverage scenario:	Case in which the resulting leverage is negative over the period				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	20%	120	40%	140	x2
Day 2	-16%	100.8	-32%	95.2	x2
<b>Whole period</b>	<b>0.80%</b>		<b>-4.80%</b>		<b>x-6</b>

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the upward or downward evolution of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The recommended minimum investment period is at least 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

## Activity report

The fund replicates the performance of the FTSE MIB Daily Leveraged RT Net-of-Tax (Lux) TR Index (Ticker:FMIBL2X).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (2x) Leveraged UCITS ETF – Dist	FR0010446658	EUR	-44.03% <sup>(1)</sup>	-43.59%		-79.88%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.3198% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

• Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2e</sub> / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

• Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

• Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%  
Orange Flag 24%  
Yellow Flag 18%  
Green Flag 55%

267	237	259	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	20%
Thermal Coal	0%
Natural Gaz	20%
Oil	20%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0041
Oil (MMBOE)	0.0044

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	1 878.0
Gas	1 318.8
Total	3 196.5

**LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF**  
(compartment of the Multi Units France Sicav)

### Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	3 196.6

### Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.9%	0.0%	6.6%
Some efforts	84.9%	89.8%	50.2%
Limited efforts/information	6.1%	5.2%	19.3%
No effort/No evidence	5.0%	5.0%	23.8%

### Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

21.5%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	25.4%
Liquid Fuel	8.5%
Natural Gas	26.1%
Nuclear	10.1%
Renewables	14.8%
Thermal Coal	15.1%

### Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	34%
20-49.9%	1%
50-100%	0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR FTSE MIB DAILY (2X) LEVERAGED UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

**Lyxor's best selection and execution policy**

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

#### Accounting currency

The Compartment accounting is carried out in Euro.

**3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items**

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	JPY	GBP	AUD	Other currencies
<b>Assets</b>				
Deposits	28,094,161.17	18,233,995.06	4,219,767.80	3,693,119.90
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	28,094,161.17	18,233,995.06	4,219,767.80	3,693,119.90
Debts	-	-	-	-
Financial accounts	0.01	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

**3.5 Receivables and Debts: breakdown by type**

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	
Future currency exchange operations:	-
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
-	-
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>64,641.05</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Accrued expenses	64,641.05
-	-
-	-
-	-

(compartment of the Multi Units France Sicav)

### 3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	36,186,109	168,173,907.46	27,626,647	144,348,362.45
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>0.60</b>
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees .....	<b>None</b>
3.8.2 Description of the other commitments received and/or given .....	<b>None</b>

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	-
- Swaps	<b>113,781,697.56</b>

<b>Net asset value</b>	<b>4.2554</b>	7.8716	5.8168	8.6964	4.7208
<b>Unit distribution on capital gains and losses (including advances)</b>	<b>0.18</b>	-	-	-	-
<b>Unit distribution (including advances)</b>	-	0.57	0.53	0.45	0.44
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-0.61</b>	-	5.78	2.31	-2.82

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR FTSE MIB DAILY (-1X) INVERSE (BEAR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

The Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF Compartment (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to obtain an inverse daily exposure, upwards or downwards, to the Italian equity market while reproducing the FTSE MIB Daily Short Strategy RT Gross TR strategy index (the “Benchmark indicator”) (net dividend reinvested), whatever its evolution, and while insofar as possible minimising the tracking error between the Compartment’s performances and those of its Benchmark Indicator.

The anticipated level of the ex-post tracking error under the normal market conditions is 1%.

### **Benchmark indicator:**

The benchmark indicator is the FTSE MIB Daily Short Strategy RT Gross TR strategy index, (gross dividends reinvested, which means that the Benchmark Indicator’s performance includes the gross dividends paid by its underlying equities) listed in Euros (EUR) (the “Benchmark Indicator”).

The Benchmark Indicator is a strategy index defined and maintained by FTSE and Borsa Italiana Spa.

The Benchmark Indicator offers an inverse exposure, adjusted each day, upwards or downwards to the evolution of the Parent Index. As such, in the event of a decline of the Parent Index, the Compartment’s net asset value will increase over that same day and, in the event of an increase of the Parent Index, the Compartment’s net asset value will decline over that same day and the shareholders will not benefit from the increase of the Parent Index.

The adoption of a short position relative to the Parent Index implies borrowing costs that are part of the method used to calculate the Benchmark Indicator.

As such, the performance of the Benchmark Indicator over a given market day is equal to the inverse performance of the Parent Index over that same market day, plus the interests (EONIA) collected each day on twice the valuation of the previous closing price of the Benchmark Indicator less the cost of the short position strategy as compared, on that market day, to the basket used by the FTSE MIB index.

The Parent Index is an index that is weighted by floating market capitalisation, which measures the evolution of 40 of the largest securities listed on the Borsa Italiana.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: <http://www.ftse.com/products/indexmenu>

The monitored performance is that of the closing prices of the Benchmark Indicator, in Euros.

### **Benchmark indicator publication**

The Benchmark Indicator is calculated on a daily basis at closing prices using the official closing market prices of the stock exchanges where the constituent stocks are listed. The Benchmark indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the website: <http://www.ftse.com/products/indexmenu>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE MIB Daily Short Strategy RT Gross TR benchmark index is registered in the register of directors and benchmark indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the PMC has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The revision of the Benchmark Indicator's composition depends on the revision of its Parent Index's composition. The composition of the Parent Index is revised quarterly.

The leverage in the Benchmark Indicator computation formula undergoes a daily readjustment. The consequences related to the daily readjustment of the leverage are detailed, for instance, in the Benchmark Indicator and Risk profile sections of the prospectus.

The exact composition of the Benchmark Indicator and its revision rules published by Euronext are available on the website: <http://www.ftse.com/products/indexmenu>. The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

## **Investment strategy:**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity.

This 20% limit may be increased to 35% for a single issuing entity where this is justified by exceptional market conditions, such as when certain securities are substantially dominant and/or in the case of high volatility of a financial instrument or securities related to an economic sector represented in the Benchmark Indicator. This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

- o Subordination to the main market indices or to the Benchmark Indicator,
- o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation),

- o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
- o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code),
- o Geographical area,
- o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Liquidity risk on a place of listing**

The Compartment’s equity price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk of daily readjustment of the leverage**

Investors are inversely exposed to the fluctuations affecting the price or level of the Parent Index on a daily basis.

The daily readjustment of the exposure shown in the formula of the underlying “short” strategy index implies that, over a period of more than one business day, the Compartment’s performance will not be equal to the opposite of the performance of the Parent Index. For example, if the Parent Index appreciates by 10% on one business day then depreciates by 5% on the next business day, the ETF will be depreciated in all, after these two days (and before deduction of the applicable fees), by 5,5%, while the Parent Index will be appreciated by 4.5% in all over the same period. If the Parent Index depreciates by 5% per day for 2 consecutive business days, it will have depreciated by a total of 9.75%, while the ETF will have appreciated (before deduction of the applicable fees) by 10,25% over the same period.

Negative scenario 1	Case in which the induced negative leverage is greater than 1 within the scenario of an increase of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-10%	90	x-1
Day 2	-8%	101.2	8%	97.2	x-1
<b>Whole period</b>	<b>1.20%</b>		<b>-2.80%</b>		<b>x-2.33</b>

Negative scenario 2	Case in which the induced negative leverage is less than 1 within the scenario of a decline of the Parent Index				
	Parent Index		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an inverse exposure to the upward or downward evolution of the Italian equity market, i.e. of 40 of the largest securities listed on the Borsa Italiana.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. “U.S. Persons” (as defined in the prospectus - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

## Activity report

The fund replicates the performance of the FTSE MIB Daily Short Strategy RT Gross TR Index (Ticker:FMIB11X).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB Daily (-1x) Inverse (Bear) UCITS ETF - Acc	FR0010446146	EUR	7.71% <sup>(1)</sup>	8.56%		-60.28%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0333% for the sub-fund. The Tracking Error target for the year was 1%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
<b>All personnel members</b>	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the fixing WM Reuters on the day of the Compartment's net asset value date.

#### **Posting method for the negotiation fees**

The chosen method is that of excluded fees.

#### **Posting method of incomes from fixed income securities**

The chosen method is that of the coupon received.

#### **Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above

#### **Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### **Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule rate</b>
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

#### **Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

<b>Compartment / feeder</b>	LYXOR BUND DAILY (-2X) INVERSE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

The Compartment Lyxor Bund Daily (-2x) Inverse UCITS ETF (the “Compartment”) is an index-based UCITS of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The management objective of the Compartment is to be inversely exposed with a daily x2 leverage, upwards or downwards, to the daily performance of the market for German government bonds with residual maturities of 8.5 to 10.5 years while reproducing the evolution of the Solactive Bund Daily (-2x) Inverse Index (the “Benchmark Indicator”) listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### Benchmark indicator

The Benchmark Indicator is a strategy index developed by Solactive AG, using a proprietary methodology. It is calculated and maintained by Solactive AG.

The Benchmark Indicator offers reverse exposure, with a daily leverage effect x2, to the rise or fall in the trend the market for German government bonds with residual maturities of 8.5 to 10.5 years, of which Euro-Bund futures contracts are an indicator representative, with daily x2 leverage. Thus, in the event of a fall in the Euro-Bund over a day, the net asset value of the Compartment will increase double on the same day and, in the event of a rise in the Euro-Bund, the daily net asset value of the Compartment will decrease doubling and shareholders will not benefit from the rise in the Euro-Bund. Euro-Bund futures are a representative indicator of the German government bond market with residual maturities between 8.5 and 10.5 years, quoted on Eurex, and whose methodology is available on: [www.eurexchange.com](http://www.eurexchange.com).

The daily performance of the Benchmark Indicator is equal to the inverse of twice the daily performance of the Euro-Bund futures, cumulated with the interest (at the reference rate) received daily on the valuation of the previous day's fixing of the Benchmark Indicator.

It is therefore an index that represents a short selling strategy with an amplifying x2 leverage on the Euro-Bund futures with daily rebalancing. An additional rebalancing may be carried out during the session if the Benchmark Indicator drops by more than 40% during a business day (i.e. if the variation of the daily price of the Bund future, in absolute value, is greater than 20%).

The performance tracked is that of the Benchmark Indicator’s closing fixing in Euros.

As the Benchmark Indicator's calculation methodology is not based on a direct exposure to the German government bonds but on indirect investment in futures, the Compartment's performance will be impacted by the cost related to the roll of the aforesaid futures on a quarterly basis.

This phenomenon could negatively and progressively impact, potentially in a significant manner, the gap between the Compartment's performance and the gross performance of the short positions on the underlyings of the aforesaid futures, notably in case of long-term investment in the Compartment's equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition of the Benchmark Indicator are available on the website: <https://www.solactive.com>.

#### **Benchmark indicator revision and composition**

The Benchmark Indicator is revised daily.

The frequency of this adjustment could have an impact on the Compartment's costs and could therefore diminish its performance.

#### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily on the official closing fixing of Euro-Bund futures at 5:15 pm.

The Benchmark Indicator fixing is available on the website: <https://www.solactive.com>.

Pursuant to Article 34 of European Parliament and Council Regulation (EU) 2016/1011 of 8 June 2016, Solactive AG, the administrator of the Solactive 10Y US Treasury Futures Daily (-2x) Inverse Index, is registered in ESMA's register of benchmark index administrators.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmarks used which describes the measures to be implemented in the event of substantial changes to an index or the cessation of provision of that index.

### **Investment strategy:**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other securities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD non-member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities issued by a single issuing State can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The aforesaid securities must be financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

In the present case, the manager intends to primarily use the following assets:

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, securities of the Eurozone (from all economic sectors, listed on all markets), including the small capitalisation markets.

**The aforementioned equities will be bonds chosen on the basis of criteria:**

Of eligibility, in particular:

- Senior debt;
- Fixed maturity;
- Maximum residual maturity;
- Minimum issuing amount;
- Requirement of a minimal threshold in S&P rating or equivalent.

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

## **4. Securities with integrated derivatives**

None.

## **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

## **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

## **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

## **8. Financial guarantees**

In all cases where the investment strategy employed involves a counterparty risk for the Compartment, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

## **Policy related to discounts**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

#### Reinvestment of received guarantees

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- Placed as a deposit to an approved institution;
- Invested in government bonds of highest grade;
- Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### Counterparty selection policy

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Interest rate risk**

The price of a bond can be affected by unexpected fluctuations of interest rates, which can themselves notably affect yield curves. The bonds included in the composition of the Benchmark Indicator are therefore exposed to such fluctuating interest rates. In general, a bond's price increases when interest rates drop, while this price will drop when those of interest rates rise.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected.

Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**Risks related to collateral management**

**Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**Risk of daily readjustment of the leverage (double short)**

Investors are inversely and doubly exposed to the fluctuations affecting each day the price or level of the futures on the Bund underlying the Benchmark Indicator. In particular, any appreciation of the underlying market will be inversely amplified and will entail an even higher depreciation of the Compartment's net asset value. The daily readjustment of the exposure shown in the formula of the underlying "double short" Benchmark Indicator implies that, over a period of more than one business day, the Compartment's performance will not be equal to the double of the opposite of the performance of the futures on the Bund underlying the Benchmark Indicator. Indeed, investors are underexposed to the volatility.

For example, if the futures on the Bund underlying the Benchmark Indicator appreciate by 10% over one trading day and then depreciate by 5% on the next business day, the ETF will have depreciated in all, after these two days (and before deduction of the applicable fees), by 12%, while the futures on the Bund underlying the Benchmark Indicator will have appreciated by 4.5% over the same period.

Should the futures on the Bund underlying the Benchmark Indicator decline by 10% on a given business day and then increase by 6% on the next day, the ETF will increase by a total of 5.60% after these two days (and before deduction of the applicable expenses), while the futures on the Bund underlying the Benchmark Indicator will have declined by 4.60% over the same period.

Also, should the futures on the Bund underlying the Benchmark Indicator increase by 5% on a given business day and then decline by 5% on the next day, the ETF will decline by a total of 1% after these two days (and before deduction of the applicable expenses), while the futures on the Bund underlying the Benchmark Indicator will have declined as well, by only 0.25% over the same period.

LYXOR BUND DAILY (-2X) INVERSE UCITS ETF  
(compartment of the Multi Units France Sicav)

**Negative scenario 1**

Case in which the resulting negative leverage is greater than 2 within the scenario of an increase of the Benchmark Indicator's underlying.

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	10%	110	-20%	80	x-2
Day 2	-5%	104.5	10%	88	x-2
<b>Whole period</b>	<b>4.50%</b>		<b>-12.00%</b>		<b>x-2.67</b>

**Negative scenario 2**

Case in which the resulting negative leverage is less than 2 within the scenario of a decrease of the Benchmark Indicator's underlying.

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	-10%	90	20%	120	x-2
Day 2	6%	95.4	-12%	105.6	x-2
<b>Whole period</b>	<b>-4.60%</b>		<b>5.60%</b>		<b>x-1.22</b>

Moreover, it is possible that over an observation period of more than one day, and in case of strong volatility of the Benchmark Indicator's underlyings over this period, the Compartment's net asset value will decline even if the Benchmark Indicator's underlyings also show a decline over this same period.

**Inverted leverage scenario:**

Case in which the resulting leverage is positive over the period

	Underlying of the Benchmark Indicator		Strategy index		Induced leverage
	Day i performance	Day i value	Day i performance	Day i value	
		100		100	
Day 1	5%	105	-10%	90	x-2
Day 2	-5%	99.75	10%	99	x-2
<b>Whole period</b>	<b>-0.25%</b>		<b>-1.00%</b>		<b>x4</b>

**Risk of future roll**

As the Benchmark Indicator is made of futures contracts on German government bonds (BUND), a quarterly roll of position on futures is required to maintain the exposure at the same level: the roll of future contracts consists in the transfer of a position on futures with a close maturity (in all cases before the term of future contracts) on futures with a longer maturity.

The investor is exposed to a loss or gain risk during futures rolls. In some configuration of the market, this phenomenon could lead to an automatic loss during quarterly rolls and, by this way, impact unfavourably, gradually and significantly the difference between Compartment's performance and the gross performance of short positions on underlyings of abovementioned futures, in particular, in case of a long-term investment in the Compartment shares.

**Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the index, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI

**Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the index" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the Benchmark Indicator is incapable of providing the level or value of the said index,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

### **Subscribers concerned and typical investor profile**

The Compartment is open to any subscriber.

The investor who subscribes to this Compartment wishes to gain inverse exposure, both upwards and downwards, with a daily leverage amplification of 2, to the performance of the market for German government bonds with residual maturities of 8.5 to 10.5 years.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

As an arbitration product, this Compartment could not be suitable to investors who wish to make a mid- or long-term investment. "U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

## Activity report

The fund replicates the performance of the Solactive Bund Daily (-2x) Inverse Index EUR (Ticker:SODI2BUN).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Bund Daily (-2x) Inverse UCITS ETF - Acc	FR0010869578	EUR	-7.22% <sup>(1)</sup>	-6.84%		-73.72%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0028% for the sub-fund. The Tracking Error target for the year was 0.5%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

Measuring the GHG emissions of its investments is seen as a first step. This will provide investors with an indication of their current financed emissions.

After carefully analyzing the Indicators and data available to take into account and measure the transition risks that climate change poses to Issuers, Lyxor will not report on those matters at this time. We will work with our external providers in order to enhance our knowledge to report and better reflect the risk of transition in the coming years.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
<b>All personnel members</b>	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

**Transparency of securities financing operations and reuse of financial instruments SFTR regulation**

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the WM Reuters on the same day of the Compartment's net asset value date.

# appendix

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company. For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Commissions received for temporary securities acquisitions and sales operations.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company (1)	Net assets	maximum 0.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

#### Accounting currency

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

# appendix

Lyxor Bund Daily (-2x) Inverse UCITS ETF is a Compartment under French law approved by the AMF. The Compartment prospectus is available on the website: [www.lyxoretf.com](http://www.lyxoretf.com) or by simple request to the Management Company.

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by Solactive AG. Solactive AG grant no guarantee and undertake no commitment, whether explicitly or implicitly, relative to the results to be obtained through the use of the Benchmark Indicator and/or the Benchmark Indicator Mark and/or relative to the level at which the said Benchmark Indicator may be at any given moment or day, or of any other type. The Benchmark Indicator is calculated and published by Solactive AG. Solactive AG makes every effort to ensure that the Reference Indicator is calculated correctly. Regardless of its obligations towards the issuer, Solactive AG is under no obligation to report errors affecting the Benchmark Index to third parties, including investors or financial intermediaries of the Compartment. Neither the publication of the Benchmark Index by Solactive AG, nor the licensing of the Benchmark Index or its mark in connection with the Compartment constitutes a recommendation by Solactive AG to invest in the Compartment's shares and in no way represents a guarantee or opinion of Solactive AG of an investment in the Compartment's shares. ### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	-	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>4,252,967.16</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Account receivable	2,790,127.66
Deferred settlements sales	1,462,839.50
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>4,297,315.67</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Deferred settlements purchases	3,536,198.79
Account payable	716,768.37
Accrued expenses	44,348.51
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

	<b>Subscriptions</b>		<b>Redemptions</b>	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year	1,062,000	28,949,799.10	10,745,500	303,600,312.95
Subscription / redemption commission		-		-
Retrocessions		-		-
Commissions acquired by the Compartment		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>0.20</b>
Performance commissions (variable fees): amount of costs for the year	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Commitments given and received

3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees .....	<b>None</b>
3.8.2 Description of the other commitments received and/or given .....	<b>None</b>

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments sold under forward repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial estimates given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
-CIU securities	-
- Swaps	<b>-92,032.42</b>

<b>Net asset value</b>	<b>26.284</b>	28.3279	33.7471	33.6326	35.8442
<b>Unit distribution on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)</b>	-	-	-	-	-
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-2.42</b>	-4.98	0.33	-1.99	-1.50

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding units on that date.

<sup>(2)</sup> The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

Compartment creation date: 6 September 2018.

annuel**

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR FTSE MIB UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartments / feeder</b>	LYXOR FTSE MIB UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification**

Equities of Eurozone countries.

At least 60% of the Lyxor FTSE MIB UCITS ETF Compartment (the “Compartment”) is continuously exposed in one or several markets of equities issued in one or several Eurozone countries including the French market.

The Compartment is an UCITS ETF type index fund.

### **Terms of determination and allocation of amounts available for distribution**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### **Management objective**

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upwards or downwards evolution of the FTSE MIB™ Net Total Return index (net dividends reinvested) (“Benchmark Indicator”) listed in euros while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### **Benchmark Indicator**

The Benchmark Indicator measures the performance of 40 equities listed in the market organised and operated by the Italian stock exchange and aims at replicating the sectorial breakdown of the Italian national market.

The Benchmark Indicator is a Net Total Return index which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities.

The composition of the Benchmark Indicator is determined on the basis of three criteria: the free-float, the liquidity and the representativeness of the main market segments according to the ICS (Industry Classification Standard) classification.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the website: <http://www.ftse.com>

The monitored performance is that of the closing prices of the Benchmark Indicator.

### **Benchmark indicator publication**

The Benchmark Indicator’s closing price is available on the FTSE website: <http://www.ftse.com>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the FTSE International Limited director of the FTSE Reference Index MIB™ Net Total Return is registered in the register of directors and reference indices maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the PMC has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

#### **Benchmark indicator revision and composition**

The Benchmark Indicator is reviewed quarterly.

The exact composition and rules for Benchmark Indicator revision, published by Euronext, are available on the website: <http://www.ftse.com>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Investment strategy**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities in the Compartment's assets will notably be securities making up the Benchmark Indicator, as well as other European equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

#### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

#### **The aforementioned equities will be chosen on the basis of criteria:**

##### Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent);

##### Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

As part of a future optimisation of the Compartment’s management, the financial manager by delegation reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment’s account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment’s assets. In the event of default by the counterparty, the COMPARTMENT may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the COMPARTMENT as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Funds may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

#### **Policy related to discounts**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

#### **Reinvestment of received guarantees**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs").

It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

#### **Risks related to collateral management**

##### **Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

##### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

#### **Risk that the management objective may only be partially reached**

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

##### **Risk related to the use of derivative instruments**

In order to reach its investment objective, the Compartment uses future financial instrument (“FFI”) negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment’s net asset value.

##### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment’s manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

##### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment’s underlyings can affect the Compartment’s tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment’s net asset value may be affected.

##### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

##### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment’s underlyings, the Compartment’s net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

##### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment’s net asset value can also be affected.

If the event persists, the Compartment’s manager will decide on measures having to be adopted, which can have an impact on the Compartment’s net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,

- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

**Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the Italian equities market.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 3 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 20 September 2018.*

# Activity report

The Fund replicates the performance of the FTSE MIB Net TR EUR Index (Ticker:FTSEMIBN).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor FTSE MIB UCITS ETF - Dist	FR0010010827	EUR	-19.447% <sup>(1)</sup>	-19.57%		13.39%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0823% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR FTSE MIB UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR FTSE MIB UCITS ETF  
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2020

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.  
All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%  
Orange Flag 24%  
Yellow Flag 18%  
Green Flag 55%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
<b>134</b>	<b>237</b>	<b>259</b>	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	94%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)\*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	20%
Thermal Coal	0%
Natural Gaz	20%
Oil	20%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0020
Oil (MMBOE)	0.0022

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	939.0
Gas	659.3
Total	1 598.3

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/SM Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	1 598.3

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.9%	0.0%	8.6%
Some efforts	84.9%	89.8%	50.2%
Limited efforts/information	6.1%	5.2%	19.3%
No effort/No evidence	5.0%	5.0%	23.8%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	21.5%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	25.4%
Liquid Fuel	8.5%
Natural Gas	26.1%
Nuclear	10.1%
Renewables	14.8%
Thermal Coal	15.1%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	34%
20-49.9%	1%
50-100%	0%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	25.5%
Energy Efficiency	17.7%
Green Building	0.0%
Pollution Prevention	6.2%
Sustainable Water	3.0%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	2.2%
Energy Efficiency	1.0%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.5%	93.5%	3.9%	61.3%	25.1%	13.6%
Carbon Emissions	5.3%	76.0%	18.7%	76.8%	16.9%	6.3%
Electronic Waste	8.3%	11.7%	80.0%	99.7%		0.3%
Opportunities in Green Building	5.3%	76.6%	18.2%	100.0%	0.0%	
Opp's in Renewable Energy	6.8%	48.5%	44.8%	89.0%	6.7%	4.3%
Packaging Material & Waste	13.0%	18.4%	68.6%	97.7%		2.3%
Water Stress	7.9%	28.7%	63.4%	52.6%	40.3%	7.1%
Toxic Emissions & Waste				47.0%	28.9%	24.1%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR FTSE MIB UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the delegated financial manager when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management fees and administrative fees external to the management company including tax <sup>(1)</sup>	Net assets	maximum 0.35% per year including tax
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in euros (EUR).

appendix

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

<b>Net asset value</b>	<b>17.3295</b>	21.9592	18.5502	23.5107	20.2646
<b>Distribution per unit on capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Distribution per unit (including advances)</b>	<b>0.33</b>	0.87	0.66	0.07	0.68
<b>Unit tax credit transferred to unit holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation <sup>(2)</sup></b>	<b>-2.04</b>	-	3.69	4.07	0.46

<sup>(1)</sup>In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

<sup>(2)</sup>The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 20 September 2018.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR IBEX 35 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR IBEX 35 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

Equities from countries of the Eurozone.

At all times, the Lyxor IBEX 35 (DR) UCITS ETF Compartment (the “Compartment”) is 60% exposed to at least one or several equity market(s) issued in one or several country/countries of the Eurozone, possibly including the French market. The Compartment is index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upward or downward evolution of the IBEX 35 Net Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in euros and the main Spanish stock market index, while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.20%.

### **Benchmark indicator:**

The Benchmark Indicator is an equities index calculated and published by the Sociedad de Bolsas.

The Benchmark Indicator includes 35 Spanish equities selected according to a liquidity criterion.

The Benchmark Indicator is a Net Return index which means that the Benchmark Indicator’s performance includes the net dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: <http://www.bolsamadrid.es>

The monitored performance is that of the closing prices of the Benchmark Indicator.

### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily at the closing price using the official closing prices of the exchanges where the index constituents are listed. The Benchmark Indicator is also calculated in real time on each day belonging to the publication calendar of the Benchmark Indicator.

The Benchmark Indicator is available in real-time via Reuters and Bloomberg.

The Benchmark Indicator’s closing price is available on the website: <http://www.bolsamadrid.es>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator Sociedad de Bolsas of the Benchmark Indicator is registered on the Register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

#### **Benchmark indicator revision and composition**

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and rules for Benchmark Indicator revision, published by Sociedad de Bolsas, are available on the website: <http://www.bolsamadrid.es>.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

#### **Investment strategy:**

##### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In the pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method which means that the Compartment will invest in a basket of balance sheet securities making up the Benchmark Indicator.

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations under the conditions set out below.

On an ancillary basis, and once again to ensure the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into contracts involving Future Financial Instruments (“FFI”). Such contracts entered into in this context may involve index futures and/or hedge swaps and in particular to minimize the Compartment’s tracking error.

In order to enable investors to benefit from transparency as to the direct replication method used (i.e. full replication of the Benchmark Indicator) and as to the consequences of this method on the Compartment’s assets, investors may find updated information on the composition of the basket of balance sheet assets held in the Compartment’s portfolio on the page dedicated to the Compartment at [www.lyxoretf.com](http://www.lyxoretf.com). The frequency of any updates and/or the date on which the aforementioned information is updated are also indicated on this page.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

At all times, the Compartment will invest at least 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the agreement on the European Economic Area and that has signed, with France, a tax convention that includes an administrative assistance clause for the purpose of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

In the present case, the manager intends to use primarily the following assets:

##### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will be primarily invested in the equities making up the Benchmark Indicator.

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 25% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 20% of the assets under management.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the "Agent"). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent. Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments:

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.
- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.
- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment's annual report.
- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

### **8. Financial guarantees**

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organisation to which one or more Member States belong;
- and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;

(iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for Future Financial Instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Liquidity risk on a place of listing**

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risk related to the use of effective portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment’s manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment’s underlyings can affect the Compartment’s tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment’s net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment’s underlyings, the Compartment’s net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment’s net asset value can also be affected.

If the event persists, the Compartment’s manager will decide on measures having to be adopted, which can have an impact on the Compartment’s net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,

- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Risk related to the use of derivative instruments**

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

**Subscribers concerned and typical investor profile:**

The Compartment is "open to any subscriber".

The investor that subscribes this Compartment wishes to find exposure to the Spanish zone equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France mutual fund: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2013.*

# Activity report

The fund replicates the performance of the IBEX 35 Net Return EUR Index (Ticker:IBEXNR).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor IBEX 35 (DR) UCITS ETF - Dist	FR0010251744	EUR	-28.19% <sup>(1)</sup>	-28.42%		-7.89%
Lyxor IBEX 35 (DR) UCITS ETF - Acc	FR0012205672	EUR	-30.84% <sup>(1)</sup>	-30.98%		-30.84%

<sup>(1)</sup> «The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques»

The Tracking Error is 0.1998% for the sub-fund. The Tracking Error target for the year was 0.2%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-18-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.

- MSCI and Sustainalytics ESG research to integrate ESG issues.

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2\*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2e</sub> / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

LYXOR IBEX 35 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR IBEX 35 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 37%  
Yellow Flag 25%  
Green Flag 37%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
133	368	245	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	91%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	5%
Thermal Coal	0%
Natural Gaz	4%
Oil	3%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0009
Oil (MMBOE)	0.0004

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	119.7
Thermal Coal	0.0
Oil	156.9
Gas	294.1
Total	570.7

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	570.7

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	20.5%	0.0%	1.8%
Some efforts	73.8%	99.4%	86.3%
Limited efforts/information	2.1%	0.0%	6.7%
No effort/No evidence	1.2%	0.0%	5.2%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	28.1%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	11.7%
Liquid Fuel	0.1%
Natural Gas	42.2%
Nuclear	19.1%
Renewables	24.7%
Thermal Coal	2.2%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	38%
20-49.9%	3%
50-100%	5%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	40.4%
Energy Efficiency	43.4%
Green Building	4.1%
Pollution Prevention	4.1%
Sustainable Water	6.8%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	6.0%
Energy Efficiency	1.9%
Green Building	1.2%
Pollution Prevention	0.0%
Sustainable Water	0.4%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment

Toxic Emissions & Waste				57.9%	34.4%	7.7%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	39
Number of Voted Meetings	26
Participation rate at General Meetings	66.7%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	98.9%	1.1%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Directors Related	92.4%	7.6%	0.0%
Non-Salary Comp.	81.5%	15.4%	3.1%
Reorg. and Mergers	75.0%	25.0%	0.0%
Capitalization	77.1%	22.9%	0.0%
Antitakeover Related	100.0%	0.0%	0.0%

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor IBEX 35 (DR) UCITS ETF fund participated during the financial year.

Spain	96.2%
Luxembourg	3.8%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## 1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.30% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company; 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in euros.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equities:** Capitalisation of all the amounts available for distribution.

### 3. Information supplements

#### 3.1 Financial instruments: breakdown by the instrument's legal or economic type

##### 3.1.1 Breakdown of the "Bonds and similar securities" item by instrument type

	Negotiated on a regulated or similar market	Not negotiated on a regulated or similar market
Indexed bonds	-	-
Convertible bonds	-	-
Fixed-rate bonds	-	-
Variable-rate bonds	-	-
Zero coupon bonds	-	-
Equity interests	-	-
Other instruments	-	-

##### 3.1.2 Breakdown of the "Debt instruments" item by legal or economic instrument type

	Negotiated on a regulated or similar market	Not negotiated on a regulated or similar market
Treasury Bonds	-	-
Negotiable EUropean Commercial Paper (NEU CP) issued by non-financial issuers	-	-
Negotiable EUropean Commercial Paper (NEU CP) issued by bank issuers	-	-
Negotiable EUropean Medium Term Note (NEU MTN)	-	-
Other instruments	-	-

##### 3.1.3 Breakdown of the "Sale operations on financial instruments" item by instrument type

	Securities received in pension sold	Securities borrowed sold	Securities acquired with redemption right sold	Short sales
Equities	-	-	-	-
Bonds	-	-	-	-
Debt securities	-	-	-	-
Other instruments	-	-	-	-

LYXOR IBEX 35 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

3.1.4 Breakdown of the off-balance sheet headings by market type (notably rates, equities)

	Rate	Equities	Exchange	Other
<b>Hedging operations</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-
<b>Other operations</b>				
Commitments on regulated or similar markets	-	5,021,874.00	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-

3.2 Breakdown by rate types of the asset, liability and off-balance sheet items

	Fixed rate	Variable rate	Revisable rate	Other
<b>Assets</b>				
Deposits	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	38,177.51
<b>Liabilities</b>				
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	3,394,401.13
<b>Off-balance sheet</b>				
Hedging operations	-	-	-	-
Other operations	-	-	-	-

3.3 Breakdown by residual maturity of the asset, liability and off-balance sheet items

	0-3 months	3 months - 1 year	1-3 years	3-5 years	>5 years
<b>Assets</b>					
Deposits	-	-	-	-	-
Bonds and similar securities	-	-	-	-	-
Debt securities	-	-	-	-	-
Temporary financial securities operations	-	-	-	-	-
Financial accounts	38,177.51	-	-	-	-
<b>Liabilities</b>					
Temporary financial securities operations	-	-	-	-	-
Financial accounts	3,394,401.13	-	-	-	-
<b>Off-balance sheet</b>					
Hedging operations	-	-	-	-	-
Other operations	-	-	-	-	-

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.

By main currency	USD	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	2,013.80	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).

<b>Receivables</b>	<b>8,470,195.18</b>
Future currency exchange operations:	
Future purchases of currency	-
Total negotiated amount of future currency sales	-
Other receivables:	
Other receivables	4,943,437.09
Deferred settlement sales	2,403,320.03
Security deposits (paid)	702,000.00
Coupons receivable	421,438.06
-	-
Other operations	-
<b>Debts</b>	<b>74,986.03</b>
Future currency exchange operations	
Future sales of currency	-
Total negotiated amount of future currency purchases	-
Other debts:	
Account payable	73,261.55
Miscellaneous debtors and creditors	1,724.48
-	-
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

Number of equities issued/redeemed during the fiscal year:	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Equity ACC / FR0012205672	5,000	100,000.00	-	-
Equity DIST / FR0010251744	1,563,041	124,326,962.59	1,831,393	146,112,201.08
Subscription / redemption commission by equity category:		Amount		Amount
Equity ACC / FR0012205672		-	-	-
Equity DIST / FR0010251744		36,120.82	-	45,405.01
Remittances by equity category:		Amount		Amount
Equity ACC / FR0012205672		-	-	-
Equity DIST / FR0010251744		-	-	-
Commissions acquired by the Compartment by equity category:		Amount		Amount
Equity ACC / FR0012205672		-	-	-
Equity DIST / FR0010251744		36,120.82	-	45,405.01

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Equity ACC / FR0012205672	<b>0.30</b>
Equity DIST / FR0010251744	<b>0.30</b>
Performance commissions (variable fees): amount of costs for the fiscal year	<b>Amount</b>
Equity category:	
Equity DIST / FR0010251744	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	-

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI EUROPE (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR MSCI EUROPE (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

International equities.

At least 60% of the Lyxor MSCI Europe (DR) UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equities:** capitalisation of all amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to replicate, upward or downward, the MSCI Europe Net Total Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in Euros (EUR), and representative of the large and medium capitalisations of the developed European markets, while minimising as far as possible the tracking error between the performance of the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### **Benchmark indicator:**

The Benchmark is the MSCI Europe Net Total Return index, net dividends reinvested (i.e. the Benchmark Indicator's performance includes the net dividends paid by its underlying equities), listed in EUR.

The Benchmark Indicator is an equity index, weighted by free float-adjusted market capitalisation, calculated and published by the international index provider MSCI.

The Benchmark Indicator retains the basic features of the MSCI indices, i.e.:

- a) The universe of securities included in the Benchmark Indicator;
- b) Free-float adjustment of the securities included in the Benchmark Indicator;
- c) Industry classification according to the Global Industry Classification Standard (GICS).

The Benchmark Indicator is a representative index of large and mid-cap companies in developed European markets. The Benchmark Indicator includes only stocks from European countries and aims to include 85% of the free float-adjusted market capitalisation of each country in the index and of each European industry group.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalisation of the European markets, while also reflecting the market’s economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: <http://www.msci.com>.

The monitored performance is that of the closing prices of the Benchmark Indicator.

#### **Benchmark indicator publication**

Official MSCI indices are indices calculated continuously from 9:00 am to 5:30 pm (Paris time) for which MSCI calculates a closing price using the official closing prices of the stock exchanges on which the constituent securities are listed.

The Benchmark Indicator is also calculated in real time on each trading day. The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the website: [www.msci.com](http://www.msci.com).

#### **Benchmark indicator revision and composition**

The revision of the Benchmark Indicator takes place quarterly.

The exact composition and rules for revision of the Benchmark, published by MSCI, are available on the website: <http://www.msci.com>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

In accordance with Article 34 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator of the MSCI Limited Benchmark Indicator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

### **Investment strategy:**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by its delegated asset manager, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

On an ancillary basis, and once again to ensure the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into contracts involving Future Financial Instruments ("FFI"). Such contracts entered into in this context may involve index futures and/or hedge swaps and in particular to minimize the Compartment's tracking error.

In order to enable investors to benefit from transparency as to the direct replication method used (i.e. full replication of the Benchmark Indicator) and as to the consequences of this method on the Compartment's assets, investors may find updated information on the composition of the basket of balance sheet assets held in the Compartment's portfolio on the page dedicated to the Compartment at [www.lyxoretf.com](http://www.lyxoretf.com). The frequency of any updates and/or the date on which the aforementioned information is updated are also indicated on this page.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

**2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will comply with the investment rules laid down in the European Directive 2009/65/EC of 13 July 2009. The Compartment will mainly invest in the securities making up the Benchmark Indicator.

The Compartment may hold up to 10% of its assets in units or shares of the following CIUs or investment funds: French or foreign UCITS complying with Directive 2009/65/EC - Within the framework of these investments, the Compartment may subscribe units or equities of UCITS managed by the Management Company or a company with which it is linked.

Where the Compartment receives securities as collateral, under the conditions and within the limits of paragraph 8 below of this section, which are received in full ownership by the Compartment, they also constitute balance sheet assets received in full ownership by the Compartment.

In the context of future optimisation of the management of the Compartment, the Manager reserves the possibility to use other instruments within the limits of the regulations in order to achieve its management objective.

**3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

When Société Générale acts as a counterparty to FFIs, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

**7. Temporary securities acquisition and sale operations**

The Compartment may use effective portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and in particular:

**• Nature of the operations used:**

- securities lending and borrowing with reference to the Monetary and Financial Code

**• Nature of the interventions, all transactions being limited to achieving the management objective:**

- optimisation of the Compartment's income.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 25% of the Compartment's assets.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 0% of the Compartment's assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the "Agent"). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments:

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.

- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment's annual report.
- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, and transactions involving the temporary purchase and sale of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;

(vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

**Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

**Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

**- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

**- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**- Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**- Liquidity risk on a place of listing**

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risk arising from a lack of perfect replication**

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as ‘sampling’, which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and financial futures. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

**- Risk related to the use of effective portfolio management techniques**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the index. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the Compartment.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the European equity markets.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

# Activity report

The fund replicates the performance of the MSCI Europe Net Return EUR Index EUR (Ticker:M7EU).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Europe (DR) UCITS ETF - Dist	FR0010261198	EUR	-13.10% <sup>(1)</sup>	-13.13%		55.95%
Lyxor MSCI Europe (DR) UCITS ETF - Acc	FR0013470853	EUR	-18.85% <sup>(1)</sup>	-18.88%		-18.85%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.082% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2e</sub> / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

LYXOR MSCI EUROPE (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR MSCI EUROPE (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	3%
Orange Flag	34%
Yellow Flag	25%
Green Flag	38%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
84	186	141	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	98%
			Scope 1& 2 estlmatlons are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	7%
Thermal Coal	1%
Natural Gaz	6%
Oil	6%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated In Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	148
Gas (MMBOE)	0.0010
Oil (MMBOE)	0.0011

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	286.8
Thermal Coal	270.3
Oil	460.4
Gas	337.1
Total	1 354.6

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	270.3
Oil Sands	40.1
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	310.4
Other	1 044.2

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	6.2%	5.8%	6.7%
Some efforts	86.3%	90.8%	78.5%
Limited efforts/information	2.5%	2.2%	4.2%
No effort/No evidence	4.8%	1.2%	10.7%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

7.0%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	13.9%
Liquid Fuel	1.5%
Natural Gas	34.8%
Nuclear	18.3%
Renewables	14.9%
Thermal Coal	16.5%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	20%
20-49.9%	3%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	14.7%
Energy Efficiency	18.3%
Green Building	1.9%
Pollution Prevention	5.0%
Sustainable Water	6.4%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.4%
Energy Efficiency	1.6%
Green Building	0.3%
Pollution Prevention	0.3%
Sustainable Water	0.3%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	9.1%	87.0%	3.9%	71.2%	21.9%	6.9%
Carbon Emissions	1.9%	45.8%	52.3%	77.2%	16.8%	6.0%
Electronic Waste	3.4%	13.2%	83.3%	98.6%	0.2%	1.3%
Opportunities in Green Building	2.6%	51.0%	46.4%	98.3%	1.3%	0.3%
Opp's in Renewable Energy	6.1%	84.5%	9.3%	96.7%	1.4%	1.9%
Packaging Material & Waste	12.0%	43.0%	45.0%	88.0%		12.0%
Water Stress	9.9%	60.8%	29.3%	44.0%	35.6%	20.3%
Toxic Emissions & Waste				39.4%	46.0%	14.6%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	460
Number of Voted Meetings	128
Participation rate at General Meetings	27.8%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	95.1%	4.9%	0.0%
Directors Related	85.3%	14.5%	0.2%
Non-Salary Comp.	86.7%	10.4%	2.9%
Capitalization	91.7%	8.3%	0.0%
Antitakeover Related	63.6%	36.4%	0.0%
Miscellaneous	100.0%	0.0%	0.0%
Reorg. and Mergers	78.9%	21.1%	0.0%
Shareholders Proposals	37.5%	59.4%	3.1%

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor MSCI Europe (DR) UCITS ETF fund participated during the financial year.

France	32.0%
Germany	28.1%
Spain	14.1%
Italy	5.5%
Netherlands	10.2%
Portugal	0.8%
Ireland	1.6%
Belgium	3.9%
Luxembourg	2.3%
Finland	0.8%
Austria	0.8%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and best execution policies is available on the website [www.lyxor.com](http://www.lyxor.com).

### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## Effective portfolio management techniques and derivative financial instruments

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM / Reuters on the same day of the Compartment's net asset value date.

# appendix

#### Posting method for the trading fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

#### Financial instruments received as collateral

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment;
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company; 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equities:** capitalisation of all amounts available for distribution.

**APPENDIX TO THE REPORT**  
**intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

UCITS management commission: 0.25 % tax included

Average assets of the fund for the period from 01/11/19 to 30/10/20: 1,320,088,090.65

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020
Fund management commission	4,090,130.10	1,754,315.60	3,289,874.52
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Custodian bank fee	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	4,090,130.10	1,754,315.60	3,289,874.52

**Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:**

TER, including performance fee

$$(3,289,874.52/1,320,088,090.65) * 100$$

0.25 %

<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

International equities.

At all times, the Lyxor MSCI USA UCITS ETF Compartment (the “Compartment”) is 60% exposed to at least one foreign equity market or to the equity markets of several countries, possibly including the French market.

The Compartment is index-based, of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

**Class of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc and Monthly Hedged to EUR - Acc equities:** Capitalisation of all the amounts available for distribution.

### Management objective

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI USA Net Total Return index (dividends reinvested) (the “Benchmark Indicator”) while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### Benchmark indicator

The Benchmark Indicator is an equity index calculated and published by the supplier of international indices, MSCI.

The Benchmark Indicator is made up exclusively of American equities (United States) and retains the fundamental characteristics of the MSCI indices, i.e.:

Adjustment of the stock market capitalization of the securities in the Benchmark Indicator on the basis of the float, and sector classification according to the GICS (Global Industry Classification Standard) classification.

The Benchmark Indicator is a “net dividends reinvested” index, which means that the Benchmark Indicator’s performance includes the dividends paid by its underlying equities.

The objective of the Benchmark Indicator is to represent 85% of the capitalization adjusted on the basis of the float, of each group of industries of the American market.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalization of the American market, while also reflecting the market’s economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: [www.msci.com](http://www.msci.com).

The monitored performance is that of the closing prices of the Benchmark Indicator.

The Benchmark Indicator is weighted by market capitalisation.

The class of Monthly Hedged to EUR - Acc equities employ a monthly-rebalanced hedging strategy that reduces the effect of a change in the exchange rate between the currency of each Benchmark Indicator component and the equities class's currency.

#### **Benchmark indicator publication**

The official MSCI indices are calculated on a daily basis at closing prices using the official closing stock market prices for the constituent stocks.

The Benchmark Indicator is also calculated in real time every day that the Benchmark Indicator is published.

The Benchmark Indicator's closing price is available on the MSCI website: [www.msci.com](http://www.msci.com).

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the MSCI USA Net Total Return Reference Indicator is entered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the PMC has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

#### **Benchmark indicator revision**

MSCI Standards indices are revised annually so as to be representative of 85% of the adjusted market capitalisation in each country and industry group.

The MSCI Standards indices are also reviewed quarterly, in order to take into account changes affecting a stock's market capitalisation (number of securities and free float) or its classification by sector. The principal changes in a company's capital structure may be implemented in real time (merger or acquisition, large rights issues or IPOs).

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

The MSCI rules for Benchmark Indicator revision are published by MSCI and are available on the website: [www.msci.com](http://www.msci.com).

### **Investment strategy**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The financial securities in the Compartment's assets will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The securities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to primarily use the following assets:

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

**The aforementioned equities will be chosen on the basis of criteria:**

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment on undertakings for collective investment in transferable securities ("UCITS") compliant with the Directive 2009/65/EC and/or that are eligible according to article R214-13 of the Monetary and Financial Code is limited to 10% of the assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

The Compartment will use Index-linked swaps traded over the counter, thereby swapping the value of the Compartment's assets (or of any other asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

In compliance with its best execution policy, the management company considers that the Société Générale is the counterparty that generally makes it possible to obtain the best possible result with these future financial instruments. These future financial instruments (including index-linked swaps) can therefore be traded with the Société Générale, without prior open competition involving several counterparties.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

#### **4. Securities with integrated derivatives**

None.

#### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

#### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

#### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

#### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees.**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the UCITS may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

**Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into total return swaps on behalf of the Compartment.

Only financial institutions established in an OECD country and which after analysis are deemed to be satisfactory are selected. This analysis is conducted using criteria that are specific to the Management Company's Risks department, which for example include financial stability, credit rating, risk exposure, credit spread, economic sector, and credit history.

The list of authorised counterparties is reviewed monthly and possibly more frequently in the event of a market shock. This review involves all of the Management Company's relevant departments, including Asset Management, Risks, Operations and Support Services. The counterparties and intermediaries thus selected are regularly monitored pursuant to the Management Company's Execution Policy. All incidents are subject to an escalation procedure for reporting to the Management Company's senior management and/or to the Société Générale group's Risk department.

**Risk profile**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

**Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

**Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

### **Liquidity risk on a place of listing**

The Compartment's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

### **Risks related to collateral management**

#### **Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

#### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

#### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

#### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

#### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

#### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

#### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

### **Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

### **Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the reference Benchmark Indicator followed by the Compartment.

### **Exchange risk linked to the class of Dist and Acc equities**

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

### **Risk related to the exchange hedging specific to the class of Monthly Hedged to EUR - Acc equities**

In order to hedge the exchange risk on the class of Monthly Hedged to EUR - Acc equities against the currency of each of the values comprising the index specific to the Benchmark Indicator, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of each of the values comprising the Benchmark Indicator and the currency of the said equity class. This hedge nevertheless remains imperfect as a result of its monthly adjustment frequency and the employed instruments.

### **Subscribers concerned and typical investor profile**

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the American equities market (United States).

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

# Activity report

The fund replicates the performance of the MSCI Daily TR Net USD (Ticker:NDDUUS) index.

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI USA UCITS ETF – Dist	FR0010296061	EUR	6.51% <sup>(1)</sup>	6.28% <sup>(2)</sup>		235.19%
Lyxor MSCI USA UCITS ETF – Acc	FR0011363423	EUR	6.51% <sup>(1)</sup>	6.28% <sup>(2)</sup>		184.74%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

<sup>(2)</sup> “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share’s currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

The Tracking Error is 0.0016% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap’s counterparty is: Société Générale & Morgan Stanley.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments’ efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** *(not audited by the auditor)*

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company’s voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company’s website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company’s method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested).
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested).
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR MSCI USA UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	1%
Orange Flag	39%
Yellow Flag	26%
Green Flag	34%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
38	133	148	Scope 1 reported (vs estimated)	88%
			Scope2 reported (vs estimated)	80%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

#### \*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)<sup>1</sup>. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

<sup>1</sup> EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	3%
Thermal Coal	2%
Natural Gaz	2%
Oil	2%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0003
Oil (MMBOE)	0.0004

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	0.0
Thermal Coal	0.6
Oil	195.6
Gas	71.0
Total	265.3

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

CO2e/\$M Invested	
Thermal Coal	0.5
Oil Sands	43.0
Shale Oil or Shale Gas	59.2
Sum High Impact Reserves	102.8
Other	192.7

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	8.3%	4.1%	2.6%
Some efforts	76.2%	88.0%	65.4%
Limited efforts/information	4.7%	2.5%	3.5%
No effort/No evidence	12.8%	5.4%	28.5%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	4.0%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	1.8%
Liquid Fuel	0.1%
Natural Gas	35.6%
Nuclear	28.0%
Renewables	7.9%
Thermal Coal	26.6%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	28%
20-49.9%	4%
50-100%	1%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	8.3%
Energy Efficiency	31.1%
Green Building	1.4%
Pollution Prevention	5.0%
Sustainable Water	3.5%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.4%
Energy Efficiency	3.8%
Green Building	0.2%
Pollution Prevention	0.2%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	1.6%	94.3%	4.1%	82.2%	15.1%	2.7%
Carbon Emissions	0.5%	25.9%	73.6%	84.4%	13.0%	2.6%
Electronic Waste	0.8%	6.4%	92.7%	93.1%	0.5%	6.4%
Opportunities in Green Building	0.6%	36.0%	63.3%	98.6%	0.8%	0.6%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR MSCI USA UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities (“NDS”) having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument’s counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company’s responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment’s net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment’s net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company’s responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment’s reference currency are the exchange rates disseminated by the fixing WM Reuters on the same day of the Compartment’s net asset value date.

# appendix

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Assessment methods for off-balance sheet commitments**

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management fees and administrative fees external to the portfolio management company including tax <sup>(1)</sup>	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Classes of Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Classes of Acc and Monthly Hedged to EUR - Acc equities:** Capitalisation of all the amounts available for distribution.

---

<b>Compartment / feeder</b>	LYXOR MSCI WORLD UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

International equities.

At least 60% of the Lyxor MSCI World UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Classes of Dist, Monthly Hedged to EUR - Dist and Monthly Hedged to USD equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of I - EUR equities:** Capitalisation of all amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI World Net Total Return index (dividends reinvested) (the “Benchmark Indicator”), listed in US Dollars (USD), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### **Benchmark indicator:**

The Benchmark Indicator is an equities index calculated and published by the supplier of international indices, MSCI.

It measures the overall performance of the developed markets. On 31 January 2018, the MSCI World Index consisted of 1,649 securities listed on the markets of 23 developed countries: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, United Kingdom and United States.

The Benchmark Indicator is comprised by bringing together the MSCI indices representing each of these 23 developed countries.

The Benchmark Indicator is a “net dividends reinvested” index, which means that the Benchmark Indicator’s performance includes the dividends paid by its underlying equities.

The weight of each security in the Benchmark Indicator is adjusted according to its stock market capitalisation, on the basis of the free-float. Consequently, the number of securities included in the composition of the basket comprising the Benchmark Indicator may change over time.

The MSCI methodology and its calculation method require the Benchmark Indicator to be made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the website: [www.msci.com](http://www.msci.com).

The monitored performance is that of the closing prices of the Benchmark Indicator.

The Benchmark Indicator is a weighted index by equity market capitalisation.

### **Benchmark indicator publication**

The official MSCI indices are calculated on a daily basis at the market closing using the official closing prices of the stock exchanges of listing of securities composing the indices. The Benchmark indicator is also calculated in real time every stock exchange trading day.

The Benchmark Indicator's closing price is available on MSCI website: [www.msci.com](http://www.msci.com).

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the MSCI Limited administrator of the MSCI World Net Total Return Reference Indicator is registered in the register directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Benchmark indicator revision and composition**

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and MSCI rules for Benchmark indicator revision are published by MSCI and are available on MSCI website: [www.msci.com](http://www.msci.com). The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

## **Investment strategy:**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities in the Compartment's assets will notably be securities making up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The securities basket held may be adjusted daily so that its value will be superior or equal to 100% of the Fund's net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:
  - o Subordination to the main market indices or to the Benchmark Indicator;
  - o Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
  - o Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).
- of diversification, notably:
  - o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
  - o Geographical area;
  - o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) compliant with the Directive 2009/65/EC is limited to 10% of the assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operation.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, and transactions involving the temporary purchase and sale of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment’s account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment’s assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees.**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged.

Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

**Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

**Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

**- Equity risk**

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market.

The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

**- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

**- Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

**- Liquidity risk on a place of listing**

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment’s indicative net asset value, and/or
- iv) A market maker’s violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace’s IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as “OTC derivatives”) and/or efficient portfolio management techniques (hereinafter referred to as “EPMTs”). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment 's assets per counterparty.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,

iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

v) One or more components of the Benchmark Indicator becomes non-liquid.

vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to the exchange risk insofar as the underlying securities making up the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the Benchmark Indicator followed by the Compartment.

**- Exchange risk linked to the classes of Dist equities**

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

**- Risk related to the exchange hedging specific to the classes of I-EUR, Monthly Hedged to EUR - Acc and Monthly Hedged to USD - Dist equities:**

In order to hedge the exchange risk on the EUR (respectively US dollar) against the currency of each of the values comprising the index specific to the class of I-EUR, Monthly Hedged to EUR - Dist (respectively Monthly Hedged to USD - Dist) equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of each of the values comprising the Benchmark Indicator and the currency of the said equity class. This hedge nevertheless remains imperfect as a result of its monthly adjustment frequency and the employed instruments; the Compartment can therefore be subject to downward market movements that will impact to the equity's net asset value. Moreover, the cost of implementing the exchange hedge will have a negative impact on the net asset value of the I-EUR, Monthly Hedged to EUR - Dist and Monthly Hedged to USD - Dist equities.

**Subscribers concerned and typical investor profile:**

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the international equities market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

## Activity report

The fund replicates the performance of the MSCI World Net Total Return USD Index USD (Ticker:NDDUWI).

### Performance trend at the closing date:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI World UCITS ETF - Dist	FR0010315770	EUR	4.46% <sup>(1)</sup>	4.36% <sup>(3)</sup>	4.41% <sup>(2)</sup>	135.74%
Lyxor MSCI World UCITS ETF - Monthly Hedged to EUR – Dist	FR0011660927	EUR	1.74% <sup>(1)</sup>	1.85% <sup>(4)</sup>		50.82%
Lyxor MSCI World UCITS ETF - Monthly Hedged to USD - Dist	FR0011669845	USD	3.88% <sup>(1)</sup>	3.99% <sup>(4)</sup>		69.25%
Lyxor MSCI World UCITS ETF - I-EUR	FR0013465804	EUR	-3.54% <sup>(1)*</sup>	-2.83% <sup>(3)</sup>		-3.54%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

<sup>(2)</sup> “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk. The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

<sup>(3)</sup> “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

<sup>(4)</sup> “The relevant benchmark for comparison is the hedged Index.”

\* Performance since creation of the unit on 19/12/2019

The Tracking Error is 0.0074% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### Regulatory information

**Transfer commission** (not audited by the auditor)

None.

### Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## Overall risk of the Compartment

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 2%  
Orange Flag 34%  
Yellow Flag 26%  
Green Flag 38%

LYXOR MSCI WORLD UCITS ETF  
(compartment of the Multi Units France Sicav)

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
51	148	148	Scope 1 reported (vs estimated)	91%
			Scope2 reported (vs estimated)	85%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions, (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon

Fossil Fuel Reserves	5%
Thermal Coal	2%
Natural Gaz	3%
Oil	3%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000

Thermal Coal (Tons)	92
Gas (MMBOE)	0.0004
Oil (MMBOE)	0.0006

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	131.1
Thermal Coal	167.8
Oil	299.5
Gas	123.4
Total	742.1

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	167.8
Oil Sands	103.7
Shale Oil or Shale Gas	42.0
Sum High Impact Reserves	313.5
Other	428.6

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	5.5%	4.0%	3.5%
Some efforts	77.7%	89.0%	68.3%
Limited efforts/information	4.8%	2.8%	3.7%
No effort/No evidence	11.9%	4.1%	24.5%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	4.8%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	6.7%
Liquid Fuel	0.7%
Natural Gas	35.6%
Nuclear	22.4%
Renewables	10.0%
Thermal Coal	24.6%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	26%
20-49.9%	4%
50-100%	1%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	11.2%
Energy Efficiency	28.0%
Green Building	2.5%
Pollution Prevention	5.3%
Sustainable Water	4.6%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.6%
Energy Efficiency	3.1%
Green Building	0.4%
Pollution Prevention	0.2%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.2%	92.2%	4.6%	79.7%	16.0%	4.3%
Carbon Emissions	0.9%	29.3%	69.8%	81.6%	15.0%	3.4%
Electronic Waste	1.8%	7.2%	90.9%	94.5%	0.5%	5.0%

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR MSCI WORLD UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM/Reuters on the same day of the Compartment's net asset value date.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Assessment methods for off-balance sheet commitments**

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule rate</b>
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.30% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in euros.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Classes of Dist, Monthly Hedged to EUR - Dist and Monthly Hedged to USD equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of I - EUR equities:** Capitalisation of all amounts available for distribution.

Lyxor MSCI World UCITS ETF (the "Fund") is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. <b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

International equities.

At least 60% of the Lyxor MSCI Emerging Markets UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upward or downward evolution of the MSCI Emerging Markets Net Total Return index (net dividends reinvested) (the “Benchmark Indicator”), listed in US Dollars (USD), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 1%.

### Benchmark indicator

The Benchmark Indicator is an equity index calculated and published by the supplier of international MSCI indices.

The Benchmark Indicator consists exclusively of securities from emerging markets and retains the fundamental characteristics of the MSCI indices, i.e.: adjustment of the market capitalisation of the securities in the index on the basis of the float and sector classification according to the GICS (Global Industry Classification Standard) classification.

The Benchmark Index provides exposure to the equity markets of 24 emerging markets (i.e., as of 31 January 2018, to the following emerging markets: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, South Korea, Thailand, Turkey, United Arab Emirates).

The objective of the Benchmark Indicator is to represent 85% of the capitalisation that is adjusted on the basis of the float for each group of industries in the emerging markets.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator comprises 85% of the market capitalisation of the emerging markets, while also reflecting the market’s economic diversity.

The Benchmark Indicator is a "Net Total Return" index, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components are available on the website: [www.msci.com](http://www.msci.com)

The monitored performance is that of the Benchmark Indicator closing prices.

#### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily at the closing price using the official closing prices of the stock exchanges of listing of the constituent securities.

The Benchmark Indicator is also calculated in real time for each day in the calendar of publication of the Benchmark Indicator.

The closing price of the Benchmark Indicator is available on the MSCI website: [www.msci.com](http://www.msci.com).

The Benchmark Indicator administrator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the benchmark indices used, describing the measures to be implemented in the event of substantial changes to an index or termination of supply of that index.

#### **Benchmark indicator revision and composition**

The revision of the Reference Indicator takes place quarterly.

The exact composition and revision rules of the Benchmark Indicator published by MSCI are available on the website: [www.msci.com](http://www.msci.com)

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Investment strategy**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

#### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

#### **The aforementioned equities will be chosen on the basis of criteria:**

##### Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertaking for collective investment in transferable securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

**3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section’s paragraph 1 above).

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s portfolio, nor regarding the underlying assets of the future financial instruments.

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company’s conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

**7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

**8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases.

The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- Such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- Such financial guarantees consist of at least six different issues of which none exceeds 30% of the Compartment's assets.

**In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:**

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;

(iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upwards or downwards, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Risk related to low diversification of the Benchmark Indicator**

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

#### **Risks related to collateral management**

##### Operational risk

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

##### Legal risk

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

#### **Risk related to the exposure to Emerging markets**

The Compartment's exposure to emerging markets results in a greater risk of loss that would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, government restrictions on foreign investments and interruption or restriction of the convertibility or transferability of any of the currencies comprising the Benchmark Indicator.

#### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

##### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

##### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

##### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

##### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

**Exchange risk linked to the Acc and I-EUR equities classes**

The abovementioned classes of equities are exposed to an exchange risk to the extent that they are listed in a currency other than that of the Benchmark Indicator.

Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the Benchmark Indicator, as a result of exchange rate fluctuations.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the Japanese equity market and more specifically to the performance of the most important Japanese stocks.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 6 September 2018.*

## Activity report

The fund replicates the performance of the MSCI Daily TR Net Emerging Markets USD Index (Ticker:NDUEEGF).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance from 28/02/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Emerging Markets UCITS ETF - Acc EUR	FR0010429068	EUR	2.87% <sup>(1)</sup>	3.68% <sup>(3)</sup>	4.41% <sup>(2)</sup>	60.61%
Lyxor MSCI Emerging Markets UCITS ETF - Acc USD	FR0010435297	USD	7.41% <sup>(1)</sup>	8.25%		28.37%
Lyxor MSCI Emerging Markets UCITS ETF -	FR00113465796	EUR	-4.74% <sup>(1)</sup>	-2.85% <sup>(3)</sup>	4.79% <sup>(2)</sup>	-4.74%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index»

<sup>(2)</sup> “Since the Share Class NAV is not calculated in the Index currency, the share class may be exposed to currency risk.

The calculation methodology for the Foreign Exchange rate during the period is share currency/ index currency.”

<sup>(3)</sup> “Where the Benchmark Indicator is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Indicator is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Indicator.”

The Tracking Error is 0.0275% for the sub-fund. The Tracking Error target for the year was 1%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR MSCI EMERGING MARKETS UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	2%
Orange Flag	10%
Yellow Flag	36%
Green Flag	53%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
120	299	244	Scope 1 reported (vs estimated)	71%
			Scope2 reported (vs estimated)	74%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)<sup>\*</sup>. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	8%
Thermal Coal	2%
Natural Gaz	6%
Oil	6%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	852
Gas (MMBOE)	0.0040
Oil (MMBOE)	0.0022

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	527.8
Thermal Coal	1 555.8
Oil	935.2
Gas	1 297.1
Total	4 324.4

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	1 555.8
Oil Sands	34.3
Shale Oil or Shale Gas	13.1
Sum High Impact Reserves	1 603.2
Other	2 721.2

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.1%	1.4%	3.2%
Some efforts	60.5%	85.8%	31.1%
Limited efforts/information	15.1%	4.7%	2.5%
No effort/No evidence	23.3%	7.9%	63.2%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	4.0%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	16.5%
Liquid Fuel	2.2%
Natural Gas	33.9%
Nuclear	6.4%
Renewables	4.7%
Thermal Coal	36.3%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	36%
20-49.9%	1%
50-100%	2%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	7.1%
Energy Efficiency	38.7%
Green Building	2.1%
Pollution Prevention	1.9%
Sustainable Water	2.2%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.5%
Energy Efficiency	3.0%
Green Building	0.2%
Pollution Prevention	0.1%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR MSCI EMERGING MARKETS UCITS ETF  
(compartment of the Multi Units France Sicav)

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the negotiation fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the coupon received.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.55% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in Euro.

### 3. Information supplements

#### 3.1 Financial instruments: breakdown by the instrument's legal or economic type

##### 3.1.1 Breakdown of the "Bonds and similar securities" item by type of instrument

	Traded on a regulated or similar market	Not traded on a regulated or similar market
Index-linked bonds	-	-
Convertible bonds	-	-
Fixed-rate bonds	-	-
Variable-rate bonds	-	-
Zero-coupon bonds	-	-
Participating securities	-	-
Other instruments	-	-

##### 3.1.2 Breakdown of the "Debt securities" item by legal or economic type

	Traded on a regulated or similar market	Not traded on a regulated or similar market
Treasury Bills	-	-
Negotiable EUropean Commercial Paper (NEU CP) issued by non-financial issuers	-	-
Negotiable EUropean Commercial Paper (NEU CP) issued by bank issuers	-	-
Negotiable EUropean Medium Term Note (NEU MTN)	-	-
Other instruments	-	-

##### 3.1.3 Breakdown of the "Sale operations on financial instruments" item by instrument type

	Securities under reverse repurchase agreement sold	Securities borrowed sold	Securities acquired with redemption right sold	Short sales
Equities	-	-	-	-
Bonds	-	-	-	-
Debt securities	-	-	-	-
Other instruments	-	-	-	-

LYXOR MSCI EMERGING MARKETS UCITS ETF  
(compartment of the Multi Units France Sicav)

3.1.4 Breakdown of the off-balance sheet headings by market type (notably rates, equities)

	Rate	Equities	Exchange	Other
<b>Hedging</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-
<b>Other operations</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	1,019,128,368.00
Other commitments	-	-	-	-

3.2 Breakdown by rate types of the asset, liability and off-balance sheet items

	Fixed rate	Variable rate	Revisable rate	Other
<b>Assets</b>				
Deposits	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	33.45
<b>Liabilities</b>				
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

3.3 Breakdown by residual maturity of the asset, liability and off-balance sheet items

	0-3 months	3 months - 1 year	1-3 years	3-5 years	>5 years
<b>Assets</b>					
Deposits	-	-	-	-	-
Bonds and similar securities	-	-	-	-	-
Debt securities	-	-	-	-	-
Temporary financial securities operations	-	-	-	-	-
Financial accounts	33.45	-	-	-	-
<b>Liabilities</b>					
Temporary financial securities operations	-	-	-	-	-
Financial accounts	-	-	-	-	-
<b>Off-balance sheet</b>					
Hedging	-	-	-	-	-
Other operations	-	-	-	-	-

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	USD	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	254,395,937.22	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	0.24	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>19,096,820.33</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	19,096,820.33
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>19,569,716.36</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Account payable	19,096,820.33
Accrued expenses	472,896.03
-	-
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

Equity category issued/redeemed during the fiscal year:	Number of equities	Subscriptions		Redemptions	
		Amount	Number of equities	Amount	Amount
Equity Acc (EUR) / FR0010429068	27,831,959	268,839,361.25	40,449,540	401,070,526.03	
Equity Acc (USD) / FR0010435297	9,926,725	103,666,565.17	12,754,082	126,195,245.21	
Equity I - EUR (EUR) / FR0013465796	2,200	220,000.00	1,000	100,444.58	
Subscription / redemption commission by equity category:		Amount		Amount	
Equity Acc (EUR) / FR0010429068		-		-	
Equity Acc (USD) / FR0010435297		-		-	
Equity I - EUR (EUR) / FR0013465796		-		-	
Retrocessions by equity category:		Amount		Amount	
Equity Acc (EUR) / FR0010429068		-		-	
Equity Acc (USD) / FR0010435297		-		-	
Equity I - EUR (EUR) / FR0013465796		-		-	
Commissions acquired by the Compartment by equity category:		Amount		Amount	
Equity Acc (EUR) / FR0010429068		-		-	
Equity Acc (USD) / FR0010435297		-		-	
Equity I - EUR (EUR) / FR0013465796		-		-	

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	%
Equity category:	
Equity Acc (EUR) / FR0010429068	<b>0.55</b>
Equity Acc (USD) / FR0010435297	<b>0.55</b>
Equity I - EUR (EUR) / FR0013465796	<b>0.55</b>
Outperformance commissions (variable fees): amount of costs for the year	<b>Amount</b>
Equity category:	
Equity Acc (EUR) / FR0010429068	-
Equity Acc (USD) / FR0010435297	-
Equity I - EUR (EUR) / FR0013465796	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
 3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	<b>1,664,802.25</b>

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR JAPAN (TOPIX) (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR JAPAN (TOPIX) (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

International equities.

At least 60% of the Lyxor Japan (Topix) (DR) UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Classes of Dist equities (EUR), Classes of Dist equities (JPY), Class of Daily Hedged to EUR - Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Daily Hedged to EUR - Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to replicate the upward or downward the evolution of the TOPIX® Gross Total Return index (gross dividends reinvested) (the “Benchmark Indicator”), listed in Japanese yen (JPY), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### **Benchmark indicator:**

The Benchmark Indicator is an equity index calculated and published by the Tokyo Stock Exchange.

The Tokyo Stock Exchange, the main organised Japanese stock market, is divided into two Sections:

- the first section includes the largest listed companies in terms of market capitalisation.
- the second section is dedicated to companies with smaller market capitalisations, or ones newly listed.

The Benchmark Indicator is made up of all Japanese equities listed in the First Section of the Tokyo Stock Exchange. Each equity’s weight in the Benchmark Indicator is weighted by its market capitalisation.

The Benchmark Indicator is therefore particularly representative of the Japanese economy since it is made up of a significant number of companies, which include the largest capitalisations within the market.

The Benchmark indicator is a “Gross Total Return” index, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator’s components will be available on the website: <http://www.jpx.co.jp/english/>

The monitored performance is that of the Benchmark Indicator listed in JPY closing prices.

### **Benchmark Indicator publication**

The monitored performance is that of the Benchmark Indicator closing prices.

The Benchmark Indicator's closing price is available on the website: <http://www.jpx.co.jp/english/>

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the administrator Tokyo Stock Exchange of the TOPIX® Gross Total Return Benchmark Indicator has until 01.01.2020 to apply for approval or registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Benchmark Index has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

#### **Benchmark Indicator revision and composition**

The Benchmark Indicator will be revised each time a given Japanese equity enters into the composition of the first listing section of the Tokyo Stock Exchange, or is withdrawn therefrom. The Benchmark Indicator will therefore not be revised on a periodic basis.

The exact composition of the Benchmark Indicator and rules for revising its composition as drawn up by the Tokyo Stock Exchange are available on the website: <http://www.jpx.co.jp/english/>

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

#### **Investment strategy:**

##### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by the Management Company, may decide to employ a "sampling" technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument ("FFI"). These transactions could for example be futures contracts on indices and/or swaps for hedging purposes and in particular to minimise the Compartment's tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator) and on its consequences in terms of the assets in the Compartment's portfolio, information on the updated composition of the basket of 'balance sheet' assets in the Compartment's portfolio is available on the page dedicated to the Compartment accessible on Lyxor's website: [www.lyxoretf.com](http://www.lyxoretf.com). The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

The website [www.lyxoretf.com](http://www.lyxoretf.com) provides a page that is dedicated to the Compartment and which among other things informs investors about the direct replication method employed (total replication of the Benchmark Indicator or sampling to reduce replication costs). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

##### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. The Compartment will be mainly invested in securities making up the Benchmark Indicator.

The investment in Undertaking for Collective Investment in Transferable Securities (“UCITS”) that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of the future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

The counterparty of the future financial instruments will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments within the limits and under the conditions provided for by the regulations.

The counterparty to the aforementioned forward financial instruments will not have any discretionary power over the composition of the Compartment’s investment portfolio or over the underlying assets of the forward financial instruments within the limits and under the conditions provided for by regulations.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

Pursuant to its investment strategy, the Compartment may use various efficient portfolio management techniques in compliance with Article R214-18 of the French Monetary and Financial Code, including the temporary sale of securities.

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment’s assets.
- Expected proportion of assets under management which may be subject to securities financing transactions: 0% of the Compartment’s assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the “Agent”). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment’s behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment’s behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments:

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.
- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment’s management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.
- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment’s gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment’s annual report.
- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment’s overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment’s annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs/expenses.

#### **8. Financial guarantees**

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

#### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

#### **Reinvestment of received guarantees:**

Non-cash collateral will not be sold, reinvested or pledged. At the manager's discretion, cash collateral may either be:

- i) Deposited in an authorised institution;
- ii) Invested in high-quality government bonds;
- iii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time;
- iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Risk arising from a lack of perfect replication**

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly.

The Compartment manager may therefore use various optimisation techniques, such as 'sampling', which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

**- Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**- Risk related to the use of effective portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

**- Risks related to collateral management**

Operational risk:

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

Legal risk:

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk related to the use of derivative instruments**

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

**- Risk that the management objective may only be partially reached**

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the Benchmark Indicator makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Exchange risk linked to the class of Dist equities**

The aforesaid equity classes are exposed to an exchange risk given that they are listed in a currency other than that of the index. Consequently, the net asset value of the aforesaid equity classes can decline despite an increase of the value of the benchmark index, as a result of exchange rate fluctuations.

**- Risk related to foreign exchange hedge**

In order to cover the EUR/JPY exchange risk on the class of Daily Hedged to EUR - Dist and Daily Hedged to EUR - Acc equities, the Compartment has recourse to a hedge strategy enabling the evolution impact between the currency of the Benchmark Indicator and that of the equity class to be reduced. Owing to the daily implementation of this hedge as well as its imperfection, the Compartment may be subject to the payment of costs or downward market movements that impact the asset value of the equity.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

An investor subscribing to this Compartment wishes to obtain an exposure to the Japanese equity market and, more specifically, to the performance of the largest Japanese securities.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Compartment approval date by the AMF (Financial Markets Authority): 6 June 2018.*
- *Compartment creation date: 20 September 2018.*

# Activity report

The fund replicates the performance of the Topix Total Return Index JPY index (Ticker:TPXDDVD).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist EUR	FR0010245514	EUR	-4.69% <sup>(1)</sup>	-3.88% <sup>(2)</sup>		43.95%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Dist JPY	FR0010377028	JPY	-3.74% <sup>(1)</sup>	-2.95%		15.02%
Lyxor Japan (TOPIX) (DR) UCITS ETF - Daily Hedged to EUR - Dist	FR0011475078	EUR	-4.58% <sup>(1)</sup>	-3.56% <sup>(3)</sup>		39.37%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

<sup>(2)</sup> “When the Benchmark Index is denominated in a currency other than the share currency, the performance of the Benchmark Index is converted into the share's currency for comparison purpose. FOREX transactions are executed on a daily basis (WM Reuters 5 pm rate on the relevant date).”

<sup>(3)</sup> “The relevant benchmark for comparison is the hedged Index.”

The Tracking Error is 0.2521% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

### **Transfer commission** *(not audited by the auditor)*

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533-22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

For ETF Funds ("Exchange Traded Fund") which aims to track its underlying benchmark index via a physical replication. These funds offer a transparent exposure to the underlying benchmark index.

To apply exclusion or a stock selection based on ESG criteria would imply to diverge from the benchmark and a higher tracking error.

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2\*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO2e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 8%  
Yellow Flag 22%  
Green Flag 70%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	98%
74	100	84	Scope 1 reported (vs estimated)	77%
			Scope2 reported (vs estimated)	69%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon

Fossil Fuel Reserves	5%
Thermal Coal	4%
Natural Gaz	4%
Oil	3%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000

Thermal Coal (Tons)	40
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0002

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	298.7
Thermal Coal	73.1
Oil	86.8
Gas	53.9
Total	517.8

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	73.1
Oil Sands	4.1
Shale Oil or Shale Gas	6.8
Sum High Impact Reserves	84.0
Other	433.7

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	1.0%	0.1%	2.4%
Some efforts	74.2%	88.1%	72.2%
Limited efforts/information	5.2%	11.7%	2.3%
No effort/No evidence	19.7%	0.0%	23.1%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

2.8%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	9.4%
Liquid Fuel	1.6%
Natural Gas	52.7%
Nuclear	8.0%
Renewables	1.5%
Thermal Coal	26.8%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	36%
20-49.9%	2%
50-100%	1%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	25.4%
Energy Efficiency	37.2%
Green Building	7.1%
Pollution Prevention	10.7%
Sustainable Water	9.1%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.4%
Energy Efficiency	2.8%
Green Building	0.2%
Pollution Prevention	0.4%
Sustainable Water	0.2%

## Physical Risk Corporate

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

#### **Lyxor's best selection and execution policy**

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

#### **Transparency of securities financing operations and reuse of financial instruments SFTR regulation**

*(Accounting currency of the CIU)*

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## 1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters fixing the day of closing of the Compartment's net asset value.

#### Posting method for the trading fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Valuation methods for off-balance sheet commitments

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule, rate
Financial management fees and administrative expenses external to the management company <sup>(1)</sup>	Net assets	maximum 0.45% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	Amount of income generated by these operations	20% maximum for the Management Company; 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in JPY.

**Indication of accountancy changes declared to each of the shareholders individually**

### 3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency in which the accounting is maintained.*

By main currency	EUR	-	-	Other currencies
<b>Assets</b>				
Deposits	-	-	-	-
Equities and similar securities	-	-	-	-
Bonds and similar securities	-	-	-	-
Debt securities	-	-	-	-
CIU	-	-	-	-
Temporary financial securities operations	-	-	-	-
Receivables	41,429,020,537	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Sale operations on financial instruments	-	-	-	-
Temporary financial securities operations	-	-	-	-
Debts	3,218,315,461	-	-	-
Financial accounts	19,299,92,853	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the "other receivables" and "other debts" items, notably breakdown of the future currency exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>45,473,451,797</b>
Future currency exchange operations:	
Future purchases of currency	3,244,096,083
Total negotiated amount of future currency sales	41,429,020,537
Other receivables:	
Coupons receivable	724,137,601
Deferred settlement sales	15,345,019
Security deposits	13,770,000
Other receivables	45,962,729
Other operations	-
<b>Debts</b>	<b>47,136,833,611</b>
Future currency exchange operations	
Future sales of currency	41,811,416,120
Total negotiated amount of future currency purchases	3,202,970,064
Other debts:	
Accrued expenses	37,784,489
Miscellaneous debtors and creditors	4,176,862
Deferred settlement purchases	15,345,397
Interim dividend to be paid	2,065,140,679
Other operations	-

**APPENDIX TO THE REPORT  
intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zürich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Compartment during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zürich Branch, Talacker 50, P.O. Box 1928, 8021 Zürich.

Calculation of the Total Expense Ratio(in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct.

Management commission of the fund: 0.45 % tax included

Average fortune of the fund for the period from 01/11/19 to 30/10/20: 103,151,109,719.00

Extract from the profit and loss account

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020
Management commission of the fund	672,611,552.00	242,640,221.00	462,692,131.00
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Custodian bank fee	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	672,611,552.00	242,640,221.00	462,692,131.00

**Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:**

TER including performance fee

$$(462,692,131.00 / 103,151,109,719) * 2.01 * 100$$

<b>Compartments / feeder</b>	LYXOR CAC 40 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification**

French equities.

At least 60% of the Lyxor CAC 40 (DR) UCITS ETF Compartment ("the Compartment") is permanently exposed in at least a French equity market.

The Compartment is an UCITS ETF type index fund.

### **Terms of determination and allocation of amounts available for distribution**

**Classes of Dist and J-EUR equity:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equity:** Capitalisation of all the amounts available for distribution.

### **Management objective**

The Compartment is a passively managed index-based UCITS.

The Compartment's management objective is to reproduce, both upwards and downwards, the evolution of the evolution of the CAC 40 GROSS TOTAL RETURN index (gross dividends reinvested) (the "Benchmark Indicator") listed in euros, while insofar as possible minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.05%.

### **Benchmark indicator**

The Benchmark Indicator is a free floating-weighted market capitalisation index measuring the performance of 40 stocks listed on the regulated markets of Euronext Paris.

Eligible stocks are chosen for their large market capitalisation, their sector representativeness and the large volume of transactions concerning them.

The Paris Bourse's main benchmark, its movements are highly correlated with those of the market as a whole.

The Benchmark Indicator is a "Gross Total Return" index, which means that the Benchmark Indicator's performance includes the gross dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: <https://www.euronext.com/en>

The monitored performance is that of the closing price of the Benchmark Indicator.

### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily at closing prices using the official closing prices of the stock exchanges on which the constituent securities are listed.

The Benchmark Indicator is also calculated in real time each day belonging to the Benchmark Indicator publication calendar.

The Benchmark Indicator's closing price is available on the website: <https://www.euronext.com/en>

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Euronext director of the Benchmark Indicator is listed on the register of directors and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

#### **Benchmark indicator revision and composition**

The composition of the Parent Index is reviewed quarterly.

The exact composition and revision rules of the Benchmark Indicator published by Euronext as well as information on the composition of the Benchmark Indicator are available on the website: <https://www.euronext.com/en>.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Investment strategy**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the French Monetary and Financial Code and, in particular, may enter into transactions involving the temporary sale of financial securities under the conditions described below.

On an ancillary basis, and always with the aim of seeking the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into forward financial instrument ("FFI") contracts. The FFIs entered into in this context may in particular be index futures contracts and/or hedging swaps entered into in order to minimise the level of tracking error of the Compartment.

The website [www.lyxoretf.com](http://www.lyxoretf.com) has a page dedicated to the Compartment, which allows investors to benefit from transparency on the direct replication method used (full replication of the Benchmark Indicator or sampling to limit replication costs). The frequency of any updates and/or the date on which the aforementioned information is updated is also indicated on the same page of the aforementioned website.

In managing its exposure, up to 20 % of the Compartment's assets may be exposed to equities of any one issuing body. This 20% limit may be increased to 35% for a single issuing entity where this is justified by exceptional market conditions, such as when certain securities are substantially dominant and/or in the case of high volatility of a financial instrument or securities related to an economic sector represented in the Benchmark Indicator. This could be the case in particular in the event of a public offer affecting one of the securities making up the Benchmark Indicator or in the event of a significant liquidity restriction affecting one or more financial instruments making up the Benchmark Indicator.

The Compartment is eligible with the PEA. The Compartment complies at all times with the asset constraints allowing it to be acquired within the framework of a PEA (Equity Savings Plan), i.e. the holding of more than 75% of the equities of companies that have their registered office in a Member State of the European Union or in another State party to the Agreement on the European Economic Area that has concluded a tax treaty with France that contains an administrative assistance clause to combat tax fraud and tax evasion.

The Compartment may be used as the basis for unit-linked life insurance policies.

In this case, the Manager intends to use mainly the following assets:

#### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will be mainly invested in equities making up the Benchmark Indicator.

Investment in undertakings for collective investment in transferable securities ("UCITS") which comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. The Manager will not invest in units or shares of AIF or other investment funds constituted under foreign law. In connection with such investments, the Compartment may subscribe for units or shares of UCITS managed by the Management Company or a company to which it is affiliated.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

In order to optimise the management of the Compartment in the future, the Manager reserves the right to use other instruments within the limits of the regulations in order to achieve its management objective.

### **3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, in order to seek the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also enter into FFI Contracts. Such FFI contracts may include, but are not limited to, index futures contracts and/or hedging swaps entered into in order to minimise Tracking Error of the Compartment.

The counterparty of the future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

### **7. Temporary securities acquisition and sale operations**

The Compartment may use efficient portfolio management techniques in accordance with the provisions of Article R214-18 of the Monetary and Financial Code, in particular through transactions involving the temporary sale of financial securities.

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment’s assets.
- Expected proportion of assets under management which may be subject to securities financing transactions: 0% of the Compartment’s assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the “Agent”). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment’s behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment’s behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments:

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.
- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment’s management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.
- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment’s gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment’s annual report.
- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect costs/expenses do not increase the Compartment’s overall operating costs/expenses they have been excluded from ongoing expenses.

**If necessary, the annual report of Multi Units France Sicav will provide the following information:**

- the exposure resulting from the use of efficient portfolio management techniques/transactions;
- the identity of the counterparty(ies) involved in these transactions;
- the nature and amount of any guarantee received to reduce the Compartment’s counterparty risk, and;
- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

## **8. Financial guarantees**

In all cases where the investment strategy employed involves a counterparty risk for the Compartment, in particular in connection with the Compartment's use of forward exchange contracts traded over-the-counter, the Compartment may receive securities which are treated as collateral in order to reduce the counterparty risk associated with such operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the COMPARTMENT may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the COMPARTMENT as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to or traded on a regulated market of an EU Member State, on a stock exchange of an OECD Member State or on a stock exchange of another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Guarantees received in a currency other than the Euro may be subject to an additional margin.

### **Reinvestment of received guarantees:**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument (FFI)) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

#### **Risk related to the use of efficient portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed.

Holder's attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

#### **Risks related to collateral management**

##### **Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

##### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

#### **Risk that the management objective may only be partially reached**

Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

##### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

##### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

##### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

##### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

### **Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

### **Risk related to the use of derivative instruments**

The Compartment may use forward financial instruments ("FFIs") traded over the counter or listed FFIs, in particular futures contracts and/or hedging swaps. These FFIs may involve a range of risks, at the contract level, including (but not limited to) the following: counterparty risk, hedging event, event affecting the Benchmark Indicator, tax regime risk, regulatory risk and liquidity risk. These risks may directly affect an FFI and may lead to an adjustment or even early termination of the FFI's contract, which may affect the net asset value of the Compartment.

Investment in FFIs may involve a high level of risk. The amount required to trade certain FFIs is potentially much lower than the exposure obtained through these instruments, which implies a "lever effect" at the level of each transaction. A relatively limited market movement would then have a proportionally very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is very volatile and can therefore be subject to significant variations.

The Compartment may use over-the-counter FFIs. Over-the-counter transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

### **Eligible subscribers and typical investor profile**

Acc and Dist equities of the Compartment are open to any subscriber.

J-EUR equities are open to any subscriber but are more particularly dedicated to institutional investors.

Investors subscribing to this Compartment wish to gain exposure to the French equity markets.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. To determine this amount, the investor should take into account his personal wealth and/or assets, his current and five-year financial needs, as well as his desire to take risks or, on the contrary, to favour a prudent investment. It is also recommended to diversify one's investments sufficiently so as not to expose them solely to the risks of this Compartment.

All investors are therefore invited to study their particular situation with their usual wealth management advisor.

The recommended minimum investment period is more than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available at the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The full compartment prospectus and the latest annual and periodical documents are sent within one week upon written request by the holder to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Date of creation of the Multi Units France Sicav: 4 March 2002.*
- *Date of approval by the AMF: 1 December 2000, modified on 15 November 2001.*
- *Date of approval of the transformation of the MF: 7 November 2003.*
- *Date of AMF approval of the Compartment: 6 June 2018.*
- *Date of creation of the Fund: 13 December 2000.*
- *Date of creation of the Compartment: 5 September 2019.*

## Activity report

The fund replicates the performance of the CAC 40 Total Return Index EUR (Ticker:CACR).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance from 31/07/19 to 31/10/19			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor CAC 40 (DR) UCITS ETF - Dist	FR0007052782	EUR	-18.07% <sup>(1)</sup>	-17.94%		36.19%
Lyxor CAC 40 (DR) UCITS ETF - J-EUR	FR0011122233	EUR	-18.07% <sup>(1)</sup>	-17.94%		104.92%
Lyxor CAC 40 (DR) UCITS ETF - Acc	FR0013380607	EUR	-18.07% <sup>(1)</sup>	-17.94%		-1.20%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- sampling techniques or efficient portfolio management techniques.”

The Tracking Error is 0.0521% for the sub-fund. The Tracking Error target for the year was 0.05%.

The realized tracking error level is above the anticipated tracking error level. This difference is considered as immaterial.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-18-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2\*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

LYXOR CAC 40 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR CAC 40 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2020

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores: Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 30%  
Yellow Flag 48%  
Green Flag 20%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
108	235	146	Scope 1 reported (vs estimated)	99%
			Scope2 reported (vs estimated)	96%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)\*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	9%
Thermal Coal	0%
Natural Gaz	8%
Oil	8%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0020
Oil (MMBOE)	0.0018

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	127.9
Thermal Coal	0.0
Oil	815.8
Gas	661.3
Total	1 605.0

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

IC02e/\$M Invested	
Thermal Coal	0.0
Oil Sands	150.1
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	150.1
Other	1 455.0

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	11.9%	5.7%
Some efforts	100.0%	88.1%	83.8%
Limited efforts/information	0.0%	0.0%	2.6%
No effort/No evidence	0.0%	0.0%	7.9%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	8.9%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	19.0%
Liquid Fuel	1.1%
Natural Gas	43.9%
Nuclear	15.5%
Renewables	12.3%
Thermal Coal	7.3%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	26%
20-49.9%	8%
50-100%	1%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	23.8%
Energy Efficiency	21.4%
Green Building	3.8%
Pollution Prevention	6.4%
Sustainable Water	6.2%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.8%
Energy Efficiency	3.5%
Green Building	0.4%
Pollution Prevention	0.1%
Sustainable Water	0.3%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	3.1%	95.0%	2.0%	75.0%	19.0%	6.0%
Carbon Emissions	3.0%	47.8%	49.2%	79.3%	10.1%	10.6%
Electronic Waste	5.6%	6.2%	88.2%	99.3%		0.7%
Opportunities in Green Building	3.7%	54.7%	41.6%	99.4%	0.2%	0.4%
Opp's in Renewable Energy	8.2%	76.1%	15.7%	97.5%		2.5%
Packaging Material & Waste	10.4%	45.5%	44.1%	92.8%		7.2%
Water Stress	1.6%	75.2%	23.2%	31.9%	43.5%	24.6%
Toxic Emissions & Waste				33.2%	46.8%	20.0%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	44
Number of Voted Meetings	41
Participation rate at General Meetings	93.2%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
Routine/Business	95.5%	4.5%	0.0%
Directors Related	91.4%	8.6%	0.0%
Non-Salary Comp.	87.7%	10.0%	2.3%
Capitalization	93.2%	6.8%	0.0%
Antitakeover Related	50.0%	50.0%	0.0%
Reorg. and Mergers	68.2%	31.8%	0.0%
Shareholders Proposals	8.3%	83.3%	8.3%

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor CAC 40 (DR) UCITS ETF fund participated during the financial year.

France	90.2%
Netherlands	7.3%
Luxembourg	2.4%

## Disclaimer

This document is solely intended for investors qualified as "eligible counterparties" or "professional clients" as defined in MIFID (Directive 2004/39/EC).

This document is for informational purposes only and does not constitute, an offer to buy or sell or a solicitation or investment advice, and must not be used as a basis or be taken in account for any contract or commitment.

The information contained in this document is established on extra financial data basis available from various reputable sources. However, validity, accuracy, exhaustiveness, relevance and completeness of this information are not guaranteed by the portfolio management company. In addition, this information is subject to change without any prior notice and the portfolio management company shall not be obligated to update or revise the document.

The information was issued at a given time, and is therefore likely to vary at any time.

The portfolio management company disclaims any and all liability relating to information contained in this document and to a decision based or on reliance on this document.

Persons receiving this document undertake to use the information contained therein in the limit of the sole assessment of their own interest.

Any partial or total reproduction of the information or the document is subject to the prior express authorization of the portfolio management company.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

*(Accounting currency of the CIU)*

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## Efficient portfolio management techniques and derivative financial instruments

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the date of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the net asset value calculation date. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the net asset value calculation date. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for UCITS for operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published by the WM Reuters on the same day of the closing date of the Compartment's net asset value.

# appendix

**Posting method for the negotiation fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the coupon received.

**Financial instruments received as collateral**

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule rate</b>
Financial management fees and administrative fees external to the management company, including tax <sup>(1)</sup>	Net assets	maximum 0.25% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commission	Collection on each transaction	None
Outperformance commission	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Classes of Dist and J-EUR equity:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc equity:** Capitalisation of all the amounts available for distribution.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR EURO STOXX 50 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR EURO STOXX 50 (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

Eurozone countries equities.

At least 60% of the Lyxor Euro Stoxx 50 (DR) UCITS ETF Compartment (the "Compartment") is permanently exposed in a foreign equity market or in equity markets of several Eurozone countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Dist, K-EUR, J-EUR, Daily Hedged to USD - Dist, Daily Hedged to GBP - Dist, Daily Hedged to CHF - Dist equities:** The Board of Directors reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

**Class of Acc, Daily Hedged to USD - Acc, Daily Hedged to GBP - Acc, Daily Hedged to CHF - Acc equities:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The Compartment's management objective is to replicate the performance, whether positive or negative, of the EURO STOXX 50<sup>®</sup> NET RETURN index (net dividends reinvested) (the "Benchmark Indicator"), listed in euros and representative of the performance of 50 blue chips in the Eurozone market, while minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.50%.

### **Benchmark indicator:**

The Benchmark Indicator is a subset of the EURO STOXX index. It is composed of the 50 most important securities of the Eurozone member countries. These securities are chosen for their equity market capitalisation, their liquidities and their sector-based representativeness. The Benchmark Indicator strives to maintain a weighting per country and per economic sector that, insofar as possible, reflects the economic structure of the Eurozone.

### **Benchmark indicator publication**

The composition of the Benchmark Indicator is reviewed each year.

The Benchmark Index is a "Net Return" index, i.e. which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: <http://www.stoxx.com/indices/>.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

In accordance with the provisions of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the STOXX Ltd. administrator of the Benchmark Indicator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

#### **Benchmark indicator revision and composition**

The monitored performance is that of the closing prices of the index.

The complete methodology is available on the website: [www.stoxx.com/indices/](http://www.stoxx.com/indices/)

#### **Investment strategy:**

##### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will use a direct replication method, which means that the Compartment will invest mainly in securities making up the Benchmark Indicator.

In order to optimise the direct replication method that is used to track the Benchmark Indicator, the Compartment, represented by the Management Company, may decide to employ a “sampling” technique that consists in investing in a selection of representative Benchmark Indicator constituents in order to reduce the costs of investing directly in all of the various Benchmark Indicator constituents. This sampling technique could cause the Compartment to invest in a selection of representative Benchmark Indicator securities (and not in all of them) in proportions that do not reflect their weight within the Benchmark Indicator, and even to invest in securities that are not constituents of the Benchmark Indicator.

To achieve the highest possible correlation with the performance of the Benchmark Indicator, the Compartment may also, on an ancillary basis, engage in transactions involving Future Financial Instrument (“FFI”). These transactions could for example be futures contracts on indices and/or hedging swaps in particular to minimise the Compartment’s tracking error.

To ensure transparency on the use of the direct index replication method (i.e. either full replication of the Benchmark Indicator or sampling to limit replication costs) and on its consequences in terms of the assets in the Compartment’s portfolio, information on the updated composition of the basket of balance sheet assets in the Compartment’s portfolio is available on the page dedicated to the Compartment accessible on Lyxor’s website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

The Compartment will invest permanently at least of 75% of its assets in companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

##### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009. The Compartment will be mainly invested in securities making up the Benchmark Indicator.

The investment in undertakings for collective investment in transferable securities (“UCITS”) compliant with the Directive 2009/65/EC is limited to 10% of the assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section’s paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

On an ancillary basis, the Compartment may use FFIs traded on a regulated market or over the counter.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to FFIs, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowing.

### **7. Temporary securities acquisition and sale operations**

The Compartment may have recourse to various techniques to manage its portfolio efficiently in compliance with Article R214-18 of the French Monetary and Financial Code and in particular temporary securities sale operations.

- Maximum proportion of assets under management which may be subjected to securities financing transactions: up to 25% of the Compartment's assets.

- Expected proportion of assets under management which may be subject to securities financing transactions: 10% of the Compartment's assets.

For this purpose, the Management Company has appointed Société Générale as intermediary (hereinafter the "Agent"). In the event of the use of temporary assignments, the Agent may be authorised to (i) lend securities, on the Compartment's behalf, under framework agreements, such as global master securities lending agreements (GMSLA) and/or any other internationally recognised framework agreement, and (ii) invest, on the Compartment's behalf, any liquid assets received as guarantee for these securities lending transactions, subject to the restrictions specified in the securities lending agreement, the rules of this prospectus and the applicable regulations.

As a reminder, the Management Company is an entity of the Société Générale group and is therefore linked to the Agent.

Where Société Générale S.A. is appointed as Agent, it is not authorised to act as a counterparty in securities lending transactions in the event of recourse to such temporary assignments:

- The Compartment shall be entitled to all income from the temporary disposal of securities, net of any direct and indirect operating costs.

- These operating costs/expenses, which are incurred to manage the portfolio more efficiently, may be borne by the Compartment's management company, the Agent (where applicable) and/or other intermediaries that are involved in these transactions.

- These direct and indirect operating costs/expenses will be calculated as a percentage of the Compartment's gross income. Information on direct and indirect operating costs/expenses and on the entities to which these costs/expenses are paid will be provided in the Compartment's annual report.

- All income obtained from the lending of securities (from which must be deducted all direct and indirect operating costs/expenses borne by the Agent and if applicable by the management company) shall be paid to the relevant Compartment. Since these direct and indirect operating costs/expenses do not increase the Compartment's overall operating costs/expenses they have been excluded from ongoing expenses.

If necessary, the Compartment's annual report will provide the following information:

- the exposure resulting from the use of efficient portfolio management techniques/transactions;

- the identity of the counterparty(ies) involved in these transactions;

- the nature and amount of any guarantee received to reduce the Compartment's counterparty risk, and;

- the income generated by efficient portfolio management techniques over the relevant period, and any associated direct and indirect operating costs or expenses.

### **8. Financial guarantees**

In all cases where the investment strategy used exposes the Compartment to counterparty risk, in particular in connection with temporary purchases and sales of securities, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations.

The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases.

The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt towards the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees.**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- i) Deposited in an authorised institution;
- ii) Invested in high-quality government bonds;
- iii) Used for reverse repurchase transactions, provided that these are entered into with credit institutions that are subject to prudential supervision and that the UCITS is able to withdraw the total amount of its cash collateral and the accrued interest at any time;

iv) Invested in short-term money market funds that meet the guidelines for a common EU definition of money market funds.

The reinvestment of cash collateral must meet the diversification requirements that apply to non-cash collateral.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

#### **Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

##### **- Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

##### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

##### **- Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for future financial instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

##### **- Risk arising from a lack of perfect replication**

Replicating the performance of the Benchmark Indicator by investing in all of its constituents may prove to be very difficult to implement and costly. The Compartment manager may therefore use various optimisation techniques, such as ‘sampling’, which consists in investing in a selection of representative securities (and not all securities) that constitute the Benchmark Indicator, in proportions that differ from those of the Benchmark Indicator or even investing in securities that are not index constituents and derivatives. The use of such optimization techniques may increase the ex post tracking error and cause the Compartment to perform differently from that Benchmark Indicator.

##### **- Liquidity risk on a place of listing**

The Compartment’s share price can deviate from its indicative net asset value. The liquidity of the Compartment’s equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or

- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs"). It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**- Risk related to the use of effective portfolio management techniques:**

In the event that the counterparty to the efficient portfolio management technique (hereinafter referred to as the "EPMT") processed by the If the Compartment fails to do so, the Compartment may incur a risk in the event that the value of the guarantees received by the Compartment is insufficient. Compartment would be less than the value of the assets of the Compartment transferred to the counterparty under the EPMT concerned. This risk could materialize in particular in the event of (i) a poor valuation of the securities covered by this transaction and/or (ii) adverse market movements and/or (iii) a deterioration in the issuers' credit ratings securities received as collateral and/or (iv) market illiquidity on which the collateral received is listed. Holders' attention is drawn to the fact that (i) EPMT s could be concluded with Société Générale (an entity of the same name group as the Management Company) and/or (ii) that Société Générale could be appointed as agent of the Compartment in the EPMT framework.

**- Risks related to collateral management**

**Operational risk:**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk:**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment can enter into transactions involving over-the-counter Future Financial Instrument (FFI), such as swaps, in order to secure the performance of the Benchmark Indicator. These FFI involve various risks, such as These FFI involve various risks, such as counterparty risk, hedging disruption, Benchmark Indicator disruption, taxation risk, regulatory risk, operational risk and liquidity risk. These risks can materially affect an FFI and may require an adjustment of the FFI transaction or even its premature termination, which could adversely affect the Compartment's net asset value.

Investing in FFIs may involve a high level of risk. The amount required to trade in some FFIs is potentially much less than the exposure obtained through these instruments, which implies a "leverage effect" at the level of each transaction. A relatively small market movement would then have a proportionately very high impact, which may be favourable or unfavourable to the Compartment.

The market value of FFIs is highly volatile and may therefore be subject to wide fluctuations.

The Compartment may use over-the-counter (OTC) FFIs. OTC transactions may be less liquid than transactions traded on organized markets, where trading volumes are generally higher and prices may be more volatile.

**- Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value. "Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution;
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index;
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator;
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost;
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid.
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**- Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**- Risk related to the exchange hedging specific to the Daily Hedged to classes of USD - Acc and Dist equities:**

In order to hedge the USD/EUR exchange risk on the class of Daily Hedged to USD - Dist and Daily Hedged to USD - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class. Because of the daily implementation of this hedge and of its imperfection, Daily Hedged to USD - Acc and Daily Hedged to USD - Dist equities classes can therefore be subject to downward market movements that will impact on the unit's net asset value.

**- Risk related to the exchange hedging specific to the classes of Daily Hedged to GBP - Acc and GBP - Dist equities:**

In order to hedge the GBP/EUR exchange risk on the class of Daily Hedged to GBP - Dist and Daily Hedged to GBP - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class.

Because of the daily implementation of this hedge and of its imperfection, Daily Hedged to GBP - Acc and Daily Hedged to GBP - Dist equities classes can therefore be subject to downward market movements that will impact on the unit's net asset value.

**- Risk related to the exchange hedging specific to the classes of Daily Hedged to CHF - Acc and CHF - Dist equities:**

In order to hedge the CHF/EUR exchange risk on the class of Daily Hedged to CHF - Dist and Daily Hedged to CHF - Acc equities, the Compartment uses a hedging strategy intended to reduce the impact of the evolution between the currency of the Benchmark Indicator and the currency of the equity class. Because of the daily implementation of this hedge and of its imperfection, classes of Daily Hedged to CHF - Acc and Daily Hedged to CHF - Dist equities can therefore be subject to downward market movements that will impact on the unit's net asset value.

**Subscribers concerned and profile of the typical investor:**

The Compartment is open to any subscriber.

The classes of J-EUR, K-EUR equities are intended for institutional investors whose initial subscription is at least equal to 100,000 Euros.

Class K-EUR and J-EUR shareholders must hold on each Net Asset Value date a minimum of \$100,000 Euros of shares or buy back their entire position in the K-EUR and J-EUR shares.

The investor subscribing to this Compartment wishes to gain exposure to the equity markets of the Eurozone.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. In determining this, the investor will have to take into account his wealth and/or personal assets, his current and five-year money needs, but also his desire to take risks or, on the contrary, to favour a prudent investment. It is also recommended to sufficiently diversify its investments in order to avoid exposing them solely to the risks of this Compartment.

All investors are therefore invited to study their particular situation with their usual wealth management advisor. The recommended minimum investment period is more than 5 years.

“U.S. Persons” (as defined in the prospectus - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

*The net asset value is available at the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The complete compartment prospectus and the latest annual and periodical documents are sent within one week upon written request by the holder to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*

- *Date of creation of the Sicav Multi Units France: 4 March 2002.*
- *Date of AMF approval of the compartment: 6 June 2018.*
- *Date of creation of the compartment: 20 September 2018.*

## Activity report

The fund replicates the performance of the EURO STOXX 50 R EUR index (Ticker: SX5T).

### Performance trend at the closing date:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to GBP - Acc	FR0012399772	GBP	-15.43% <sup>(1)</sup>	-15.47% <sup>(2)</sup>		6.52%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to USD - Acc	FR0012399806	USD	-15.63% <sup>(1)</sup>	-15.93% <sup>(2)</sup>		26.87%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Dist	FR0007054358	EUR	-15.88% <sup>(1)</sup>	-16.21%		19.20%
Lyxor EURO STOXX 50 (DR) UCITS ETF - Daily Hedged to CHF - Acc	FR0012399731	CHF	-15.98% <sup>(1)</sup>	-16.12% <sup>(2)</sup>		-8.00%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- income related to securities financial transactions;
- sampling techniques or efficient portfolio management techniques.”

<sup>(2)</sup> “The relevant benchmark for comparison is the hedged Index.”

The Tracking Error is 0.1644% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1<sup>a</sup>-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2\*)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,

- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,

- MSCI and Sustainalytics ESG research to integrate ESG issues,

- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3<sup>a</sup>a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2<sup>a</sup>-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2\*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),

- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

LYXOR EURO STOXX 50 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR EURO STOXX 50 (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2020

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 3%  
Orange Flag 30%  
Yellow Flag 45%  
Green Flag 22%

LYXOR EURO STOXX 50 (DR) UCITS ETF

Climate Risks & Energy Transition

Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
76	180	188	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	98%
			Scope 1& 2 estimations are based on MSCI methodology	

Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gaz	0%
Oil	0%

Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0018
Oil (MMBOE)	0.0013

Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	569.8
Gas	510.0
Total	1 079.8

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

ICD2e\$M Invested	
Thermal Coal	0.0
Oil Sands	75.2
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	75.2
Other	1 004.4

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	2.7%	7.8%	13.6%
Some efforts	93.7%	90.3%	78.6%
Limited efforts/information	0.0%	0.0%	3.3%
No effort/No evidence	3.6%	1.8%	4.6%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	9.8%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	19.8%
Liquid Fuel	3.6%
Natural Gas	37.5%
Nuclear	14.1%
Renewables	17.3%
Thermal Coal	7.7%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	26%
20-49.9%	3%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	18.8%
Energy Efficiency	21.4%
Green Building	1.7%
Pollution Prevention	4.4%
Sustainable Water	5.5%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.8%
Energy Efficiency	2.2%
Green Building	0.1%
Pollution Prevention	0.1%
Sustainable Water	0.1%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High
Biodiversity & Land Use	2.7%	93.0%	4.3%	73.7%	21.2%	5.1%
Carbon Emissions	2.5%	47.0%	50.4%	79.2%	9.6%	11.2%
Electronic Waste	4.0%	17.3%	78.7%	99.3%		0.7%
Opportunities in Green Building	3.6%	57.9%	38.6%	98.7%	1.3%	
Opp's in Renewable Energy	7.5%	82.4%	10.1%	95.5%	1.3%	3.2%
Packaging Material & Waste	11.6%	42.0%	46.4%	91.8%		8.2%
Water Stress	8.7%	63.6%	29.7%	49.2%	29.5%	21.3%
Toxic Emissions & Waste				41.1%	40.0%	18.8%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention
------------	-----	---------	------------

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor EURO STOXX 50 (DR) UCITS ETF fund participated during the financial year.

Any partial or total reproduction of the information or the document is subject to the prior express authorization of the portfolio management company.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

#### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

#### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

#### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

*(Accounting currency of the CIU)*

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## Effective portfolio management techniques and derivative financial instruments

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities in undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

# appendix

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM/Reuters on the same day of the Compartment's net asset value date.

#### Posting method for the trading fees

The chosen method is that of excluded fees.

#### Posting method of incomes from fixed income securities

The chosen method is that of the collected coupon.

#### Financial instruments received as collateral

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

#### Assessment methods for off-balance sheet commitments

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

#### Operation and management fees

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transfer commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment;
- Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities;

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

Fees invoiced to the Compartment	Basis	Schedule rate
Financial management fees and administrative fees external to the portfolio management company including tax <sup>(1)</sup>	Net assets	maximum 0.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None
Direct and indirect operational costs/expenses related to temporary acquisitions and sales of securities	The amount of the transaction	20% maximum for the Management Company; 15% maximum for the Agent

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>237,195,193.52</b>
Future currency exchange operations:	
Future purchases of currency	16,153,717.13
Total traded amount of future Sales of currencies	182,385,049.65
Other receivables:	
Coupons receivable	1,500,532.62
Deferred settlement purchases	3,672,738.82
Deferred settlement sales	119,032.27
Security deposits	27,361,849.39
Other receivables	6,002,273.64
Other operations	-
<b>Debts</b>	<b>215,413,896.72</b>
Future currency exchange operations:	
Future sales of currencies	181,627,137.83
Total traded amount of future Purchases of currencies	16,266,008.46
Other debts:	
Accrued expenses	731,330.76
Deferred settlement sales	3,672,833.41
Miscellaneous debtors and creditors	13,075,214.74
Advance	26,547.79
Redemption	-
Other operations	-

**APPENDIX TO THE REPORT  
intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

Average assets of the fund for the period  
from 01/11/19 to 30/10/20: 4,886,486,416.98

UCITS management commission: 0.20 % including tax

Excerpt from the income statement

Expenses in euros	Half-yearly report 31/10/2019	Annual report 30/04/2020	Half-yearly report 30/10/2020
Fund management commission	11,457,269.86	5,037,044.84	9,747,829.01
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	11,457,269.86	5,037,044.84	9,747,829.01

**Calculation of the TER for 12 months, from 01/11/19 to 30/10/20:**

TER, including performance fee

$$(9,747,829.01 / 4,886,486,416.98) * 100$$

0.20 %

Performance fee as a share in percentage of the net average assets:

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartments / feeder</b>	LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Terms of determination and allocation of amounts available for distribution:**

**Class of Acc equity:** Capitalisation of all the amounts available for distribution.

**Class of Dist equity:** The Board of directors reserves the right to distribute all or part of the result once or several times a year and/or to capitalise them. The realised net capital gain will be capitalised.

### **Management objective:**

The Compartment is a passively managed index-based UCITS.

The management objective of this Compartment is to replicate the upwards or downwards evolution of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) ("Benchmark Indicator") listed in euros (EUR) while insofar as possible minimizing the tracking error between the Compartment's performances and those of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.5%.

### **Benchmark indicator:**

The Benchmark Indicator is a "Total Return" type index (i.e. all coupons detached by the components of the Benchmark Indicator are reinvested in the Benchmark Indicator).

The Benchmark Indicator is composed of bonds issued by the governments of the Eurozone countries, weighted by country and representing a full spectrum of maturities.

To be eligible for inclusion in the Benchmark Indicator, bonds must meet the following criteria:

- (i) They must pay a fixed rate of interest on a principal amount that will be fully repaid upon maturity, be denominated in euros, be non-convertible and incorporate no options;
- (ii) They must have been issued by a Eurozone member state selected by FTSE MTS from the list of countries having been attributed an Investment Grade credit rating by at least two of the three credit rating agencies, Standard & Poor's, Moody's and Fitch;
- (iii) They must be traded on the MTS platform;
- (iv) The minimum bond issuance size is two billion euros.

The performance tracked is that of the Benchmark Index's closing price at 5:15 pm CET.

### **Benchmark indicator publication**

The closing price of the Benchmark Indicator is available on the website: [www.ftserussell.com/](http://www.ftserussell.com/).

In accordance with Article 52 of Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Director shall FTSE TMX Global Debt Capital Markets Inc. of the benchmark index FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) has until 01.01.2020 to apply for an approval or a registration, if applicable.

As of the date of the last update of this prospectus, the administrator of the Benchmark Indicator has not yet been registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

**Benchmark indicator revision and composition**

The Benchmark Indicator's composition is revalued and rebalanced monthly.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components will be available on the website: [www.ftserussell.com/](http://www.ftserussell.com/).

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

**Investment strategy:**

**1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The Compartment's securities will be mainly global equities, in all economic sectors and listed in all markets, including small-cap markets.

The Compartment will invest permanently at least of 75% of its assets in equities of companies that have their head office in a Member State of the European Union or in another State that is a party to the treaty on the European Economic Area and that has signed with France a tax agreement containing an administrative assistance clause for the purposes of combating fraud or tax evasion. This minimum holding level provides for eligibility for a Stock Savings Plan.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed, for up to 20% of its assets, to debts issued by an OECD member State. This 20% limit can be increased to 35% for a single bond when this proves to be justified by exceptional market conditions, notably when certain securities are excessively dominant and/or in case of high volatility of a debt issue, or in case of a political and/or economic event that is having or could have an incidence on the assessment of an issuing State's debt and/or that could affect an issuing State's credit rating, or any other event likely to affect the liquidity of a financial security included within the Benchmark Indicator.

Notwithstanding the hypotheses indicated in the above paragraph, securities guaranteed or issued by a same issuer can represent up to 35% of the assets, and 100% of the assets if the Compartment holds at least 6 debt issues, none of which exceeds 30% of the assets. The securities are financial instruments issued or guaranteed by an OECD member State, the local or regional authorities of a European Union Member State, or a party to the EEA agreement.

Interest rate sensitivity range within which the UCITS is managed:	Between 5 and 10
Currencies in which securities held by the Compartment is exposed:	Euro: between 0 and 100% of net assets Other: between 0 and 10% of net assets
Level of foreign exchange risk borne by the Compartment:	Up to 0% of net assets
Geographical area of issuers of securities to which the Compartment is exposed:	Geographical area: Eurozone: 0% to 100% of net assets Emerging countries: 0% to 10% of net assets

In the present case, the financial management delegatee intends to use primarily the following assets:

## **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation of the international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

The aforementioned equities will be chosen on the basis of criteria:

- of eligibility, in particular:

o subordination to the main market indices;

o liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);

o rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent);

- of diversification, in particular:

o Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);

o Geographical area;

o Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets of the Compartment. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law.

When the Compartment receives guarantee in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

## **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps negotiated over-the-counter, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

The counterparty of the aforesaid future financial instruments (the "Counterparty") will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

When Société Générale acts as a counterparty to forward financial instruments, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

## **4. Securities with integrated derivatives**

None.

## **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

## **6. Cash borrowing**

Up to a maximum of 10% of its net assets, the Compartment may have temporarily recourse to loans.

## **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

## **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

## **Policy related to discounts**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

### **Reinvestment of received guarantees**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the Compartment may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or temporary acquisitions and sales of securities), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

### **Counterparty selection policy:**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile:**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **- Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the initial investment may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **- Interest rate risk**

The price of a bond is affected by changes in interest rates. The price of most bonds increases when interest rates decline and decreases when interest rates rise. Bonds with relatively long maturities (which is the case of those in the Benchmark Indicator) are more sensitive to changes in interest rates and are therefore more volatile investments than bonds with shorter maturities.

#### **- Credit risk**

In case of the deterioration of the rating affecting one or more issuers of the bonds comprising the Benchmark Indicator, the Compartment could be affected. This deterioration could imply a heightened risk of default on the part of the issuer of the bond in question, and could result in a depreciation of this bond's value.

#### **- Counterparty risk**

The Compartment is particularly exposed to counterparty risk resulting from its use of OTC financial contracts (hereinafter referred to as "OTC derivatives") and/or efficient portfolio management techniques (hereinafter referred to as "EPMTs").

It is exposed to the risk of bankruptcy, non-payment or any other type of default by any counterparty with which it has entered into an OTC Derivative and/or a EPMT. In the event of default by the counterparty, the OTC Derivative and/or the EPMT may be terminated early and the Compartment may, if necessary, enter into another OTC Derivative and/or EPMT with a third party counterparty, at the market conditions prevailing at the time of the occurrence of this event. In particular, the realization of this risk may result in losses for the Compartment and have an impact on the ability of the Compartment to achieve its management objective. In accordance with the regulations applicable to a UCITS, the counterparty risk may not exceed 10% of the total value of the Compartment's assets per counterparty.

**- Risks related to collateral management**

**Operational risk:**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

**Legal risk:**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

**- Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for Future Financial Instrument (“FFI”)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of units.

**- Liquidity risk on a place of listing**

The ETF's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

**- Currency risk linked to the Compartment listing**

The Compartment may be listed on certain markets of multilateral trading facilities in a currency other than that of the Benchmark Indicator. Investors buying the Compartment in a currency other than that of the Benchmark Indicator are exposed to currency risk. Therefore, the value of the investment made in a currency other than that of the Benchmark Indicator may be reduced in spite of an increase of the value of the benchmark Indicator, due to exchange rate fluctuations.

**- Risk that the Compartment's management objective may only be partially reached:**

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

**- Risk related to the use of derivative instruments**

In order to reach its investment objective, the Compartment uses Future Financial Instrument (“FFI”) negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

**- Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

**- Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

**- Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

**- Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

**- Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to its formula or calculation method (other than a minor modification such as the adjustment of the underlyings used with this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator's performance.

**- Risk linked to a transaction involving securities comprising the Benchmark Indicator**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Eligible subscribers and typical investor profile:**

The Compartment is open to any subscriber.

The investor who subscribes in this Compartment wishes to gain exposure to the performance of the investment grade bond segment of the Eurozone both upwards and downwards.

The amount that it is reasonable to invest in this Compartment depends on each investor's personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for the next five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

"U.S. Persons" (as defined in the prospectus - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

## Activity report

The fund replicates the performance of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) EUR (Ticker:FMMPIEG5).

### **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor PEA Obligations d'État Euro UCITS ETF – Acc	FR0013346681	EUR	2.32% <sup>(1)</sup>	2.73%		11.10%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

The Tracking Error is 0.0035% for the sub-fund. The Tracking Error target for the year was 0.5%.

The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

### **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

### **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

### **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

•Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

•Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag	0%
Orange Flag	0%

Green Flag	0%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
0	0	209	Scope 1 reported (vs estimated)	0%
			Scope 2 reported (vs estimated)	0%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	0%
Thermal Coal	0%
Natural Gas	0%
Oil	0%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

1CO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	0.0%
Some efforts	0.0%	0.0%	0.0%
Limited efforts/information	0.0%	0.0%	0.0%
No effort/No evidence	0.0%	0.0%	0.0%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	Liquid Fuel
Natural Gas	Nuclear
Renewables	Thermal Coal

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	0%
20-49.9%	0%
50-100%	0%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	0.0%
Energy Efficiency	0.0%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.0%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	0.0%
Energy Efficiency	0.0%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.0%

### Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

www.climate-change-performance-index.org

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score	53.1
Level	Medium

### Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score	7.3
-------	-----

### Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

(Source: Vulnerability Index)

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

**LYXOR PEA OBLIGATIONS D'ÉTAT EURO UCITS ETF**  
(compartment of the Multi Units France Sicav)

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

**Breakdown of the fixed and variable compensation for the financial year**

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No "carried interest" was paid during the financial year.

## 1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of undertakings for collective investment in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.

Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

The exchange rates used for the assessment of financial instruments denominated in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the closing of the Compartment's net asset value.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives. They are invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management fees and administrative fees external to the portfolio management company <sup>(1)</sup>	Net assets	Maximum 0.40% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transactions commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in Euros.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

**Class of Acc equity:** Capitalisation of all the amounts available for distribution.

**Class of Dist equity:** The Board of directors reserves the right to distribute all or part of the result once or several times a year and/or to capitalise them. The realised net capital gain will be capitalised.

appendix

The Compartment in no way benefits from the sponsorship, support or promotion, and is not sold by FTSE TMX Global Debt Capital Markets Inc. FTSE TMX Global Debt Capital Markets Inc cannot be held liable for the promotion or marketing of the Compartment.

FTSE MTS and the names of the FTSE MTS index (FTSE MTS Index<sup>TM</sup>) and of the FTSE MTS indices (FTSE MTS Indices<sup>TM</sup>) are registered trademarks of FTSE TMX Global Debt Capital Markets Inc. The FTSE MTS indices are calculated by FTSE TMX Global Debt Capital Markets Inc, and marketed and distributed by MTSNext, a company owned by FTSE TMX Global Debt Capital Markets Inc.

Neither FTSE TMX Global Debt Capital Markets Inc nor MTSNext can be held liable for any losses or damages of any nature whatsoever (including, notably, investment losses) linked to all or part of the Compartment or to the supply of the FTSE MTS Eurozone Government Bond IG (Mid Price) Index (Ex-CNO Etrix) or of sub-indices or of registered trademarks.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI GREECE UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR MSCI GREECE UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification**

Equities of Eurozone countries.

At least 60% of the Compartment is permanently exposed in a foreign equity market or in equity markets of several Eurozone countries, possibly including the French market.

The Compartment is an UCITS ETF type index fund.

### **Terms of determination and allocation of amounts available for distribution:**

The Management Company reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### **Management objective**

The Compartment is a passively managed index-based UCITS.

The Compartment's investment objective is to replicate the performance, whether positive or negative, of the MSCI Greece IMI + Coca-Cola 20-35 Net Total Return Index denominated in EUR (the "Benchmark Indicator"), while minimising the tracking error between the Compartment's performance and that of the Benchmark Indicator.

The anticipated level of the ex-post tracking error under normal market conditions is 0.3%.

### **Benchmark indicator**

#### **Benchmark Indicator description**

The Benchmark Indicator is a "net dividends reinvested" index, which means that the Benchmark Indicator's performance includes the dividends paid by its underlying equities.

The Benchmark Indicator is an equity index weighted by market capitalization and adjusted for free-float. It is calculated and published by the international index provider MSCI Inc.

It is composed of the equities of companies that are domiciled and/or listed in Greece and which MSCI Inc. classifies as small-cap, mid-cap or large-cap on the basis of its criteria. The Benchmark Indicator is representative of the stock-market performance of companies that are domiciled and/or listed in Greece. It accounts for approximately 99% of the free-float adjusted market capitalisation of the universe of companies that are domiciled and/or listed in Greece.

The MSCI methodology and its calculation method entail the Benchmark indicator being made up of a variable number of companies.

A full description and the complete methodology used to construct the Benchmark Indicator and information on the composition and respective weightings of the Benchmark Indicator components are available on the website: [www.msci.com](http://www.msci.com).

The performance tracked is that of the Benchmark Indicator's closing price.

#### **Benchmark Indicator revision and composition**

The composition of the Benchmark Indicator is reviewed quarterly.

The exact composition and the revision rules of the Benchmark Indicator are available on the website: [www.msci.com](http://www.msci.com).  
The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Benchmark Indicator publication**

The value of the Benchmark Indicator and the list of its constituents are available on MSCI's website: [www.msci.com](http://www.msci.com).  
The Benchmark Indicator is calculated at the closing price each day, by using the official closing price of the listing market of the component securities.

The Benchmark Indicator is calculated in real time each trading day.

The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the website: [www.msci.com](http://www.msci.com).

The administrator of the Benchmark Index is MSCI Limited.

The administrator of the Benchmark Indicator is listed on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure for monitoring the reference indices used, describing the measures to be implemented in the event of changes to an index or discontinuance of the provision of that index.

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will employ an indirect replication method, which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. These swap contracts will serve to exchange (i) the value of the Compartment's assets, which will consist of cash and/or balance sheet assets (excluding any securities received as collateral), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com). The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to use primarily the following assets:

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including the small capitalisation markets.

**The aforementioned equities will be chosen on the basis of criteria:**

**Of eligibility, in particular:**

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities (“UCITS”) that comply with 2009/65/EC Directive is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds that were formed under a foreign law. As part of these investments, the Compartment can subscribe to units or equities of UCITS managed by the management company, or a company with which it is linked.

When the Compartment receives collateral in the form of securities, subject to the terms of section 8 below, it acquires full title to these securities and they are therefore included among the balance sheet assets to which it has full title.

As part of a future optimisation of the Compartment’s management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

**3. Off-balance sheet assets (derivative instruments)**

The Compartment will use derivatives, including over-the-counter index-linked swaps, exchanging the value of the Compartment’s assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to reach the management objective, for example including forward financial instruments other than index-linked swaps.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments (the “Counterparty”) will have no discretionary power regarding the composition of the Compartment’s investment portfolio, nor regarding the underlying assets of the future financial instruments.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowing**

Up to 10% of its net assets, the Compartment may have recourse, on a temporary basis, to cash borrowings in particular in order to optimise its cash management.

**7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary acquisition and/or sale operations involving securities.

**8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment’s use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets. In the event of default by the counterparty, the Compartment may dispose of the assets received from the counterparty in order to extinguish the counterparty's debt to the Compartment as part of the guaranteed transaction.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Fund may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and

such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the UCITS may recall at any time the global amount of liquidities taking into account the accrued interests;

(iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (TRS or EPMT), the Compartment may be forced to sell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the loss of the financial securities acquired as part of this reuse of the guarantees.

#### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

#### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the bearer is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the earnings.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of loss of the capital. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for Future Financial Instrument (FFI)) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

### **Counterparty risk**

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

### **Risks related to collateral management**

#### **Operational risk**

The Compartment may be subject to operational risk due to defaults or errors by the various parties involved in the collateral management of securities financing transactions and/or total return swaps contract (TRS). This risk arises only in connection with the management of securities financing transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

#### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap (TRS) as laid down in Regulation (EU) 2015/2365.

### **Risk related to the exposure to Emerging markets**

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the reference index.

### **Risk that the management objective may only be partially reached**

Nothing guarantees that the management objective will be reached. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the benchmark indicator, notably should one or more of the following risks arise:

#### **Risk related to the use of derivative instruments**

In order to reach its investment objective, the Compartment uses FFI negotiated over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator.

These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment and/or early termination of the FFI transaction, which could affect the Compartment's net asset value.

#### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

#### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

#### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

#### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

#### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

“Events affecting the Benchmark Indicator” are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market’s actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost,
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components negotiated over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator’s components are impacted by transaction costs relative to the execution, delivery versus payment or specific fiscal constraints, without these costs being reflected in the Benchmark Indicator’s performance.

#### **Securities transaction risk**

Should the issuer of a security underlying the index undertake an unanticipated review of a securities transaction (“ST”), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment’s counterparty in a future financial instrument), the Compartment’s net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST’s treatment in the methodology used by the Benchmark Indicator.

#### **Risk related to low diversification**

The Benchmark Indicator to which the investors are exposed only covers the market for bonds issued by the US government and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of a Benchmark Indicator that is exposed to several regions, sectors or strategies. The exposure to a Benchmark Indicator with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment’s underlyings.

#### **Risk of investing in mid-cap companies**

Le Compartment is exposed to medium-capitalisation companies and more specifically to the equity securities of medium and intermediate sized enterprises (ETI), which may increase market and liquidity risks. The prices of these securities therefore increase and decrease more sharply and rapidly than those of large-cap stocks. The Compartment’s net asset value could behave similarly and therefore fall more sharply and strongly than that of a similar investment in large-cap stocks.

#### **Subscribers concerned and typical investor profile**

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the performance of large and mid-cap companies of developed countries, excluding the Euro zone countries.

The amount that it is reasonable to invest in this Compartment depends on each investor’s personal situation. To determine this amount, the investor must take into account his/her personal wealth and/or estate, cash requirements at the present and for five years, but also his/her desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one’s investments so as to avoid an exposure only to this Compartment’s risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment duration is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

***For more details, the complete prospectus can be obtained by requesting it from the management company.***

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Multi Units France Sicav: 4 March 2002.*
- *Approval date by the AMF (Financial Markets Authority): 12 December 2006.*
- *Compartment approval date by the AMF (Financial Markets Authority): 29 March 2019.*
- *Funds creation date: 5 January 2007.*
- *Compartment creation date: 9 May 2019.*

# Activity report

The fund replicates the performance of the MSCI Greece IMI + Coca-Cola 20-35 Net Return EUR Index (Ticker:NE714828).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI Greece UCITS ETF – Dist	FR0010405431	EUR	-37.76% <sup>(1)</sup>	-36.95%		-94.05%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative expenses;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index”.

The Tracking Error is 0.1016% for the sub-fund. The Tracking Error target for the year was 0.3%.

The level of tracking error achieved is below the anticipated tracking error due to market conditions and the replication techniques implemented by the management teams.

The sub-fund complies permanently with the French PEA requirements. Further details are available upon request with the management company.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy.
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products.
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy.
- MSCI and Sustainalytics ESG research to integrate ESG issues.
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 38 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO2e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR MSCI GREECE UCITS ETF  
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2020

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.  
All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 0%  
Yellow Flag 0%  
Green Flag 61%

(compartment of the Multi Units France Sicav)

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
<b>356</b>	<b>726</b>	<b>503</b>	Scope 1 reported (vs estimated)	57%
			Scope2 reported (vs estimated)	70%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	3%
Thermal Coal	3%
Natural Gaz	0%
Oil	0%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	0
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	0.0
Thermal Coal	0.0
Oil	0.0
Gas	0.0
Total	0.0

### Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

CO2e/\$M Invested	
Thermal Coal	0.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	0.0
Other	0.0

### Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.3%	0.0%	0.0%
Some efforts	66.3%	81.8%	53.5%
Limited efforts/information	8.7%	4.3%	0.5%
No effort/No evidence	20.2%	13.9%	46.1%

### Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The raw data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	12.4%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	6.3%
Liquid Fuel	8.6%
Natural Gas	56.6%
Nuclear	8.9%
Renewables	19.5%
Thermal Coal	

### Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	5%
20-49.9%	9%
50-100%	3%

Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	15.7%
Energy Efficiency	5.4%
Green Building	4.6%
Pollution Prevention	2.1%
Sustainable Water	1.8%

### Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	3.9%
Energy Efficiency	0.1%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.5%

## Physical Risk Corporate

Percentage of operations with high/moderate/low risks

Sector	Geographic Segment			Business Segment		
	Low	Moderate	High	Low	Moderate	High

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR MSCI GREECE UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1. Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments negotiated on a regulated market are assessed at the closing price on the day before the day of calculation of the net asset value. When these financial instruments are negotiated on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily negotiated.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments negotiated on organised markets are assessed at the clearing price on the day before the day of calculation of the net asset value. Conditional future financial instruments negotiated on organised markets are assessed at the market value on the day before the day of calculation of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of UCITS in transferable securities operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments negotiated on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

appendix

The exchange rates used for the assessment of financial instruments drafted in a currency other than the Compartment's reference currency are the exchange rates disseminated by WM Reuters the day of closing of the Compartment's net asset value.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and the management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are therefore invoiced to the Compartment;
- Transaction commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax <sup>(1)</sup>	Net assets	maximum 0.45% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Outperformance commissions	Net assets	None
Transactions commissions	Collection on each transaction	None

(1) including all fees excluding transaction fees, outperformance commissions and fees related to investments in UCITS.

**Accounting currency**

The Compartment's accounting is carried out in EUR.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** *(Not certified by the auditor)*

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

The Management Company reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

# appendix

The Compartment is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the establishment of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks of MSCI or of its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor International Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment and calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to bearers of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving mutual fund units or equities Compartment in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices is required to take into consideration the needs of Lyxor International Asset Management or of the bearers of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the establishment of the MSCI indices assumes any liability or obligation with regard to the administration, management or marketing of the Compartment.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE ACCURACY AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE REGARDING THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTS, BEARERS OF THE FUND EQUITIES OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY MSCI OR ANY OTHER PARTY BE HELD LIABLE WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

<b>Unit capitalisation <sup>(2)</sup></b>	<b>-0.30</b>	0.00	-0.11	0.24	-0.24

<sup>(1)</sup>In pursuant to the Fiscal Instruction of 4 March 1993 from the General Tax Department, the unit tax credit will be determined on the day of the dividend's detachment by distribution of the total amount of the fiscal tax credits between the outstanding equities on that date.

<sup>(2)</sup>The unit capitalisation corresponds to the operating result and the capital gains or losses on the number of units in circulation. This calculation method is applied from 1 January 2013.

Compartment creation date: 9 May 2019.

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR MSCI INDIA UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartments / feeder</b>	LYXOR MSCI INDIA UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

International equities.

The Compartment has at least 60% permanent exposure to a foreign equity market or to equity markets of several countries, including possibly the French market.

The Compartment is index-based fund of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

Classes of Acc (EUR) and Acc (USD) equities: Capitalisation of all the amounts available for distribution.

### Management objective

The Compartment is a passively managed index-based UCITS.

The management objective of the Compartment is to replicate, both upwards and downwards, the performance of the MSCI India Net Total Return Index (the "Benchmark Index"), listed in US Dollars (USD), regardless of its evolution, while minimising as far as possible the tracking error between the performance of the Sub-Fund and that of the Benchmark Index.

The anticipated level of the ex-post tracking error under normal market conditions is 0.1%.

### Benchmark indicator

The Benchmark Indicator is a net dividends reinvested index, which means that the Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The Benchmark Indicator is an equity index, weighted by free float-adjusted market capitalization, calculated and published by the international index provider MSCI Inc.

The Benchmark Indicator is made up exclusively of Indian equities (India) in the large and mid-cap segments and retains the fundamental characteristics of the MSCI indices, i.e.: Adjustment of the stock market capitalization of the securities in the Benchmark Indicator on the basis of the float, and sector classification according to the GICS (Global Industry Classification Standard) classification.

The objective of the Benchmark Indicator is to represent 85% of the capitalization adjusted on the basis of the float, of each group of industries of the Indian market.

By targeting 85% of the representativeness of each industry group, the Benchmark Indicator measures 85% of the market capitalization of the Indian market, while also reflecting the market's economic diversity.

The MSCI methodology and its calculation method entail the Benchmark Indicator being made up of a variable number of companies.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as the information on the composition and on the respective importance of components of the Benchmark Indicator will be available on the website: [www.msci.com](http://www.msci.com).

The monitored performance is that of the closing prices of the Benchmark Indicator.

### **Benchmark indicator revision and composition**

The Benchmark Indicator is reviewed quarterly.

The exact composition and the rules for revising the composition of the Benchmark Indicator are published by MSCI and are available on the website: [www.msci.com](http://www.msci.com).

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

### **Benchmark indicator publication**

The value of the Benchmark Indicator and the list of its constituents are available on the MSCI website: [www.msci.com](http://www.msci.com).

The Benchmark Indicator is calculated daily at closing prices using the official closing prices of the stock exchanges on which the constituent securities are listed.

The Benchmark Indicator is calculated in real time each trading day.

The Benchmark Indicator is available via Reuters and Bloomberg.

The Benchmark Indicator's closing price is available on the website: <https://www.msci.com>.

The administrator of the Benchmark Index is MSCI Limited.

The administrator of the Benchmark Indicator is listed on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

## **Investment strategy**

### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will reach its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to reach its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The financial securities in the Compartment's assets will notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small capitalisation markets.

The securities basket held may be adjusted on a daily basis so that its value be higher or equal to 100% of the net assets in most cases. Where necessary, the aim of this adjustment will be the neutralisation of the counterparty risk resulting from the future exchange contract described above.

Information relative to the (i) updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the forward exchange operation entered into by the Compartment, are available on the page dedicated to the Compartment on the site [www.lyxoretf.com](http://www.lyxoretf.com).

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment can use up to 20% of its assets to acquire equities from a single issuing entity. This 20% limit will be verified, on each Benchmark Indicator rebalancing date, in application of the Benchmark Indicator calculation method which limits the exposure of each equity of the same issuing entity to 20% and which is calculated by the sponsor or the Benchmark Indicator calculation agent. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument and of securities from an economic sector represented by the Benchmark Indicator. This could be the case in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In this case, the manager intends to primarily use the following assets:

### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

**The aforementioned equities will be chosen on the basis of criteria:**

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);
- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);
- Geographical area;
- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretff.com](http://www.lyxoretff.com).

The investment on undertakings for collective investment in transferable securities ("UCITS") compliant with the Directive 2009/65/EC is limited to 10% of the assets.

The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of a future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

**3. Off-balance sheet assets (derivative instruments)**

The Compartment will use derivatives, including over-the-counter index-linked swaps, exchanging the value of the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (as described in part 1 of this section).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.
- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including future financial instruments other than index-linked swaps.

When Société Générale acts as a counterparty to FFI, conflicts of interest may arise between the Management Company and Société Générale, these situations are governed by the Management Company's conflict of interest management policy.

In the event of default by a counterparty to a total return swap agreement or early termination of the agreement, the Compartment may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted. Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty to the aforementioned forward financial instruments will have no discretionary power over the composition of the Compartment's investment portfolio or over the underlying assets of the forward financial instruments within the limits and under the conditions laid down by the regulations.

**4. Securities with integrated derivatives**

None.

**5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment may have recourse to deposits with lending institutions belonging to the same group as the depositary in order to optimise its cash management.

**6. Cash borrowing**

The Compartment may have recourse, on a temporary basis, to cash borrowings of up to 10% of its net assets, in particular in order to optimise cash management.

## **7. Temporary securities acquisition and sale operations**

None. The manager will not enter into transactions involving the temporary purchase and/or sale of securities.

## **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depository. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, very liquid and traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

**In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:**

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by institutions and supranational bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

### **Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

### **Reinvestment of received guarantees.**

The financial guarantees received on another form than cash will not be sold, reinvested or pledged.

The guarantees received in cash will be, at the manager discretion:

- (i) Placed as a deposit to an approved institution;
- (ii) Invested in government bonds of highest grade;
- (iii) Used for reverse repurchase transactions provided that these transactions are concluded with credit institutions which are the subject of prudential supervision and that the UCITS may recall at any time the global amount of liquidities taking into account the accrued interests;
- (iv) Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts and/or transactions for the temporary purchase and sale of securities), the Compartment may be forced to resell the collateral received in connection with such transaction in adverse market conditions and thus incur a loss. In the event that the Compartment is permitted to reinvest the collateral received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired in connection with such reuse of the collateral.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The Compartment will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to the vagaries of the markets

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Risk related to the exposure to Emerging markets**

The Compartment's exposure to emerging markets results in a greater risk of loss than would exist in the event of investments carried out within traditional developed markets. In particular, the operating and supervision rules in an emerging market may differ from the standards applicable to developed markets. The exposure to emerging markets notably results in: increased volatility of the markets, lower transaction volumes, the risk of economic and/or political instability, an unstable or uncertain fiscal and/or regulatory regime, risks of closing of the markets, of government restrictions on foreign investments, and interruption or restriction of the convertibility or transferability of any of the currencies comprising the reference index.

#### **Counterparty risk**

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets by counterparty.

### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

### **Liquidity risk (primary market)**

Should the Compartment (or one of its counterparties for FFI) adjust its exposure and the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

### **Risk related to the low diversification of the Benchmark Indicator**

The Benchmark Index to which investors are exposed covers a given region, sector or strategy and therefore does not necessarily provide the same broad asset diversification as an index that would be exposed to several regions, sectors or strategies. Exposure to this poorly diversified Benchmark Indicator may result in greater volatility than that of more diversified markets. Nevertheless, the diversification rules derived from the UCITS standards apply at all times to the underlying assets of the Compartment.

### **Liquidity risk on a place of listing**

The ETF's share price can deviate from its indicative net asset value. The liquidity of the Compartment's equities on a place of listing can be affected by any suspension that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or
- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

### **Risks related to collateral management**

#### **Operational risk**

The Compartment may be subject to operational risk due to defaults or errors by the various parties involved in the collateral management of securities financing transactions and/or total return swaps (TRS). This risk arises only in connection with the management of collateral for corporate finance transactions and total return swaps as referred to in Regulation (EU) 2015/2365.

#### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of the investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of the equities may be affected.

### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of the equities.

### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by the supplier of the index,
- iii) The supplier of the index is incapable of providing the level or value of the Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings used with this Benchmark Indicator or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.
- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

### **Securities transaction risk**

A security transaction ("ST") impacting a component of the Benchmark Indicator may be subject to an unforeseen change that contradicts the prior official announcement. As the valuation of such ST by the Compartment is based on the initial announcement, the net asset value of the Compartment may be adversely affected in the event of an unforeseen change. In addition, the Fund's performance may diverge from that of the Benchmark Indicator if the Compartment's treatment of the ST differs from the treatment of the ST provided for by the Benchmark Indicator's methodology.

### **Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to the exchange risk insofar as the underlying securities comprising the Benchmark Indicator may be listed in a currency other than the currency of the Benchmark Indicator or be derived from securities listed in a currency other than the currency of the Benchmark Indicator. The fluctuations of exchange rates could therefore negatively affect the reference Benchmark Indicator followed by the Compartment.

### **Exchange risk linked to the class of Acc-(EUR) equities**

The abovementioned class of equities is exposed to an exchange risk to the extent that it is listed in a currency other than that of the Benchmark Indicator. The net asset value of the abovementioned class of equities can therefore decrease due to fluctuating exchange rates even though the value of the Benchmark Indicator has increased.

### **Subscribers concerned and typical investor profile**

The Compartment is "open to any subscriber".

An investor subscribing to this Compartment wishes to obtain an exposure to the Indian equities market.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers. The minimum recommended investment term is greater than 5 years.

“U.S. Persons” (as defined below - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment’s complete prospectus and the latest annual and periodic documents are sent within one week of the bearer’s written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of the Sicav Multi Units France: 4 March 2002.*
- *Date of approval by the AMF: 1 September 2006.*
- *Date of AMF approval of the Compartment: 29 March 2019.*
- *Date of creation of the Fund: 25 October 2006.*
- *Date of creation of the Compartment: 9 May 2019.*

# Activity report

The fund replicates the performance of the MSCI India Net Total Return Index (Ticker:NDEUSIA).

## Performance trend at the closing date:

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor MSCI India UCITS ETF - Acc (EUR)	FR0010361683	EUR	-8.18% <sup>(1)</sup>	-6.66% <sup>(2)</sup>		75.73%
Lyxor MSCI India UCITS ETF - Acc (USD)	FR0010375766	USD	-4.13% <sup>(1)</sup>	-2.54%		52.33%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index.”

<sup>(2)</sup> “Where the Benchmark Indicator is denominated in a currency other than the currency of the Unit, the performance of the Benchmark Indicator is first converted into the currency of the Unit for the sake of clarity and comparison. For this purpose, a foreign exchange transaction (at the WM Reuters 5:00 p.m. rate on the relevant day) is applied daily to the value of the Benchmark Indicator.”

The Tracking Error is 0.0479% for the sub-fund. The Tracking Error target for the year was 0.1%.

The realized tracking error level is below the anticipated tracking error level due to market conditions and replication techniques implemented by the portfolio managers. This difference is considered as immaterial.

Index Linked Swap's counterparty is: Société Générale.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website [Lyxor.com](http://Lyxor.com) and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

The fund applies on fund holdings an exclusion of the firms that are to be excluded in application of the Defense Sector Policy, due to their involvement in activities linked to prohibited or controversial weapons (anti-personnel mines, cluster bombs or their key components, depleted uranium munitions, as well as biological, chemical, nuclear or radiological weapons).

The fund applies on fund holdings an exclusion of firms, in application of the LYXOR Climate Policy related to the thermal coal.

LYXOR excludes companies whose turnover from activities related to the extraction of thermal coal is greater than 10% or companies that belong to the energy sector and from which more than 30% of the electricity production (mixed energy) comes from coal.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Specific controls are performed (pre & post trade) within the Risk department, in total independence of operational teams. All breaches are notified to Funds Managers for immediate resolution. The post trade control is on NAV frequency basis.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website [Lyxor.com](http://Lyxor.com).

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

The exclusion described above is applied to the fund holdings.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

- Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

- The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),
- Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),
- A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

- Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

- Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

- In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

- the Germanwatch climate performance index score
- the environment performance score
- the Environmental Vulnerability index

LYXOR MSCI INDIA UCITS ETF  
(compartment of the Multi Units France Sicav)

---

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

- Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations
- Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings. To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

**ESG Measurement methodology (Corporate & Government issuers)**

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

**Portfolio Exposure to ESG Controversies**

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 1%  
Orange Flag 13%  
Yellow Flag 38%  
Green Flag 48%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales	Portfolio rated by weight	100%
224	523	441	Scope 1 reported (vs estimated)	85%
			Scope2 reported (vs estimated)	71%
			Scope 1 & 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)\*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	28%
Thermal Coal	3%
Natural Gaz	25%
Oil	25%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	4 647
Gas (MMBOE)	0.0009
Oil (MMBOE)	0.0008

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M invested	
Metallurgical Coal	3 258.9
Thermal Coal	8 488.0
Oil	267.3
Gas	234.0
Total	12 320.3

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

TCO2e/\$M Invested	
Thermal Coal	8 488.0
Oil Sands	0.0
Shale Oil or Shale Gas	106.5
Sum High Impact Reserves	8 594.5
Other	3 725.8

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	0.0%	0.0%	3.6%
Some efforts	92.1%	96.6%	37.5%
Limited efforts/information	1.6%	0.8%	1.3%
No effort/No evidence	5.1%	2.7%	57.5%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio	
	3.4%
Power generation by fuel as maximum percentage of total (rebased at 100%)	
Hydro	1.4%
Liquid Fuel	Natural Gas
	1.7% Nuclear
Renewables	1.3%
Thermal Coal	95.6%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:	
0-19.9%	22%
20-49.9%	0%
50-100%	0%
Weight of Companies Offering Clean Technology Solutions	
Alternative Energy	8.8%
Energy Efficiency	17.1%
Green Building	0.2%
Pollution Prevention	2.5%
Sustainable Water	1.7%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution	
Alternative Energy	0.1%
Energy Efficiency	1.0%
Green Building	0.0%
Pollution Prevention	0.2%
Sustainable Water	0.1%

## Physical Risk Corporate

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

The Lyxor International Asset Management remuneration policy has no impact on the risk profile of the FIA or UCITS, and serves to cover all of the conflicts of interest related to the financial management of the vehicles.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

LYXOR MSCI INDIA UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Lyxor International Asset Management</b>	<b>Number of Employees</b>	<b>Full-Time Equivalent</b>	<b>Aggregated Compensation (Fixed and Variable) (EUR)</b>
<b>Identified personnel*</b>	27	22.32	4,272,167
<b>Of which managers</b>	20	16.94	2,183,217
<b>Of which other identified persons</b>	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended collective investment undertakings.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a linear distribution, over the residual lifespan, of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the current value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this assessment.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable market value, under the management company's responsibility.
- Temporary acquisitions and sales of securities are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable market value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters on the same day of the Compartment's net asset value date.

**Posting method for the trading fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the collected coupon.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Assessment methods for off-balance sheet commitments**

Off-balance sheet operations are assessed at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock market tax, etc.) and the transaction commission which, if relevant, may notably be collected by the custodian and financial manager by delegation.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the financial manager by delegation when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule, rate</b>
Financial management and administrative fees external to the portfolio management company (CAC, Custodian, distribution, lawyers) including tax <sup>(1)</sup>	Net assets	maximum 0.85% per year
Maximum indirect costs (commissions and management fees)	Net assets	None

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

For classes of Acc (EUR) and Acc (USD) equities: Capitalisation of all the amounts available for distribution.

appendix

The Compartment is in no way sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), or by any MSCI subsidiary, or by any of the entities involved in the preparation of the MSCI indices. The MSCI indices are the exclusive property of MSCI and the MSCI indices are trademarks belonging to MSCI or its subsidiaries and have been the subject of a licence granted, for certain requirements, to Lyxor International Asset Management. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation or calculation of the MSCI indices makes any declaration or issues any express or implicit guarantee relative to holders of the Compartment's equities or more generally to the public, with regard to the timeliness of a transaction involving UCITS equities in general or the Compartment's equities in particular, or regarding the ability of any MSCI index to replicate the performance of the overall equity market. MSCI or its subsidiaries are the owners of certain names, registered trademarks and of the MSCI indices that are determined, composed and calculated by MSCI without discussion with Lyxor International Asset Management or the Compartment. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices is required to take into account the needs of Lyxor International Asset Management or of the holders of the Compartment's equities when determining, composing or calculating the MSCI indices. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices makes any decision regarding the launch date, the price, the quantity of the Compartment's equities, or even the determination and calculation of the formula used to establish the Compartment's net asset value. Neither MSCI, nor any MSCI subsidiary, nor any of the entities involved in the preparation of the MSCI indices assumes any liability or obligation with regard to the Compartment's administration, management or marketing.

THOUGH MSCI OBTAINS INFORMATION FOR INTEGRATION OR USE IN THE CALCULATION OF THE INDICES FROM SOURCES THAT MSCI CONSIDERS TO BE RELIABLE, NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OR CALCULATION OF THE MSCI INDICES GUARANTEES THE EXACTNESS AND/OR EXHAUSTIVE NATURE OF THE INDICES OR OF ANY INCLUDED DATA. NEITHER MSCI NOR ANY OTHER PARTY INVOLVED IN THE CREATION OF A CALCULATION FOR THE MSCI INDICES GIVES ANY EXPRESS OR IMPLICIT GUARANTEE AS TO THE RESULTS THAT MAY BE OBTAINED BY THE HOLDER OF A MSCI LICENCE, THE CUSTOMERS OF THE SAID LICENSEE AS WELL AS THE COUNTERPARTIES, HOLDERS OF FUND EQUITY OR ANY OTHER PERSON OR ENTITY, BASED ON THE USAGE OF THE INDICES OR OF ANY DATA INCLUDED WITH REGARD TO THE RIGHTS GRANTED BY LICENCE OR FOR ANY OTHER USAGE. NEITHER MSCI NOR ANY OTHER PARTY GIVES EXPRESS OR IMPLICIT GUARANTEES AND MSCI REJECTS ALL GUARANTEES REGARDING THE COMMERCIAL VALUE OR ADEQUACY FOR A SPECIFIC USAGE OF THE INDICES OR INCLUDED DATA. NOTWITHSTANDING THE ABOVE, UNDER NO CIRCUMSTANCES MAY THE LIABILITY OF MSCI OR OF ANY OTHER PARTY BE SOUGHT WITH REGARD TO ANY DAMAGES, WHETHER DIRECT, INDIRECT OR OTHER (INCLUDING THE LOSS OF EARNINGS), EVEN IN CASE OF KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES.

Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

### 3.5 Receivables and Debts: breakdown by type

*Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>12,262,056.11</b>
Future currency exchange operations:	
Future purchases of currency	-
Total traded amount of future Sales of currencies	-
Other receivables:	
Deferred settlement sales	12,262,056.11
-	-
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>12,788,275.50</b>
Future currency exchange operations:	
Future sales of currencies	-
Total traded amount of future Purchases of currencies	-
Other debts:	
Account payable	12,262,056.11
Accrued expenses	526,219.39
-	-
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

Number of equities issued/redeemed during the fiscal year:	Number of equities	Subscriptions	Number of equities	Redemptions
		Amount		Amount
Equity Acc-(EUR) / FR0010361683	11,961,835	194,127,357.94	23,730,563	359,031,620.66
Equity Acc-(USD) / FR0010375766	3,893,840	58,979,415.45	3,434,827	54,602,671.57
Subscription / redemption commission by equity category:		Amount		Amount
Equity Acc-(EUR) / FR0010361683		-		-
Equity Acc-(USD) / FR0010375766		-		-
Remittances by equity category:		Amount		Amount
Equity Acc-(EUR) / FR0010361683		-		-
Equity Acc-(USD) / FR0010375766		-		-
Commissions acquired by the Compartment by equity category:		Amount		Amount
Equity Acc-(EUR) / FR0010361683		-		-
Equity Acc-(USD) / FR0010375766		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>%</b>
Equity category:	
Equity Acc-(EUR) / FR0010361683	<b>0.85</b>
Equity Acc-(USD) / FR0010375766	<b>0.85</b>
Performance commissions (variable fees): amount of costs for the year	<b>Amount</b>
Equity category:	
Equity Acc-(EUR) / FR0010361683	-
Equity Acc-(USD) / FR0010375766	-
EQUITY Dist / FR0010296061	-
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-
- CIU 3	-
- CIU 4	-

### 3.8 Commitments given and received

- 3.8.1 Description of guarantees received by the Compartment with indication of the capital guarantees ..... **None**  
 3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1	Current value of the financial instruments that are the subject of temporary acquisition:	
	- Financial instruments sold under forward repurchase agreements	-
	- Other temporary operations	-
3.9.2	Current value of the financial instruments comprising security deposits:	
	Financial instruments received as guarantees and not included in the balance sheet:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
	Financial estimates given as guarantees and maintained in their original item:	
	- equities	-
	- bonds	-
	- debt securities	-
	- other financial instruments	-
3.9.3	Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
	- CIU securities	-
	- Swaps	<b>8,911,826.26</b>

**APPENDIX TO THE REPORT  
intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Fund's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Fund, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale Paris, Zurich Branch, Talacker 50, P.O. Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the collective investment: 31-Oct

UCITS management commission: 0.85 % tax included

Average assets of the fund for the period from 01/11/19 to 30/10/2020: 821,747,176.45

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

LYXOR NEW ENERGY (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	LYXOR NEW ENERGY (DR) UCITS ETF is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### Classification

International equities.

At least 60% of the Lyxor New Energy UCITS ETF Compartment (the “Compartment”) is permanently exposed in a foreign equity market or in equity markets of several countries, possibly including the French market.

The Compartment is an index-based fund of the UCITS ETF type.

### Terms of determination and allocation of amounts available for distribution

The Management Company reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

### Management objective

The Compartment is a passively managed index-based UCITS.

The Compartment’s management objective is to replicate, downwards and upwards, the evolution of the World Alternative Energy Index CW Net Total Return index (the “Benchmark Indicator”), listed in euros (EUR), while insofar as possible minimizing the tracking error between the Compartment’s performances and those of the Benchmark Indicator.

The Benchmark Indicator is representative of the performance of the global renewable energy sector.

The maximum anticipated level of the ex-post tracking error under normal market conditions is 0.30%.

### Benchmark Indicator

The Benchmark Indicator's performance includes the net dividends paid by its underlying equities.

The Benchmark Indicator is an equity index calculated by Solactive AG, maintained by Robeco SAM (Sustainable Asset Management) and published by Solactive AG.

The Benchmark Indicator is a reference index dedicated to the renewable energy sector.

The Benchmark Indicator is made up of securities listed on the markets in Europe, America and Asia, with a significant portion of its revenues coming from one of the following three sectors of activity:

- Renewable energy (sun, wind, biomass);
- Energy efficiency (better use of energy sources, notably through electric meters and superconductors);
- Decentralisation of power supplies (electricity generation near the consumer, notably via micro-turbines and fuel cells).

The weighting of the Benchmark Indicator is calculated on the basis of the floating capitalizations of each of the adjusted components, taking into account criteria of optimal liquidity and maximum exposure as indicated in the methodology of the Benchmark Indicator.

The monitored performance is that of the Benchmark Indicator closing prices.

An exhaustive description and the complete methodology for the construction of the Benchmark Indicator as well as information on the composition and relative weights of the Benchmark Indicator's components are available on the website: <https://www.solactive.com>

#### **Benchmark indicator revision and composition**

The Benchmark Indicator is analysed and rebalanced on a semi-annual basis ( January and July of each year).

The exact composition of the Benchmark Indicator and the rules of revision of its composition are available on the website: <https://www.solactive.com>.

The above-mentioned frequency of rebalancing has no effect on costs as part of the implementation of the investment strategy.

#### **Benchmark indicator publication**

The Benchmark Indicator is calculated daily using the official closing prices of the exchanges where the constituent stocks are listed.

The Benchmark Indicator's closing price is available on the website: <http://www.solactive.com>.

The Benchmark Indicator administrator is registered on the register of administrators and benchmarks maintained by ESMA.

In accordance with Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016, the Management Company has a procedure monitoring of the reference indices used describing the measures to be implemented in the event of substantial changes made to an index or to discontinue the provision of that index.

### **Investment strategy**

#### **1. Strategy employed**

The Compartment will comply with the investment rules dictated by the European Directive no. 2009/65/EC dated 13 July 2009.

In pursuit of the greatest possible correlation with the performance of the Benchmark Indicator, the Compartment will achieve its management objective using the indirect replication method which means that it will enter into one or more OTC swap contracts enabling it to achieve its investment objective. The objective of these swap contracts will be to exchange (i) the value of the Compartment's assets, which will consist of balance sheet assets (excluding any securities received as guarantees), for (ii) the value of the securities that underlie the Benchmark Indicator.

The securities held as assets by the Compartment may notably be securities that make up the Benchmark Indicator, as well as other international equities, from all economic sectors, listed on all markets, including the small caps markets.

The basket of assets held may be adjusted daily such that its value will generally be at least 100% of the net assets. When necessary, this adjustment will be made to ensure that the counterparty risk arising from the aforementioned swap contract will be entirely neutralized.

Information relative to (i) the updated composition of the basket of the balance sheet assets held in the Compartment's portfolio and (ii) the market value of the future exchange operation entered into by the Compartment are available on the page dedicated to the Compartment on the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The update frequency and/or the update date of the aforesaid information is also indicated on the same page of the aforesaid website.

As part of the management of its exposure, the Compartment may be exposed up to 20% of its assets in equities from a single issuing entity. This 20% limit will be checked on each rebalancing date of the Benchmark Indicator, in application of the Benchmark Indicator's calculation method that limits the exposure to each equity of a single issuing entity to 20%, and for which the calculation is carried out by the sponsor or the calculation agent of the Benchmark Indicator. This 20% limit can be increased to 35% for a single issuing entity when this proves to be justified by exceptional conditions within the market, notably when certain securities are heavily dominant and/or in the event of high volatility of a financial instrument or of securities from an economic sector represented by the Benchmark Indicator, in particular in the event of a public offering affecting one of the securities making up the Benchmark Indicator or in the event of a significant restriction of liquidity affecting one or more financial instruments making up the Benchmark Indicator.

In the present case, the manager intends to primarily use the following assets:

#### **2. Balance sheet assets (excluding integrated derivatives)**

The Compartment may hold, in compliance with the ratios contained in the regulation, international equities (from all economic sectors, listed on all markets), including within the small cap markets.

**The aforementioned equities will be chosen on the basis of criteria:**

Of eligibility, in particular:

- Subordination to the main market indices or to the Benchmark Indicator;
- Liquidity (minimal thresholds applied to mean daily volumes of transactions and to the equity market capitalisation);

- Rating of the country of the issuer's head office (requirement of a minimal threshold in S&P rating or equivalent).

Of diversification, notably:

- Issuer (application of ratios applicable to the eligible assets of a UCITS, as specified in Art. R214-21 of the [French] Monetary and Financial Code);

- Geographical area;

- Sector.

For more information on the abovementioned eligibility and diversification criteria, investors can visit the website: [www.lyxoretf.com](http://www.lyxoretf.com).

The investment in undertakings for collective investment in transferable securities ("UCITS") that comply with Directive 2009/65/EC is limited to 10% of the net assets. The manager will not invest in units or equities of AIF or other investment funds established on the basis of foreign laws.

When the Compartment receives securities as guarantee under the conditions and limits of this section's paragraph 8 below, they will also constitute balance sheet assets received in full ownership by the Compartment, given that they are received by the Compartment in full ownership.

As part of the future optimisation of the Compartment's management, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve the management objective.

### **3. Off-balance sheet assets (derivative instruments)**

The Compartment will have recourse to index-linked swaps traded over-the-counter, exchanging the value of the equities in the Compartment's assets (or of any other financial instrument or asset held by the Compartment, where appropriate) against the value of the Benchmark Indicator (in compliance with the description contained in this section's paragraph 1 above).

- Maximum proportion of assets under management which may be the object of a Total Return Swap (TRS): 100% of the assets under management.

- Expected proportion of assets under management which may be the object of a Total Return Swap (TRS): up to 100% of the assets under management.

As part of a future optimisation of the Compartment management, the manager reserves the right to use other instruments within the limits of the regulations, such as to achieve the management objective, for example including forward financial instruments other than index-linked swaps.

In the event of default by a counterparty to a total return swap agreement (TRS) or early termination of the agreement, the Fund may be exposed to the performance of its balance sheet assets until a new total return swap agreement is concluded with another counterparty, if applicable. In this context, the Compartment may suffer losses and/or incur costs/costs and its ability to achieve its management objective may also be negatively impacted.

Where the Compartment enters into several total return swaps with one or more counterparties, the risks mentioned above apply to the portion of the assets committed under the terminated contract and/or for which the counterparty is in default.

The counterparty of the aforesaid future financial instruments will have no discretionary power regarding the composition of the Compartment's investment portfolio, nor regarding the underlying assets of the future financial instruments.

### **4. Securities with integrated derivatives**

None.

### **5. Deposits**

Up to a maximum of 20% of its net assets, the Compartment can have recourse to deposits with credit institutions belonging to the same group as the depositary in order to optimise its cash management.

### **6. Cash borrowings**

Up to a maximum of 10% of its net assets, the Compartment may temporarily have recourse to borrowings.

### **7. Temporary securities acquisition and sale operations**

None. The manager will not have recourse to temporary securities acquisition and/or sale operations.

### **8. Financial guarantees**

In all cases in which the Compartment is subject to a counterparty risk as a result of the deployed investment strategy, notably in the event of the Compartment's use of forward swap contracts traded over the counter, the Compartment can receive securities that are considered as guarantees in order to reduce the counterparty risk related to these operations. The portfolio of received guarantees can be adjusted each day in order for its value to be greater than or equal to the level of the counterparty risk borne by the Compartment in most cases. The objective of this adjustment will be to ensure that the level of counterparty risk borne by the Compartment is totally neutralized.

Any financial guarantee received by the Compartment will be provided to the Compartment in full ownership and listed in the Compartment's account opened in the books of its depositary. As such, the received financial guarantees will be listed amongst the Compartment's assets.

Any financial guarantee received by the Compartment within this framework must comply with the criteria defined by the prevailing laws and regulations, notably in terms of liquidity, valuation, credit quality of the issuers, correlation, risks related to the management of securities, and applicability. The received guarantees must, in particular, comply with the following conditions:

- (a) Any received guarantee must be of high quality, offer a level of liquidity in accordance with the minima defined by the risk management department of the Management Company and be traded on a regulated market or in a multilateral trading system with transparent pricing, in order to be sold quickly at a price close to the prior valuation;
- (b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;
- (c) They must be issued by an entity that is independent of the counterparty and must not be highly correlated with the counterparty's performances;
- (d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the Compartment's net asset value;
- (e) The Compartment's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.

Notwithstanding the condition specified in (d) above, the Compartment may receive a basket of financial guarantees with an exposure to a single issuer corresponding to more than 20% of its net asset value provided that:

- such received financial guarantees are issued by (i) a Member State, (ii) one or more of a Member State's local authorities, (iii) a country that is not a Member State or (iv) a public international organization to which one or more Member States belong; and
- such financial guarantees consists of at least six different issues of which none exceeds 30% of the Compartment's assets.

In compliance with the aforesaid conditions, the guarantees received by the Compartment can include:

- (i) Liquid assets or equivalents, notably including short-term bank assets and money market instruments;
- (ii) Bonds issued or guaranteed by an OECD Member State, by its local public authorities or by supranational institutions and bodies of a Community, regional or worldwide nature, or by any other country, provided that conditions (a) to (e) (above) have been fully met;
- (iii) Equities or units issued by money market funds that calculate a daily net asset value and that have a rating of AAA or equivalent;
- (iv) Equities or units issued by UCITS investing primarily in bonds/equities as indicated in points (v) and (vi) below;
- (v) Bonds issued or guaranteed by first-class issuers, offering suitable liquidity;
- (vi) Equities admitted to trading or traded on a regulated market of an EU Member State, on a stock market of an OECD Member State or on a stock market of another country provided that conditions (a) to (e) (above) have been fully met and that these equities are included within a first-class index.

**Policy related to discounts:**

The Compartment's management company will apply a margin to the financial guarantees received by the Compartment. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

**Reinvestment of received guarantees:**

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. Guarantees received in cash shall, at the discretion of the manager, be either:

- (i) deposited with an enabled institution;
- (ii) invested in high-quality State bonds;
- (iii) used for reverse repurchase transactions, on the condition that such transactions are performed with credit institutions which are subject to prudential regulation and on the condition that the UCITS may at any time withdraw the total amount of the liquidity, taking into account accrued interest;
- (iv) invested in short-term money mutual funds, as they are defined in the guidelines for a common definition of European money mutual funds.

Reinvested cash financial guarantees must be diversified, in compliance with the applicable requirements for non-cash financial guarantees.

In the event of default by the counterparty to a securities financing transaction (forward exchange contracts negotiated over the counter at over-the-counter and/or temporary acquisitions and sales of securities), the Compartment may be forced to resell the guarantees received under this transaction under unfavourable market conditions and thus incur a loss. In the event that the Compartment is authorised to reinvest the guarantees received in cash, the loss incurred may be caused by the depreciation of the financial securities acquired as part of this reuse of guarantees.

### **Counterparty selection policy**

The Management Company implements a policy of selecting intermediaries and financial counterparties, in particular when entering into financial contracts (FFIs and temporary acquisitions and disposals of securities) on behalf of the Compartment. The selection of counterparties to financial contracts and financial intermediaries is carried out rigorously from among the reputable counterparties and intermediaries in the market on the basis of several criteria.

The permanent risk management function analyses the credit quality of these counterparties and also takes into consideration various criteria to define the initial universe of authorised counterparties:

- Qualitative criteria based on the Standard and Poors LT rating;
- Quantitative criteria based on the LT CDS spread (absolute criteria, volatility and comparison with a reference group, etc.).

Any new counterparty must then be validated by the counterparty committee composed of the heads of the Management, the Middle Office, the CICO and the head of the permanent risk management function. If a counterparty no longer meets one of the criteria, the Counterparty Committee meets to decide on the measures to be taken.

In addition to the above, the Management Company applies its best execution policy. For more information on this policy and in particular on the relative importance of the different execution criteria by asset class, please consult our website: [www.lyxor.com](http://www.lyxor.com), under the heading Regulatory information.

### **Risk profile**

The shareholder's money will primarily be invested in financial instruments selected by the management company. These instruments will be subject to the vagaries of the markets.

Through the Compartment, the shareholder is primarily exposed to the following risks:

#### **Equity risk**

An equity price can vary upward or downward, and it notably reflects the changing risks related to the issuing company or the economic situation of the corresponding market. The equity markets are more volatile than the rate markets, in which it is possible, over a given period and with equal macroeconomic conditions, to estimate the incomes.

#### **Risk related to low diversification of the Benchmark Indicator**

The Benchmark Indicator to which the investors are exposed covers a given region, sector or strategy and therefore does not necessarily allow for as broad a diversification of the assets as would be the case of an index that is exposed to several regions, sectors or strategies. The exposure to such an index with such low diversification can result in greater volatility than in more diversified markets. Nevertheless, the diversification rules resulting from the UCITS standards always apply to the Compartment's underlyings.

#### **Capital loss risk**

The invested capital is not guaranteed. The investor consequently runs the risk of capital loss. The entire or part of the invested amount may not be recovered, notably should the performance of the Benchmark Indicator be negative over the investment period.

#### **Liquidity risk (primary market)**

If, when the Compartment (or one of its counterparties for future financial instrument ("FFI")) adjust its exposure, the markets related to this exposure are then limited, closed or subject to significant purchase / sale price discrepancies, the value and/or liquidity of the Compartment could be negatively affected. Should low volumes of exchanges result in an inability to carry out transactions linked to the replication of the Benchmark Indicator, this can also have consequences on the processes related to the subscription, conversion or redemption of equities.

#### **Liquidity risk on a place of listing**

The Compartment's equity price can deviate from its indicative net asset value. The liquidity of the Compartment's units or equities on a place of listing can be affected by any suspension, that could notably be due to:

- i) Suspension or stoppage of the calculation of the Benchmark Indicator, and/or
- ii) Suspension of the market(s) of the underlyings used by the Benchmark Indicator, and/or
- iii) The impossibility for a given place of listing to obtain or calculate the Compartment's indicative net asset value, and/or

- iv) A market maker's violation of the rules applicable to this marketplace, and/or
- v) A failure of this marketplace's IT or electronic systems.

#### **Counterparty risk**

The Compartment is exposed to the risk of bankruptcy, payment default or any other type of default of any counterparty with which it has entered into a contract or transaction. It is particularly exposed to the counterparty risk resulting from its use of FFI traded over-the-counter with Société Générale or with any other counterparty. In compliance with the UCITS regulations, the counterparty risk (whether this counterparty is the Société Générale or any other entity) cannot exceed 10% of the total value of the Compartment's assets per counterparty.

#### **Risks related to collateral management**

##### **Operational risk**

The Compartment may bear the risk of direct or indirect losses as a result of operational failures related to the conclusion of any Total Return Swap (TRS) and/or securities financing transactions, as referred to in Regulation (EU) 2015/2365.

##### **Legal risk**

The Compartment may bear a legal risk related to the conclusion of any Total Return Swap contract (TRS) as laid down in Regulation (EU) 2015/2365.

#### **Risk that the management objective may only be partially achieved**

Nothing guarantees that the management objective will be achieved. Indeed, no asset or financial instrument will allow an automatic and continuous replication of the Benchmark Indicator, notably should one or more of the following risks arise:

#### **Risk related to the use of derivative instruments**

In order to achieve its investment objective, the Compartment uses FFI traded over-the-counter, that can notably take the form of swap contracts that will allow it to obtain the performance of the Benchmark Indicator. These FFIs can result in a series of risks on the level of the FFIs that notably include: counterparty risk, event affecting the hedging, event affecting the Benchmark Indicator, risk related to the tax regime, risk related to the regulations, operational risk and liquidity risk. These risks can directly affect a FFI and can result in the adjustment or early termination of the FFI transaction, which could affect the Compartment's net asset value.

#### **Risk related to a change of the tax regime**

Any change to the tax legislation in any of the countries in which the Compartment is established, authorised for marketing or listed can affect the tax treatment of investors. In this case, the Compartment's manager assumes no liability relative to investors with regard to the payments having to be made to any competent tax authority.

#### **Risk related to a change of the tax regime affecting the underlyings**

Any change of the tax legislation applicable to the Compartment's underlyings can affect the Compartment's tax treatment. Consequently, in case of divergence between the anticipated tax treatment and the one actually applied to the Compartment (and/or to its counterparty in the FFI), the Compartment's net asset value may be affected.

#### **Risk related to regulations**

In case of change of the regulations in any country in which the Compartment is established, authorised for marketing or listed, the processes for the subscription, conversion and redemption of equities may be affected.

#### **Risk related to the regulations applicable to the underlyings**

In case of change of the regulations applicable to the Compartment's underlyings, the Compartment's net asset value can be affected, as can the processes for the subscription, conversion and redemption of equities.

#### **Risk related to events affecting the Benchmark Indicator**

In case of events affecting the Benchmark Indicator, the manager may, under the conditions and limits of the applicable legislation, have to suspend the subscription and redemption of Compartment equities. The calculation of the Compartment's net asset value can also be affected.

If the event persists, the Compartment's manager will decide on measures having to be adopted, which can have an impact on the Compartment's net asset value.

"Events affecting the Benchmark Indicator" are understood to mean the following situations:

- i) The Benchmark Indicator is considered to be incorrect or not reflective of the market's actual evolution,
- ii) The Benchmark Indicator is definitively discontinued by its supplier,
- iii) The supplier of the index is incapable of providing the level or value of the said Benchmark Indicator,
- iv) The supplier of the index makes a significant change to the formula or calculation method of the Benchmark Indicator (other than a minor modification such as the adjustment of the underlyings of this index or of the respective weightings between its various components), that cannot be effectively replicated by the Compartment at a reasonable cost.

- v) One or more components of the Benchmark Indicator becomes non-liquid, with the listing being suspended on an organised market, or components traded over-the-counter (such as bonds, for example) become non-liquid,
- vi) The Benchmark Indicator's components are impacted by transaction fees relative to the execution, delivery versus payment or specific fiscal constraints, without these fees being reflected in the Benchmark Indicator's performance.

**Securities transaction risk**

Should the issuer of a security underlying the Benchmark Indicator undertake an unanticipated review of a securities transaction ("ST"), that contradicts a prior and official announcement that had resulted in a valuation of the ST by the Compartment (and/or in a valuation of the ST by the Compartment's counterparty in a future financial instrument), the Compartment's net asset value may be affected, notably should the actual treatment of the ST by the Compartment differ from the ST's treatment in the methodology used by the Benchmark Indicator.

**Exchange risk linked to the Benchmark Indicator**

The Compartment is exposed to an exchange risk to the extent that the underlying securities making up the Benchmark Indicator could be listed in a currency other than that of the Benchmark Indicator, or be derivatives of securities listed in a currency other than that of the Benchmark Indicator. Fluctuating exchange rates are then likely to negatively affect the Benchmark Indicator monitored by the Compartment.

**Subscribers concerned and typical investor profile:**

The Compartment is open to any subscriber.

The investor subscribing to this Compartment wishes to obtain an exposure to the equity market with companies that have, as their primary source of income, activities related to renewable energy business.

The amount that it is reasonable to invest in this Compartment depends on your personal situation. To determine this amount, you must take into account your personal wealth and/or estate, cash requirements at the present and for five years, but also your desire to take risks or, on the contrary, to prefer a cautious investment. It is also highly recommended to sufficiently diversify one's investments so as to avoid an exposure only to this Compartment's risks.

Investors are therefore recommended to study their individual situations with their usual estate management advisers.

The minimum recommended investment term is greater than 5 years.

"U.S. Persons" (as defined below - see "COMMERCIAL ORDER INFORMATION") may not invest in the Compartment.

*For more details, the complete prospectus can be obtained by requesting it from the management company.*

- *The net asset value is available from the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The Compartment's complete prospectus and the latest annual and periodic documents are sent within one week of the bearer's written request, submitted to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*

- *Approval date by the AMF (Financial Markets Authority): 2 October 2007.*
- *Compartment approval date by the AMF (Financial Markets Authority): 3 July 2019.*
- *Compartment creation date: 5 September 2019.*
- *Fund creation date: 10 October 2007.*
- *Compartment creation date: 5 September 2019.*

# Activity report

The fund replicates the performance of the World Alternative Energy Total Return Index CW EUR (Ticker:WAEXC).

## **Performance trend at the closing date:**

Share name	ISIN	Share currency	Performance over the accounting year			Share performance since inception
			Share	Index	Foreign exchange	
Lyxor New Energy (DR) UCITS ETF - Dist	FR0010524777	EUR	35.61% <sup>(1)</sup>	36.35%		1.87%

<sup>(1)</sup> “The difference between the yearly performance of the fund and its index is due to:

- the management and the administrative fees;
- index replication costs;
- taxation incurred in relation to the methodology used in the Benchmark Index;
- the possible use by the manager of sampling or advanced index management techniques;

The Tracking Error is 0.1315% for the sub-fund. The Tracking Error target for the year was 0.3%. The tracking error has remained below the anticipated tracking error due to market conditions and replication techniques implemented by the management teams.

Since 05/10/2020, the management method used is that of direct "physical" replication of the World Alternative Energy Index CW Net Total Return which consists of the Fund's portfolio being invested directly and mainly in the securities making up the Benchmark Indicator, thus enabling the Fund to achieve its management objective. On this date the Fund changed its name from Lyxor New Energy UCITS ETF to Lyxor New Energy (DR) UCITS ETF.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** (not audited by the auditor)

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The “voting policy” document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the AMF [Financial Markets Authority] General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the Compartment: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2°)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

#### a) Description of the nature of the main criteria considered for ESG issues and the reasons for choosing them (reference III-1°-a)

As part of the SRI Policy, Lyxor has defined a shareholder engagement policy that includes a voting policy and an engagement policy. This document is available on Lyxor website.

The scope for voting is the following:

French Funds (Fonds Communs de Placement – FCP)\*, French & Luxembourgish SICAV (\*) limited to European issuers.

To prevent excess cost resulting by the voting process, Lyxor votes only where its consolidated holdings represent at least 0.10% of the company's equity capital.

(\*) Except the vehicles using a method of synthetic replication which are designed to track a financial exposure through a performance swap.

This fund applies an active ownership. This stake lets us influence companies to improve their ESG practices in the long term.

In terms of engagement, Lyxor joined the Climate Action 100+ initiative, committing itself to asking companies to improve their governance on climate change, reduce their greenhouse gas emissions and strengthen their financial climate-related communication through the implementation of the TCFD (Task Force on Climate-Related Financial Disclosures) recommendations.

Sustainability themed investments inherently contribute to addressing social and/or environmental challenges such as climate change, eco-efficiency and health.

For equities funds: the companies are eligible if their share of sales from the sector of activity is above a certain threshold, or if they are in a dominant position on the market in question.

For ETF funds which aim to track the benchmark index, the description of the ESG approach above applies to the Benchmark Index.

#### b) Description of the general information used for the analysis of issuers on criteria relating to compliance with ESG issues (reference III-2°)

The explicit inclusion of ESG risks and opportunities into traditional financial analysis and investment decisions must be based on a systematic process and appropriate research sources. The integration process focuses on the potential impact of ESG issues on company financials (positive and negative), which in turn may affect the investment decision.

Lyxor is using a variety of external information sources, including the following extra-financial rating agencies:

- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Defense List produced by the Group, based on ISS-Ethix data to identify companies considered in violation of its Defense policy,
- In the global context of the Societe Generale Group Environmental and Social Policies, LYXOR used the Global Compact List produced by the Group, based on Sustainalytics data to identify companies that are associated with serious and repeated breaches of criteria, standards and/or mandatory requirements relating to controversial sectors and products,
- In addition to internal research conducted on corporate governance, Lyxor uses ISS Proxy voting adviser for voting recommendations. These recommendations are based on the Lyxor's Voting Policy,
- MSCI and Sustainalytics ESG research to integrate ESG issues,
- Vigeo-Eiris to develop its ESG analysis and rating methodology applied to unlisted SME / ETI assets.

Each partnership has been put in place following a rigorous selection based on request for proposals and due diligence processes addressing specific topics.

#### c) Description of the methodology of the ESG analysis and the results (reference III-3°a)

Active Ownership - Governance:

A governance committee oversees the implementation of Lyxor's Voting Policy. It is empowered to establish voting guidelines and is responsible to ensure that these guidelines and procedures are followed. Lyxor revises its voting policy on a yearly basis. An annual voting report will be published on the Website Lyxor.com

Active Ownership - Operational set up:

For an optimal voting preparation process and execution Lyxor uses a Proxy Voting Advisor.

Lyxor currently uses the services of ISS (Institutional Shareholder Services) for the implementation of its voting policy.

Where electronic voting is possible, voting is cast through a Proxy Exchange Platform. In exceptional cases where electronic voting is not possible (notably for some French companies) proxy voting forms are filled out and sent to the relevant issuers by post.

For ETF funds with a Sustainable Themed Investment approach :

The Lyxor ETF aims to track its benchmark Index.

The index is designed by an index provider and potentially with an advisor for ESG input data. (such as Robeco SAM, Equileap, CBI, ...)

Details of the index methodology may be found on index provider website.

#### d) Description of how the results of the analysis on ESG issues are integrated in investment policies (Reference II-2°-d)

The detailed results of our shareholder engagement are available in the Lyxor annual voting report published on the Website Lyxor.com.

This year, as part of its engagement policy, Lyxor conducted 36 discussions with 32 European companies. The topics discussed mainly concerned corporate governance but also the integration of extra-financial issues in the overall strategy of the company or measures taken to reduce their greenhouse gas emissions.

In terms of the exercise of voting rights, the details of the vote on the fund are presented below.

The Lyxor Green Bonds (DR) UCITS ETF is invested in Green bonds which are fixed income securities whose proceeds are solely dedicated to the financing of eligible green projects focused on climate mitigation or adaptation efforts.

The Lyxor world water UCITS ETF aims to reproduce the performance of the index which consists of the 20 largest companies in the fields of water utilities, water infrastructure and water treatment.

The Lyxor new energy UCITS ETF aims to track the benchmark index which reflects the 20 largest stocks operating in the world alternative energy sector in the fields of solar, wind and biomass, the better use of energy generation such as energy meters and supra-conductors, power generation in close proximity to the consumer involving micro-turbines and fuel cells.

The LYXOR ETF Gender aims to track the evolution of an index which lists the most advanced companies in terms of gender equality in management and production functions as well as in terms of remuneration, work-life balance, internal policies, transparency and accountability, among others.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2°)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

## LYXOR NEW ENERGY (DR) UCITS ETF (compartment of the Multi Units France Sicav)

---

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

-the Germanwatch climate performance index score

-the environment performance score

-the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

-Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

-Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

LYXOR NEW ENERGY (DR) UCITS ETF  
(compartment of the Multi Units France Sicav)

Portfolio ESG Rating as of October 2020

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on benchmark index.

Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 0%  
Orange Flag 14%  
Yellow Flag 18%  
Green Flag 68%

**LYXOR NEW ENERGY (DR) UCITS ETF**  
(compartment of the Multi Units France Sicav)

**Climate Risks & Energy Transition**

**Portfolio Carbon Footprint as of October 2020**

<b>Carbon Emissions tons CO2e/\$M invested</b>	<b>Carbon Intensity tons CO2e/\$M sales</b>	<b>Weighted Average Carbon Intensity tons CO2e/\$M sales</b>	Portfolio rated by weight	98%
<b>112</b>	<b>339</b>	<b>621</b>	Scope 1 reported (vs estimated)	98%
			Scope2 reported (vs estimated)	84%
			Scope 1 & 2 estimations are based on MSCI methodology	

**Carbon Measurement methodology**

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information:

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD)<sup>1</sup>. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

<sup>1</sup> EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate metrics are calculated on benchmark index.

**Portfolio exposure to transition risk**

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	1%
Thermal Coal	1%
Natural Gaz	0%
Oil	0%

**Stranded Assets: Fossil Fuel Reserves**

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on investment of : \$1,000,000	
Thermal Coal (Tons)	15
Gas (MMBOE)	0.0000
Oil (MMBOE)	0.0000

**Stranded Assets: Potential Emissions from Fossil Fuel Reserves**

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	11.1
Thermal Coal	27.0
Oil	0.0
Gas	0.0
Total	38.1

## Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	27.0
Oil Sands	0.0
Shale Oil or Shale Gas	0.0
Sum High Impact Reserves	27.0
Other	11.1

## Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	27.7%	0.0%	0.0%
Some efforts	50.2%	86.8%	55.1%

## Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

44.3%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	10.7%
Liquid Fuel	0.1%
Natural Gas	36.4%
Nuclear	14.4%
Renewables	33.4%
Thermal Coal	5.0%

## Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-10.0%	30%
20-49.9%	33%
50-100%	36%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	85.5%
Energy Efficiency	69.4%
Green Building	0.0%
Pollution Prevention	1.6%
Sustainable Water	4.0%

## Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	27.6%
Energy Efficiency	14.0%
Green Building	0.0%
Pollution Prevention	0.0%
Sustainable Water	0.1%

## Physical Risk Corporate

Water Stress	20.1%	43.6%	36.2%	37.4%	46.2%	16.5%
Toxic Emissions & Waste				22.1%	71.2%	6.7%

## Voting Activity

By exercising its voting rights, Lyxor can contribute to improve the economic and financial performance of the companies in which it invests on behalf of its clients, with the aim of encouraging the adoption of best practices and mitigate the risk of business failure.

Data presented below reflects the exercise of Lyxor's voting rights since January 1st.

### Meeting overview

In order to prevent the excessive costs inherent in the voting process, Lyxor attends general meetings when the consolidated holding represents more than 0.10% of the company's share capital. This table details the number of General Meetings in which Lyxor participated compared to all those held by issuers included in the fund.

Number of meetings	0
Number of Voted Meetings	0
Participation rate at General Meetings	0.0%

### Instruction overview

As a responsible shareholder, Lyxor opposes resolutions that are not, in our opinion, in the interests of the shareholder. The table shows the distribution of FOR / AGAINST / ABSTENTION votes by resolution category.

Resolution	For	Against	Abstention

### Breakdown by country

In 2020, the Lyxor' voting scope was the European issuers.

The data details the geographical distribution of the General Meetings at which the Lyxor New Energy (DR) UCITS ETF fund participated during the financial year.

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/81/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

## Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter "AIFM Directive") and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter "UCITS V Directive"), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

#### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

#### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

#### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

During the financial year, the CIU did not carry out any transactions subject to the SFTR regulations, i.e. no repurchase agreements, securities or commodities lending/borrowing, buy/sell or sale/buy-back transactions, margin call loans and total return swaps (TRS).

## 1 Accounting rules and methods

The annual accounts are presented in the form provided for in ANC Regulation 2014-01, as amended. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value.

When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS operating under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last net asset value per unit known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.
- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates published the fixing WM Reuters on the same day of the Compartment's net asset value date.

# appendix

**Posting method for the negotiation fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the coupon received.

**Financial instruments received as collateral**

These financial instruments are listed under the “Financial instruments” item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the “Other temporary operations” item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract’s nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

For this Compartment, the following fees can be added to the operation and management fees (see summary Table hereinafter):

- Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment;
- Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document “KIID”.

<b>Fees invoiced to the Compartment</b>	<b>Basis</b>	<b>Schedule rate</b>
Financial management fees and administrative fees external to the management company including tax <sup>(1)</sup>	Net assets	maximum 0.60% per year
Maximum indirect costs (commissions and management fees)	Net assets	None
Transfer commissions	Collection on each transaction	None
Outperformance commissions	Net assets	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS.

**Accounting currency**

The Compartment accounting is carried out in Euro.

**Indication of accountancy changes declared to each of the shareholders individually**

- Occurred change: None.
- Future change: None.

**Indication of other changes declared to each of the shareholders individually** (*Not certified by the auditor*)

- Occurred change: None.
- Future change: None.

**Indication and justification of the changes to estimates and application provisions**

None.

**Indication of the nature of the errors corrected during the fiscal year**

None.

**Indication of the rights and conditions attached to each category of equities**

The Management Company reserves the right to distribute all or part of the amounts available for distribution once or several times a year and/or to capitalise them.

# appendix

The World Alternative Energy Index CW Net Total Return index (Waex) is calculated by Dow Jones Indexes, a department of the company Dow Jones & Company, Inc. ("Dow Jones") and compiled by the SAM ("SAM") group. "Dow Jones" and "Dow Jones Indexes" are registered trademarks of Dow Jones & Company, Inc. The investment products based on the Waex are not proposed, guaranteed, sold or promoted by Dow Jones Indexes nor by the company SAM; Dow Jones Indexes and SAM express no opinion on the recommendable nature or not of the investment in the said products. Dow Jones, SAM and their respective affiliated companies, sources and distributing agents (collectively the "Index Parties") decline all liability relative to the Société Générale, Lyxor AM or to any customer or third party in case of direct or indirect loss or damage resulting from (i) inaccurate or incomplete data provided by the Waex, or from delays, interruptions, errors or omissions regarding the said data or all related data (the "Index Data"), or from (ii) any decision or measure taken by Société Générale, Lyxor AM, any customer or third party on the basis of the Index Data. The Index Parties give no explicit or implicit cert to the Société Générale, Lyxor AM, to any of its customers or any third party with regard to the Index Data, notably any certificate pertaining in any way to the appropriateness, order, accuracy, exhaustiveness, validity, marketing, quality or adequacy for a particular purpose, nor any certificate with regard to the results that may be obtained by Société Générale, Lyxor AM, any of its customers or third party relative to the use of the Index Data. The Index Parties decline all liability relative to the Société Générale, Lyxor AM, its customers or third parties in case of operating loss, loss of profits or indirect, special or similar damages of any kind whatsoever, whether consisting of contractual damage, owing to negligence or some other cause, even if they had been informed of the possibility of such damage. There can be no contractual relationship of any kind between Dow Jones or SAM Group and any of the customers of the Société Générale or Lyxor AM for investment products based on the Waex or linked to the latter. The Lyxor AM ETF, based on the Waex, is not proposed, guaranteed, sold or promoted by the Index Parties, who express no opinion as to the recommendable nature or not of the investment.

Equity Dist / FR0010524777					
	<b>30.10.2020</b>	31.10.2019	28.06.2019	29.06.2018	30.06.2017
<b>Number of outstanding equities</b>	<b>16,081,709</b>	4,836,869	3,675,747	3,058,051	2,510,293
<b>Net asset value</b>	<b>34.9292</b>	25.9974	25.0302	20.7538	20.1056
<b>Unit distribution on net capital gains and losses (including advances)</b>	-	-	-	-	-
<b>Unit distribution (including advances)*</b>	<b>0.29</b>	-	0.32	0.13	0.19
<b>Unit tax credit transferred to holders (natural persons) <sup>(1)</sup></b>	-	-	-	-	-
<b>Unit capitalisation*</b>	-	-0.05	3.79	-0.26	2.80

\* The amounts of the unit distribution, the unit capitalisation and the tax credits are indicated in the accounting currency of the Compartment. The unit capitalisation corresponds to the profit or loss and the capital gains or losses on the number of outstanding units. This calculation method is applied from 1 January 2013.

<sup>(1)</sup> Pursuant to the Fiscal Instruction of 4 March 1993 from the Directorate General for taxes, the unit tax credit will be determined on the ex-dividend date by distribution of the total amount of the tax credits between the outstanding equities on that date.

**APPENDIX TO THE REPORT  
intended for Swiss subscribers**

This appendix makes the annual report with the FINMA requirements for the marketing in Switzerland. **It has not been certified by the accountants.**

Country of origin of the Compartment  
France.

Representative of the Swiss Compartment

Société Générale, Paris, Zurich Branch, has been authorised by the FINMA as the Compartment's representative in Switzerland while also assuming the payment service. The prospectus, articles of association, annual and semi-annual reports of the Compartment, the KIIDs as well as the list of purchases and sales made by the Fund during the fiscal year can be obtained on request and at no cost from the representative's head office in Switzerland, Société Générale, Paris, Zurich Branch, Talacker 50, PO Box 5070, 8021 Zurich.

Calculation of the Total Expense Ratio (in compliance with the recommendations of the Swiss Funds & Asset Management Association SFAMA)

Annual closing of the fund: 31-Oct.

UCITS management commission: 0.60 % including tax

Average assets of the fund for the period from 01/11/19 to 30/10/20: 332,252,753.52

Excerpt from the income statement

Expenses in euros	Annual report 31/10/2019	Half-yearly report 30/04/2020	Annual report 30/10/2020
Fund management commission	223,090.76	700,255.61	1,991,501.24
Performance fee to be paid to the manager of collective investments of capital	0.00	0.00	0.00
Depository bank commission	0.00	0.00	0.00
Other expenses	0.00	0.00	0.00
Taxes	0.00	0.00	0.00
Total operating expenses	223,090.76	700,255.61	1,991,501.24

Calculation of the TER, annualised for 6 months (from 01/11/19 to 30/10/20):

TER, including performance fee

$$(1,991,501.24/234,401,444.59) * 100$$

TER 0.60 %

Performance fee as a share in percentage of the net average assets:

COMPARTIMENT DE LA SICAV MULTI UNITS FRANCE

PLANET MONDE  
(compartment of the Multi Units France Sicav)

---

<b>Compartment / feeder</b>	PLANET MONDE is a compartment of the MULTI UNITS FRANCE Sicav
<b>Management company</b>	LYXOR INTERNATIONAL ASSET MANAGEMENT 17, cours Valmy - 92987 Paris La Défense Cedex.
<b>Depository and custodian</b>	SOCIÉTÉ GÉNÉRALE 75886 Paris Cedex 18.
<b>Statutory auditors</b>	PRICEWATERHOUSE COOPERS AUDIT 63, rue de Villiers - 92208 Neuilly-sur-Seine Cedex.

## INFORMATION ON THE INVESTMENTS AND MANAGEMENT

### **Classification:**

The Compartment is a feeder fund. As such, the Compartment permanently invests at least 85% or more of its assets in units of the Lyxor Planet fund, which is a mutual fund (MF) under French law, hereinafter referred to as the "MASTER UCITS".

The unit class of the MASTER UCITS invested by the Compartment is the unit class "Z - (EUR)" with ISIN code FR0010755769.

### **Terms of determination and allocation of amounts available for distribution:**

**Capi equity class:** Capitalisation of all the amounts available for distribution.

### **Management objective:**

The Compartment is an actively managed feeder fund and is not managed by reference to an index.

The management objective of the Compartment is identical to the management objective of the MASTER UCITS described in the section "INFORMATION RELATING TO THE MASTER UCITS".

The performance of the Compartment will differ from that of the MASTER UCITS due to the expenses incurred by the Compartment and/or due to the holding of cash by the Compartment.

### **INFORMATION RELATIVE TO THE MASTER UCITS:**

#### **INVESTMENT OBJECTIVE:**

*The management objective of the MASTER UCITS is to achieve capital appreciation by capturing the performance of different global asset classes by investing in listed index-linked UCITS ("UCITS ETF"), while limiting the average annual volatility of the MASTER UCITS to around 7%.*

### **Benchmark Indicator:**

No indicator is relevant with regard to the management techniques used.

### **BENCHMARK INDICATOR OF THE MASTER UCITS:**

*There is no relevant performance indicator for this Compartment.*

### **ELIGIBILITY OF THE MASTER UCITS**

*In accordance with the objectives and investment policy described above, the MASTER UCITS may invest more than 50% of its net assets in units or shares of other UCITS.*

**Investment Strategy:**

**1. Strategy used**

As the Compartment is a feeder fund of the MASTER UCITS, it must invest at least 85% of its assets in the shares of the MASTER UCITS, bearing in mind that its objective is to invest close to 100% of its net assets in units of the MASTER UCITS.

The Compartment may also hold cash on an ancillary basis.

A reminder of the investment strategy of the MASTER UCITS is mentioned in the paragraph below.

**REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS:**

*REFERENCE: IN THIS SECTION "REMINDER OF THE INVESTMENT STRATEGY OF THE MASTER UCITS".*

*"THE TERM "MANAGEMENT COMPANY" REFERS TO THE MANAGEMENT COMPANY OF THE MASTER FUND.*

**INVESTMENT POLICY of the MASTER UCITS**

**1. Investment process of the MASTER UCITS**

*The MASTER UCITS will invest mainly in a portfolio of trackers (or ETFs), i.e. "index" type UCITS that have been admitted to trading on a regulated market.*

*The investment strategy of the MASTER UCITS is based on a methodology and proprietary tools developed by the Management Company that systematically assess the long-term return and risk prospects of the main global asset classes (equities, bonds, raw materials and currencies) within the framework of geographical, sector or thematic approaches. The result is a diversified and flexible exposure that is built according to a two-step discretionary and dynamic management process:*

*(i) The construction of a "strategic portfolio", optimal for the MASTER UCITS which, without reflecting an opinion on short-term market trends, aims to generate performance over time. This research follows the following process:*

*1. Definition of a short-, medium- and long-term macroeconomic scenario on money market rates, corporate profits and inflation in the geographical areas included in the allocation;*

*2. Evaluation of the expected medium and long-term returns on the main asset classes taking into account this macroeconomic framework and their purchase prices. Such valuation is based on the traditional valuation models for these asset classes, developed and enhanced by the Management Company;*

*3. Calculation, on the basis of these expected returns, of the "strategic portfolio", which is optimal for the MASTER UCITS over the medium or long term investing on a fundamental basis. For this purpose, various analysis tools developed by the Management Company are used (financial scenario generators, dynamic portfolio optimisers).*

*(ii) This "strategic portfolio" is modified if necessary to take into account the Management Company's opinion on the short-term trends of the various markets and the risks they represent.*

*This formalised management process therefore leads to an effective allocation made up of supports representative of the asset classes selected for the composition of the "strategic portfolio", which is the result of positions taken with a medium- and long-term perspective (sensitive to the fundamental valuation of the various markets) and purely tactical positions (seeking to take advantage of the short-term dynamics of the various asset classes).*

*This process does not include a mechanism for overexposure through the use of forward financial instruments. The MASTER UCITS does not use leverage.*

*Investors' attention is drawn to the fact that the proportion of exposure to the various asset classes in the MASTER UCITS is likely to change very significantly according to their overvaluation/undervaluation cycles.*

*The MASTER UCITS shall invest up to 100% of its assets in units or shares of UCITS, particularly listed index-linked UCITS, and up to 30% of its total assets in units or shares of alternative investment funds governed by French or foreign law ("AIF") that comply with the four criteria stipulated in Article R 214-13 of the Monetary and Financial Code.*

**Exposure limits:**

*- Exposure to the equity asset class will be between 0% and 80% of the assets of the MASTER UCITS whose exposure limit will be raised to a maximum of 20% of the assets of the MASTER UCITS for small or mid-cap equities.*

*- Exposure to the bond asset class will be between 0% and 80% of the assets of the MASTER UCITS, whose exposure limit will be raised to a maximum of 30% of the assets of the MASTER UCITS for high-yield bonds (speculative securities);*

*- Exposure to the raw materials asset class will be between 0% and 30% of the assets of the MASTER UCITS;*

*- Exposure to the fixed income asset class will be between 0% and 30% of the assets of the MASTER UCITS;*

*- Exposure to the emerging markets asset class will be between 0% and 20% of the assets of the MASTER UCITS;*

*- The MASTER UCITS will not be exposed directly, but only indirectly (e.g. via an index or fund units) to the raw materials asset class;*

- The MASTER UCITS may be exposed to exchange rate, equity, bond and two-tier interest rate risks, the accumulation of which may in some cases represent up to 100% of the assets of the MASTER UCITS:

1. at the level of the assets of the MASTER UCITS, when the MASTER UCITS acquires directly-held securities or units of UCITS and/or AIFs listed in a currency other than the euro. This will be limited to approximately 30% maximum of the assets of the MASTER UCITS; and

2. within the selected UCITS and/or AIFs, where these involve exposure to foreign exchange risk. This exposure will not be constrained at the level of the MASTER UCITS.

The Management Company may also use forward financial instruments traded on regulated and/or over-the-counter markets. The manager may intervene on these markets to hedge against exchange rate risks. Transactions involving derivatives and securities with embedded derivatives will be carried out within the limit of a maximum of 100% of the assets of the master UCITS in order to hedge against exchange rate risk.

The desirable risk-taking for the MASTER UCITS naturally depends on market configurations and the return outlook for the different asset classes. However, the Management Company estimates that the volatility of the MASTER UCITS will fluctuate around an average of 7%, a level similar to that of a balanced portfolio composed of 50% equities and 50% bonds.

Certain asset classes are characterised by specific risks: small-cap equities, emerging countries, high-yield bonds.

### 2. Balance sheet assets (excluding embedded derivatives)

#### • Ownership of shares or units of other CIUs or investment funds

The MASTER UCITS will invest up to 100% of its assets in UCITS, in particular index-linked UCITS (or ETFs). These UCITS may comply with Directive 2009/65/EC (UCITS Directive) up to 100% of the assets.

In addition, these UCITS may be traded on organised markets such as the "NextTrack" segment of Euronext Paris S.A. Market makers undertake to maintain a buy/sell spread on these UCITS at all times in order to ensure a minimum level of liquidity.

They may also include units or shares of AIFs that meet the four criteria set out in Article R 214-13 of the French Monetary and Financial Code up to a maximum of 30% of the total assets.

The Management Company may invest in Investment Funds managed by the Management Company, affiliated companies and/or entities of the Société Générale Group.

#### • Equities

In the context of future optimisation of the management of the MASTER UCITS, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve his management objective. The MASTER UCITS may invest in baskets of equities.

#### • Debt securities

In the context of future optimisation of the management of the MASTER UCITS, the manager reserves the right to use other instruments within the limits of the regulations in order to achieve his management objective. The MASTER UCITS may invest in Exchange Traded Note ETNs.

The MASTER UCITS shall not enter into total return swap (TRS) contracts.

### 3. Off-balance sheet assets (derivative instruments)

In order to achieve its management objective, the MASTER UCITS may carry out transactions on the following derivative instruments: Nature of the intervention markets:

regulated

organized

over the counter

Risks on which the MASTER UCITS wishes to intervene:

equity

rates

foreign exchange

credit

Nature of interventions, all operations to be limited to the achievement of the management objective:

hedging

exposition

Nature of instruments used:

options

forward exchange

*Strategy for using derivatives to achieve the management objective:*

*general hedging of the portfolio, certain risks, foreign exchange, interest rates, equities, bonds. - up to 100% of the assets reconstitution of a synthetic exposure to assets, risks - up to 100% of the assets.*

*The MASTER UCITS shall use forward exchange contracts to expose the fund to currency pairs as part of its investment strategy. For unit classes which are not listed in EUR, the MASTER UCITS shall also enter into forward exchange contracts between the currency of the unit class and the Euro in order to hedge all or part of the exchange rate risk specific to each unit class as effectively as possible during the lifetime of the MASTER UCITS. In addition, for hedging and exposure purposes, the MASTER UCITS may have recourse to listed options on equities and/or bonds.*

#### 4. Securities including derivatives used by the MASTER UCITS

*None.*

#### 5. Deposits made by the MASTER UCITS

*The MASTER UCITS may have recourse, within the limit of 20% of its net assets, to deposits with credit institutions in order to optimise its cash management.*

#### 6. Cash borrowings made by the MASTER UCITS

*The MASTER UCITS may have temporary recourse, and up to 10% of its net assets may be invested in borrowings, particularly in order to optimise cash management.*

#### 7. Temporary purchases and sales of securities carried out by the MASTER UCITS

*The MASTER UCITS will not carry out temporary purchases and sales of securities.*

#### 8. Information relating to the financial guarantees of the MASTER UCITS

*In all cases where the investment strategy used exposes the MASTER UCITS to a counterparty risk, in particular in the context of the use by the MASTER UCITS of forward exchange contracts negotiated over-the-counter and/or in the context of temporary purchases and sales of securities (the fund will not carry out these transactions), the MASTER UCITS may receive securities and/or cash which are considered as guarantees in order to reduce the counterparty risk linked to these transactions.*

*Any financial guarantee received by the MASTER UCITS shall be returned in full ownership to the MASTER UCITS and delivered in the account of the MASTER UCITS opened in the books of its custodian. In this respect, the financial guarantees received will be recorded in the assets of the MASTER UCITS. In the event of default of the counterparty, the MASTER UCITS may dispose of the assets received from the counterparty in order to extinguish the debt of this counterparty towards the MASTER UCITS within the framework of the guaranteed transaction.*

*Any financial guarantee received by the MASTER UCITS in this context must comply with the criteria defined by the laws and regulations in force, particularly in terms of liquidity, valuation, credit quality of issuers, correlation, risks related to the management of guarantees and applicability. In particular, the guarantees received must comply with the following conditions:*

*(a) Any guarantee received must be of high quality, offer a level of liquidity in line with the minimums defined by the Management Company's risk management and be traded on a regulated market or multilateral trading facility with transparent pricing in order to be sold quickly at a price close to the prior valuation;*

*(b) They must be valued at the mark-to-market price at least on a daily basis and assets showing strong price volatility must not be accepted as a guarantee except in case of the application of a sufficiently cautious discount;*

*(c) They must comply with correlation limits (set by the Management Company's risk management department) calculated under financial contracts under EMIR regulations;*

*(d) They must be sufficiently diversified in terms of countries, markets and issuers, with a maximum exposure per issuer of 20% of the net asset value of the MASTER UCITS;*

*(e) The MASTER UCITS's Management Company must be able to fully realise them at any time, without consultation with the counterparty nor approval of the latter.*

*In accordance with the abovementioned conditions, the guarantees received by the MASTER UCITS may be composed of:*

*1) liquid assets or equivalent assets, including in particular short-term bank deposits and market instruments monetary;*

*2) bonds issued or guaranteed by an OECD Member State, its local authorities or institutions and supranational bodies of a Community, regional or global nature or by any other country, provided that the conditions (a) to (e) (above) are fully met;*

*3) equities or units issued by money market funds calculating a daily net asset value and rated AAA or equivalent;*

- 4) equities or units issued by CIUs investing mainly in bonds/shares indicated in points 5) and 6) below;
- 5) bonds issued or guaranteed by first-class issuers offering adequate liquidity (and whose financial rating is at least equal to BBB- (S&P and/or Fitch, and its equivalent at Moody's);
- 6) equities admitted to or traded on a regulated market in an EU Member State, on a stock exchange in an OECD Member State or on a stock exchange in another country provided that conditions (a) to (e) (above) are fully complied with and that such equities are included in a first-rate index.

Policy related to discounts:

The MASTER UCITS's management company will apply a margin to the financial guarantees received by the MF. The applied margins will notably depend on the following criteria:

- Nature of the asset received as guarantee;
- Maturity of the asset received as guarantee (if applicable);
- Rating of the issuer of the asset received as guarantee (if applicable).

Guarantees received in a currency other than the Euro may be subject to an additional margin.

Reinvestment of received guarantees:

Financial guarantees received in a non-cash form shall not be sold, reinvested or pledged. The guarantees received in cash will be, at the manager discretion:

- Placed as a deposit to an approved institution;
- Invested in government bonds of highest grade;
- Invested in short-term monetary collective investment undertakings, as set out in the guidelines for a common definition of European monetary collective investment undertakings.

The financial guarantees in cash reinvested shall be diversified in accordance with the requirements applicable to financial guarantees other than in cash.

**Risk profile:**

The shareholder's money will mainly be invested in units of the MASTER UCITS.

The risk profile of the Compartment is identical to that of the MASTER UCITS (see below).

**Reminder of the risk profile of the MASTER UCITS:**

Risk of capital loss

The capital invested in the MASTER UCITS is not guaranteed. Holders are liable to lose all or part of their initial investment.

Risk that the management objective of the MASTER UCITS may not be achieved

There can be no guarantee that the Management Objective of the MASTER UCITS will be achieved. There is no certainty that the Management Company will be able to allocate the assets of the MASTER UCITS in a profitable manner and the MASTER UCITS could suffer losses despite a concomitant positive performance of certain financial markets.

Equity risk

The MASTER UCITS may be exposed directly or indirectly to equities. The price of a share may go up or down and may in particular reflect changes in the risks associated with the issuing company or the economic situation of the corresponding market, but may also fluctuate according to investors' expectations. Equity markets have historically shown greater price volatility than fixed income markets. In particular, the MASTER UCITS may be exposed to small and medium capitalisation companies, which may increase market and liquidity risks. These price variations may therefore negatively affect the net asset value of the MASTER UCITS.

Currency risk

The MASTER UCITS may be exposed to foreign exchange risk resulting from its direct or indirect exposure to assets listed in currencies other than the euro. Fluctuations in the exchange rates of these currencies against the euro may therefore negatively affect the net asset value of the MASTER UCITS.

Interest rate risk

The price of a bond or debt security depends on changes in interest rates. In general, the price of a bond rises when interest rates fall and falls when interest rates rise. Interest rate risk is generally greater for investments with a long duration or maturity. Changes in interest rates may therefore have a positive or negative influence on the net asset value of the MASTER UCITS.

### Credit risk

If the issuer of a debt security (including convertible bonds) to which the MASTER UCITS is directly or indirectly exposed is no longer able to meet its maturities, the value of the security concerned may fall, resulting in a fall in the net asset value of the MASTER UCITS. A deterioration in the creditworthiness of one or more issuers of debt securities to which the MASTER UCITS is directly or indirectly exposed may lead to a depreciation in the valuation of the securities concerned and may therefore have a negative impact on the MASTER UCITS. In particular, the MASTER UCITS may be exposed to speculative bonds rated non-investment grade. In the event of default or insolvency of the issuer concerned, these bonds may be subject to a higher risk of loss than bonds of higher credit quality.

### Risks related to derivative instruments

The MASTER UCITS may use Financial Contracts, in particular forwards, listed or over-the-counter options and swaps. Exposure to Financial Contracts may involve a high level of risk. The amount required to initiate a position in Financial Contracts is potentially much less than the exposure obtained through these contracts, which implies a "leverage effect" at the level of each transaction. The market value of Financial Contracts is highly volatile and may therefore be subject to significant variations. Over-the-counter transactions may be less liquid than transactions traded on organised markets, where trading volumes are generally higher and prices may be more volatile. These different fluctuations in value and price may therefore adversely affect the net asset value of the MASTER UCITS.

Investment in "Non-Investment Grade" credit rating securities (speculative or "High Yield" bonds)

The MASTER UCITS will be exposed to speculative bonds rated "non-investment grade" (or "high-yield" bonds) or to speculative obligations that are not rated by any agency but are deemed to be of comparable quality to "non-investment grade" bonds. In the event of default or insolvency of the issuer concerned, these bonds may be subject to a higher risk of loss, in income and/or capital, than bonds with comparable characteristics but of higher credit quality. Their market value may also be more volatile.

### Counterparty risk

The MASTER UCITS is particularly exposed to counterparty risk resulting from its use of OTC financial contracts or effective portfolio management techniques. It is exposed to the risk of bankruptcy, payment default or any other type of default by any counterparty with which it has entered into a contract or transaction. In the event of default by the counterparty, the Financial Contract may be terminated early and the MASTER UCITS shall, where applicable, enter into another contract with a third party counterparty under the market conditions prevailing at the time of the occurrence of this event. The realisation of this risk may in particular cause losses for the MASTER UCITS and have an impact on the ability of the MASTER UCITS to achieve its management objective. In accordance with the regulations applicable to a MF, the counterparty risk may not exceed 10% of the total value of the assets of the MF per counterparty.

When Société Générale acts as a counterparty to a Financial Contract or to temporary acquisitions and/or sales of securities, conflicts of interest may arise between the Management Company of the MASTER UCITS and the counterparty. The Management Company manages these risks of conflicts of interest by implementing procedures designed to identify them, limit them and ensure that they are resolved equitably, where applicable.

### Risks related to exposure to emerging and developing markets

Exposure to emerging markets entails a greater risk of loss than that applicable to investments made in developed markets due, for example, to increased volatility in these markets or risk of economic and/or political instability.

### Risk related to raw materials:

Raw materials markets often face greater and more variable risks than other markets. The price of raw materials can therefore be very volatile, which could adversely affect the performance of the MASTER UCITS.

### **Eligible subscribers and typical investor profile:**

The Compartment is open to any subscriber.

The Compartment is intended for the needs of investors with low risk aversion. The level of risk depends, in particular, on market configurations and the return prospects of the various asset classes.

The investor's attention is therefore drawn to the fact that the proportion of the various financial securities in the assets of the MASTER UCITS is likely to evolve very significantly according to their over/undervaluation cycles.

The amount that it is reasonable to invest in this Compartment depends on the personal situation of each investor. To determine this amount, the investor should take into account his personal wealth and/or assets, his current and future money needs, as well as his desire to take risks or, on the contrary, to favour a prudent investment.

It is also recommended to sufficiently diversify your investments so as not to expose them solely to the risks of this Compartment.

Investors are therefore invited to study their particular situation with their usual asset management advisor.

The minimum recommended investment duration is greater than 3 years.

“U.S. Persons” (as defined in the prospectus - see “COMMERCIAL ORDER INFORMATION”) may not invest in the Compartment.

**For more details, the complete prospectus can be obtained by requesting it from the management company.**

- *The net asset value is available at the head office of LYXOR INTERNATIONAL ASSET MANAGEMENT. The full Compartment prospectus and the latest annual and periodical documents are sent within one week upon written request by the holder to LYXOR INTERNATIONAL ASSET MANAGEMENT, 17, cours Valmy - 92800 Puteaux.*
- *Creation date of of the Multi Units France Sicav: 4 March 2002.*
- *Date of AMF approval of the Compartment: 28 June 2019.*
- *Date of creation of the Compartment: 19 July 2019.*

# Activity Report

Between 31/10/2019 and 31/10/2020, Lyxor Planet Monde's performance was +0.99%, in line with that of the Master UCITS. This performance comes in a year that was particularly volatile, marked by a very violent fall in the equity markets in February and March before experiencing a very significant rebound. In the end, over the period, equity markets were bullish, with the exception of European markets, and driven by the United States and emerging markets. Over the period, bonds benefited from a monetary policy environment that remained extremely accommodative.

During the period, the world has experienced a global pandemic of Covid-19 affecting all continents without distinction. Managers have adapted their working organisation to this new environment to maintain an efficient operating, trading and investment process. The board of directors and the manager continue to monitor central banks measures, local financial regulators actions on financial markets and governments' efforts to contain the spread of the virus and their impacts on the economy and the securities held in the portfolio.

*The figures relating to past performances refer or relate to past periods and are not a reliable indicator of future results.*

## **Regulatory information**

**Transfer commission** *(not audited by the auditor)*

None.

## **Provisions for providing the investors with the various documents and reports relative to the management company's voting policy and its implementation.**

The "voting policy" document, the report from the management company on the conditions whereby it exercised the voting rights of the CIU that it manages and the information relative to the vote on each resolution can, pursuant to article 322-75, 322-76 and 322-77 of the Financial Markets Authority General Regulations, be consulted either on the management company's website or at its head office (upon request).

## **Overall risk of the Compartment**

The management company's method for measuring the overall risk of the CIU: the method chosen is the commitment method.

## ESG criteria

Pursuant to articles L533 22-1 and D533-16-1 of the Monetary and Financial Code.

### 1. Description of Environmental, Social, and Governance (ESG) criteria (reference II-2\*)

Lyxor is a signatory to the United Nations Principles for Responsible Investment (UN PRI) and has adopted a responsible investment policy that sets out the values and practices established by our organization to integrate environmental, social and governance ("ESG") in its investment solutions. Lyxor's SRI Policy is available under the website Lyxor.com and is revised each year.

For this fund the SRI Policy includes the following key areas:

In accordance with Article D. 533-16-1 of the [French] Monetary and Financial Code, subscribers are informed of the fact that the UCI does not simultaneously take into account the social, environmental and governance quality criteria in its investment policy

The fund is a structured fund which is a collective investment scheme where the management company seeks to achieve its investment objectives primarily through investment in or use of financial derivative instruments (for example, swap, repo or euro medium term note (EMTN)).

Lyxor has implemented a shareholder engagement. The Lyxor voting policy has been published and available on Lyxor website, Lyxor.com. For the reporting year, the voting scope does not include this fund.

The general approach taken by the management company on the ESG criteria are set out in the responsible investor policy available on the Lyxor.com website.

### 2. Description of integration of climate risks and the contribution to the energy transition (Reference II-2\*)

Lyxor extends gradually an ESG & Carbon rating capacity with a proprietary approach for its vehicles.

In addition to carbon footprint, in regard with the communication on how climate risk are taken into account and the contribution of a portfolio to the energy and ecological transition and its alignment with the international goal of limiting global warming to 2 degrees by 2100, we have decided to report whenever it is possible the following metrics calculated at portfolio level:

- Portfolio carbon footprint:

-Measuring the GHG emissions of its investments provides investors with an indication of their current financed emissions. For the sake of transparency, in these reports, Lyxor states that the main data on GHG emissions are based solely on scopes 1 & 2 due to the lack of availability of certain data, particularly those related to scope 3. For the total of carbon footprints, LYXOR indicates the percentage of the declarative data and estimates.

- In view of the Transition Risk and more specifically the stranded assets, Lyxor has chosen to present:

-The share of reserves (thermal coal, gas, oil) of which an investor would be responsible according to his investment in the portfolio (/ \$ M invested),

-Potential emissions from these same known reserves of fossil fuels (expressed in tCO<sub>2</sub>e / \$ M invested),

-A focus is presented on potential emissions from high-impact fossil fuel reserves (thermal coal, oil sands, oil and shale gas).

- With regard to carbon risk management:

-Lyxor presents at the portfolio level a classification of issuers based on their efforts on energy initiatives (use of cleaner energy sources, management of energy consumption and efficiency operational, carbon reduction targets).

- In regards with the portfolio's exposure to issuers offering environmental solutions :

-Lyxor presents the revenue exposure for environmental solutions that contribute to the Sustainable Development Goals (SDGs).

-In the view of the physical risk, and more specifically the biodiversity and land use, Lyxor has chosen to present :

For Government issuers in portfolio, several indicators weighted by the weight of sovereign issuers in the portfolio including :

-the Germanwatch climate performance index score

-the environment performance score

-the Environmental Vulnerability index

For corporate issuer in portfolio, based on MSCI ESG research raw data, the assessment of the risk exposure for a corporate may be comprised two different areas of analysis, depending on the Key Issue:

-Business Segment Risk Exposure – analyzes the breakdown of a company's business in terms of revenues, assets, or operations

-Geographic Segment Risk Exposure – analyzes the breakdown of a company's geographic segments in terms of revenues, assets, or operations

-In regards with the measurement of its portfolio's alignment with the climate objectives of the Paris Agreement, the methodology chosen by LYXOR applies to Equity and Corporate Bond funds. It aims to calculate the temperature of a fund, based on emission intensity indicators from the issuers making up the fund.

For each issuer (Corporate & Government), ESG Industry sector is provided by MSCI ESG Ratings.  
To be noticed, Government issuers are classified as belonging to "Financials" Industry Sector.

### ESG Measurement methodology (Corporate & Government issuers)

The underlying notes of the environmental, social and governance pillars aim to establish the risk Companies. They assess the financial risks associated with exposure to ESG factors and their management.

The risk scale ranges from 0 (high risk) to 10 (low risk).

Security scores at the Theme and ESG Pillar level are absolute and comparable across all industries. For Sectors and Themes, the portfolio-level score is based only on the subset of securities that have relevant scores. Security weights of the subset are rebalanced to equal 100%.

The weightings of the three criteria, Environmental, Social, and Governance, take into account the specific issues of each sector.

For Corporate: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Climate Change, Natural Capital, Pollution & Waste, Env Opportunities
- Social: Human Capital, Product Liability, Stakeholder Opposition, Soc Opportunities
- Governance: Corporate Governance, Stakeholder Opposition, Soc Opportunities

For Government: Metrics exposure and management of Key ESG issues cover the following themes:

- Environment: Env Externalities, Natural Resources
- Social: Human Capital, Economic Environment
- Governance: Financial Governance, Political Governance

Source : The Company carbon footprint data are provided by the MSCI agency.

All ESG metrics are calculated on exposure basket.

### Portfolio Exposure to ESG Controversies

Shows the percentage of portfolio securities with Red, Orange, Yellow and Green flagged ESG controversies.

The severity of the assessment through color-coded alerts :

- Red: Indicates that a company is involved in one or more very severe controversies;
- Orange: Indicates that a company has been involved in one or more recent severe structural controversies that are ongoing;
- Yellow: Indicates that the company is involved in severe-to-moderate level controversies;
- Green: Indicates that the company is not involved in any major controversies.
- None: Sovereign and/or Company not covered

Red Flag 1%  
Orange Flag 17%  
Yellow Flag 15%  
Green Flag 23%

## Climate Risks & Energy Transition

### Portfolio Carbon Footprint as of October 2020

Carbon Emissions tons CO2e/\$M invested	Carbon Intensity tons CO2e/\$M sales	Weighted Average Carbon Intensity tons CO2e/\$M sales		
35	201	214	Portfolio rated by weight	59%
			Scope 1 reported (vs estimated)	90%
			Scope2 reported (vs estimated)	85%
			Scope 1& 2 estimations are based on MSCI methodology	

### Carbon Measurement methodology

The GHG Protocol, developed by the world Resources Institute (WRI) and the World Business Council on Sustainable Development (WBCSD) sets the global standard for how to measure, manage and report greenhouse gas emissions.

This will provide investors some insight of their current financed emissions

LYXOR has developed a proprietary methodology to carry out the carbon footprint measurement of its portfolios.

LYXOR relies on issuer's carbon and environmental metrics (companies and governments) provided by MSCI. These metrics are partly based on declarative data and / or are estimated.

The GHG Protocol has set the global standard for GHG reporting, notably the three scopes of reporting information :

- Scope 1: Direct GHG Emissions from operations.
- Scope 2: Electricity indirect GHG Emissions. (the companies' indirect emissions from electricity, heating, or steam consumption).
- Scope 3: Other indirect GHG emissions.

The carbon footprint part of the report aims to account for the greenhouse gas emissions produced by the companies held in portfolio. The emissions are expressed in terms of carbon dioxide equivalents (CO2e).

LYXOR reports on all its funds, three Carbon intensities when transparency is allowed:

- Carbon emissions financed (tons CO2 e / \$M invested): they represent the carbon footprint of the standardized portfolio by \$M invested
- Carbon intensity (tons CO2e / \$M Sales): shows the carbon efficiency of the portfolio in terms of emissions per \$M of sales
- Weighted Average Carbon Intensity (tons CO2e / \$M Sales): a measure of the portfolio's exposure to the most carbon-intensive companies, reflected by the average carbon intensity of the companies (CO2 emissions normalized by revenue). The carbon intensity of the portfolio is calculated as the weighted average of the carbon intensities of underlying issuers.

These measures do not take into account all emissions induced by the company particularly those related to the use of products or upstream by suppliers (scope 3).

\*Methodology change\*

LYXOR has decided to change its ownership-based approach considering both the equity and the debt components of the company owned by the investor.

Until now, to measure its portfolio carbon emissions, LYXOR used the market capitalization as a way to measure this ownership by multiplying the amount invested by a factor in tCO2/\$ mkt cap. This ownership-based approach for carbon footprint analysis was only possible for equity portfolios.

As of 31st of July, Lyxor has reviewed its methodology and the allocation rule for the carbon emissions & fossil fuel reserves induced by its investments. Lyxor has decided to use the Enterprise Value as we consider creditors and shareholders equally responsible for the emissions of a company since creditors also represent a source of financing for carbon-emitting tangible assets. With this review, the new ratio used is tCO2/\$ of enterprise value, with the definition of Enterprise Value as the most recent available fiscal year-end enterprise value including cash (USD) \*. Moreover only the use of the Enterprise Value enables the analysis of a portfolio with both equity and bonds.

\* EVIC = Market capitalization at fiscal year-end date + preferred stock + minority interest + total debt

All Carbon & Climate are calculated on exposure basket.

### Portfolio exposure to transition risk

The data represents portfolio exposure to issuers with fossil fuel reserves (in terms of the weight of the portfolio), which may be stranded in the context of a low carbon transition. Thermal coal reserves are the most carbon intensive and therefore the most at risk.

The brown area is defined as the percentage of MWh generated from fossil fuels or Share of fossil fuel energies or share of the portfolio invested in fossil fuel extraction (to reflect products and services exposed to fossil fuels).

These metrics include only corporate issuers rated in Carbon.

Weight of the portfolio rated in Carbon	
Fossil Fuel Reserves	2%
Thermal Coal	1%
Natural Gaz	2%
Oil	2%

### Stranded Assets: Fossil Fuel Reserves

The table shows the reserves for which an investor would be responsible based on comparable dollar investments in the portfolio.

MMBOE stands for Million Barrels of Oil Equivalents.

These metrics include only corporate Issuers rated in Carbon.

Based on Investment of : \$1,000,000	
Thermal Coal (Tons)	64
Gas (MMBOE)	0.0002
Oil (MMBOE)	0.0002

### Stranded Assets: Potential Emissions from Fossil Fuel Reserves

Different fuels have different carbon content and different net calorific value. To make reserves of these fuels comparable in terms of contribution to greenhouse gas emissions, we calculate the potential emissions of the fuels and express these as tons of CO2 using the Potsdam Institute methodology.

In that the total potential emissions of existing known fossil fuel reserves vastly exceed the limit of emissions that scientific consensus indicates must be met in order to manage climate change, many of these reserves may not be usable. If this is the case, the market values of companies holding reserves may be overstated because they are based in part on the present value of these reserves assuming that they can be fully utilized.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Metallurgical Coal	85.5
Thermal Coal	116.1
Oil	112.8
Gas	69.5
Total	390.6

### Stranded Assets: High Impact Fossil Fuel Reserves

Certain fuels such as coal, oil sands, shale oil and shale gas are arguably more exposed to stranded assets risk as they have a higher carbon content than other types of oil and gas. Coal is by far the most carbon intensive fuel type, emitting roughly twice as much carbon emissions per kilowatt hour (kwh) than natural gas. In addition to higher carbon intensity, the extraction of unconventional sources of oil and gas can be costly because of various geological, technical and environmental challenges – this is the case with oil sands, which have been targeted as being particularly climate-unfriendly.

With regards to coal, the carbon stranded assets debate has focused on thermal coal, which is mainly used in power generation. While both thermal and metallurgical coal have a high carbon content, metallurgical, or coking coal is primarily used in steel making and has few substitutes, so many investors believe that while thermal coal is particularly vulnerable to stranding, there will still be a future for metallurgical coal.

These metrics include only corporate issuers rated in Carbon.

tCO2e/\$M Invested	
Thermal Coal	116.1
Oil Sands	22.6
Shale Oil or Shale Gas	16.0
Sum High Impact Reserves	154.6
Other	236.0

### Carbon Risk Management: Energy Initiatives

Companies have a variety of strategies to reduce emissions, including setting targets for reductions, using cleaner energy sources and managing energy consumption. While these efforts vary considerably across companies, we categorize them as No Efforts, Limited Efforts, Some Efforts, and Aggressive Efforts to make them more comparable. This information is presented for the portfolio.

These metrics include only corporate issuers rated in Carbon.

	Use of Cleaner Energy Sources	Energy Consumption Management & Operation Efficiency	Target Effort
Aggressive efforts	3.5%	2.8%	2.8%
Some efforts	43.4%	48.0%	37.0%
Limited efforts/Information	2.7%	2.1%	2.4%
No effort/No evidence	6.1%	1.9%	13.6%

### Energy Mix of energy producers within the portfolio

The company's fuel mix is estimated by taking the ratio of power-generation volume by fuel type (reported or estimated) and the total power-generation volume.

The row data used are the company-reported power-generation volume (MWh) by fuel type, where available. Where companies report total power-generation volume and percentages by fuel type rather than power-generation volume by fuel type (MWh), the data provider multiplies the total by the percentage for each fuel type to calculate MWh figures.

Source : MSCI ESG Research

Share of issuers in terms of power generation in portfolio

3.2%

Power generation by fuel as maximum percentage of total (rebased at 100%)

Hydro	9.7%
Liquid Fuel	0.5%
Natural Gas	33.1%
Nuclear	18.7%
Renewables	17.5%
Thermal Coal	20.4%

### Portfolio exposure to issuers offering environmental solutions

The data represent the portfolio's exposure to issuers offering environmental solutions (in terms of the weight of the portfolio) and the type of solutions proposed: energy efficiency, alternative energy, sustainable water, pollution prevention or sustainable construction. These issuers are likely to benefit from a low carbon transition.

The green area is defined as the percentage of outstandings invested in companies whose activity contributes to the fight against climate change (to reflect eco-solutions / green products).

These metrics include only corporate issuers rated in Carbon.

Issuer with a revenue dedicated to environmental solutions between:

0-19.9%	16%
20-49.9%	3%
50-100%	2%

Weight of Companies Offering Clean Technology Solutions

Alternative Energy	8.3%
Energy Efficiency	18.0%
Green Building	1.0%
Pollution Prevention	3.0%
Sustainable Water	3.8%

### Revenue exposure to environmental solutions which contribute to SDGs

Revenue exposure to environmental solutions reflects the extent to which company revenue is exposed to products and services that help solve the world's major environmental challenges. It is calculated as a weighted average, using portfolio or index weights and each issuer's percent of revenue generated from sustainable environmental solutions.

These metrics include only corporate issuers rated in Carbon.

Environmental Solutions Contribution

Alternative Energy	1.0%
Energy Efficiency	2.2%
Green Building	0.1%
Pollution Prevention	0.1%
Sustainable Water	0.3%

### Climate Protection Index Score of sovereign issuers

This indicator gives the score weighted by the weight of sovereign issuers in the portfolio of the Germanwatch climate performance index.

[www.climate-change-performance-index.org](http://www.climate-change-performance-index.org)

above 75 (Very High)

above 60 (high)

above 50 (Medium)

above 40 (Low)

below 40 (Very Low)

Not included in assessment

Climate Protection Index Score of sovereign issuers in portfolio

Score	41.7
Level	Low

### Environment Performance Score of sovereign issuers

Assesses a country's environmental performance. Three data points are used to assess this sub-factor:

(1) the population affected by natural disasters,

(2) forest cover change, and

(3) Greenhouse gas (GHG) intensity trend.

Regions with a higher proportion of the population affected by natural disasters, reduction in forest cover and increase in

GHG intensity score poorly. (Score: 0-10)

Score de performance environnementale des émetteurs souverains en portefeuille

Score	7.1
-------	-----

### Environment Vulnerability Index of sovereign issuers

The Environmental Vulnerability Index reflects the extent to which the natural environment of a country is prone to damage and degradation. This index contains indicators on weather and climate, geology, geography, ecosystem resources and

services, high winds, dry periods, endemics, frequency of earthquake, tsunamis, volcanic eruptions, etc.

Score indications are:

below 215 (Resilient),

above 215 (at Risk),

above 265 (Vulnerable),

above 315 (Highly vulnerable) and

above 365 (Extremely vulnerable).

Lyxor International Asset Management (LIAM) is a portfolio management company regulated by the Autorité des marchés financiers to conduct investment business in compliance with provisions of the UCITS (2009/65/CE) and AIFM (2011/61/EU) Directives. Société Générale is a French credit institution approved by the Autorité de contrôle prudentiel et de résolution.

### Compensation policy and practices

The compensation paid by Lyxor International Asset Management consists of fixed compensation and can, if allowed by economic conditions, include a variable component in the form of a discretionary bonus. This variable compensation is not related to the performance of the managed vehicles (no profit-sharing in the capital gains).

Lyxor International Asset Management applies the Société Générale Group remuneration policy. For LIAM, this Group policy takes into account the provisions related to remuneration listed in directives 2011/61/EU of the European Parliament and of the Council of 8 June 2011 (hereinafter “AIFM Directive”) and 2014/91/EU of the European Parliament and of the Council of 23 July 2014 (hereinafter “UCITS V Directive”), applicable to the sector of fund managers.

Within this framework, Lyxor International Asset Management has notably implemented, for all employees receiving partly deferred variable compensation, a mechanism for the exposure of part of this variable compensation to an index made up of several investment funds representing the activity of the Lyxor group, in order to ensure that the interests of employees are aligned with those of investors.

Lyxor International Asset Management's remuneration policy ensures appropriate risk management and compliance by its employees.

The details of the updated remuneration policy are available on the website: <https://www.lyxor.com/politiques>

### Breakdown of the fixed and variable compensation for the financial year

Over the course of the year, the compensation of the Lyxor International Asset Management personnel consisted of the following:

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Fixed compensation (EUR)	Variable compensation (EUR)	Total (EUR)
All personnel members	144	100.18	8,120,026	5,252,678	144

Lyxor International Asset Management	Number of Employees	Full-Time Equivalent	Aggregated Compensation (Fixed and Variable) (EUR)
Identified personnel*	27	22.32	4,272,167
Of which managers	20	16.94	2,183,217
Of which other identified persons	7	5.38	2,088,950

(\*) Personnel members whose professional activity has a substantial impact on the risk profiles of Lyxor International Asset Management, or of the UCITS or AIF managed by Lyxor International Asset Management, as defined in article L533-22-2 of the [French] Monetary and Financial Code.

The figures indicated in the above tables correspond to the amounts, before deduction of any social charges or tax, allocated during the annual compensation review campaign that was carried out during the course of the year, on the basis of the perimeter of the personnel as on 31 December of the previous financial year. As such, for example, the indicated amounts of variable compensation are the amounts allocated to employees, whether partially deferred or not, and regardless of the amount actually collected during this financial year in connection with variable compensation deferred from a previous financial year. No “carried interest” was paid during the financial year.

### Lyxor's best selection and execution policy

Information on best selection and execution policies is available at [www.lyxor.com](http://www.lyxor.com)

### Transparency of securities financing operations and reuse of financial instruments SFTR regulation

(Accounting currency of the CIU)

In the course of the fiscal year, the CIU did not perform financing operations subject to the Securities Financing Transactions Regulation, i.e. repos, securities or commodities lending/borrowing transactions, buy-sell back or sell-buy back transactions, margin lending transactions, or total return swaps (TRS).

## 1 Accounting rules and methods

The annual accounts are presented in the form required by the amended Regulation ANC No. 2014-01. The financial statements have been prepared by the management company on the basis of available information in the evolving context of the Covid-19 crisis.

### **Assessment rules**

The Compartment's assets are assessed in compliance with the applicable laws and regulations, and more particularly with the rules defined in regulation no. 2014-01 of the Accounting Regulatory Committee dated 14 January 2014 relative to the chart of accounts of open-ended undertakings for collective investment.

The financial instruments traded on a regulated market are assessed at the closing price on the day before the calculation day of the net asset value. When these financial instruments are traded on several regulated markets at the same time, the chosen closing price is the one of the regulated market in which they are primarily traded.

However, in the absence of significant transactions on a regulated market, the following financial instruments are assessed using the following specific methods:

- Negotiable debt securities ("NDS") having a residual life upon acquisition that is less than or equal to 3 months are assessed with a straight-line extension over the residual lifespan of the difference between the acquisition value and the redemption value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan at acquisition is greater than 3 months but of which the residual lifespan on the net asset value closing date is equal to or less than 3 months, are assessed by means of a linear distribution, over the residual lifespan, of the difference between the last adopted current value and the reimbursement value. The management company nevertheless reserves the possibility of assessing these securities at the actual value in case of particular sensitivity to market risks (rates, etc.). The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer;
- NDS, of which the residual lifespan on the net asset value closing date is greater than 3 months, are assessed at their current value. The chosen rate is that of the equivalent security issues allocated to the risk margin related to the issuer.
- Firm future financial instruments traded on organised markets are assessed at the clearing price on the day before the calculation day of the net asset value. Conditional future financial instruments traded on organised markets are assessed at the market value on the day before the calculation day of the net asset value. Over-the-counter firm or conditional future financial instruments are assessed at the price given by the financial instrument's counterparty. The management company independently carries out a verification of this valuation.
- Deposits are assessed at their nominal value, plus any related interest that has accrued.
- Subscription warrants, cash certificates, promissory notes and mortgage notes are assessed at their probable negotiation value, under the management company's responsibility.
- Temporary securities acquisitions and sales are assessed at the market price.
- Units and equities of UCITS under French law are assessed at the last net asset value known on the calculation date of the Compartment's net asset value.
- Units and equities of UCITS operating under foreign law are assessed at the last unit net asset value known on the calculation date of the Compartment's net asset value.
- Financial instruments traded on a regulated market for which the price has not been determined or for which the price has been corrected are assessed at their probable negotiation value, under the management company's responsibility.

- The exchange rates used for the assessment of financial instruments listed in a currency other than the Compartment's reference currency are the exchange rates disseminated by the fixing WM Reuters the day of the Compartment's net asset value.

**Posting method for the negotiation fees**

The chosen method is that of excluded fees.

**Posting method of incomes from fixed income securities**

The chosen method is that of the coupon received.

**Financial instruments received as collateral**

These financial instruments are listed under the "Financial instruments" item according to their nature, and the debt representing the obligation to return financial instruments is recorded on the liabilities side, for the same value, under the "Other temporary operations" item.

These financial instruments are valued according to the same valuation rules as financial securities of a similar nature, as presented above.

**Valuation methods for off-balance sheet commitments**

Off-balance sheet operations are valued at the commitment value.

The commitment value for firm futures contracts is equal to the price (in the currency of the Compartment) multiplied by the number of contracts multiplied by the face value.

The commitment value for conditional operations is equal to the price of the underlying security (in the currency of the Compartment) multiplied by the number of contracts multiplied by the delta multiplied by the underlying face value.

The commitment value for the swap contracts is equal to the contract's nominal amount (in the currency of the Compartment).

**Operation and management fees**

These fees include all of the fees invoiced directly to the Compartment, except for the transaction fees. The transaction fees include intermediation fees (brokerage, stock exchange tax, etc.) and the transfer commission which, if relevant, may notably be collected by the depository and management company.

The following fees can be added to the operation and management fees (see summary Table hereinafter):

Outperformance commissions: these commissions reward the management company when the Compartment has exceeded its objectives and are invoiced to the Compartment; Transfer commissions invoiced to the Compartment.

For more details on the fees actually invoiced to the Compartment, refer to the Statistical Part of the Key Investor Information Document "KIID".

appendix

<b>Fees invoiced to the COMPARTMENT</b>	<b>Basis</b>	<b>Schedule rate</b>
Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax <sup>(1)</sup>	Net assets	maximum 1.20% per year
Maximum indirect costs (commissions and management fees)	Net assets	maximum 1.10% per year
Outperformance commission	Net assets	None
Transfer commission	Collection on each transaction	None

<sup>(1)</sup> including all fees excluding transaction fees, outperformance fees and fees related to investments in UCITS or AIF.

<sup>(2)</sup> including the maximum indirect management fees (commissions and management fees) invoiced to the MASTER UCITS.

<i>Fees invoiced to the MASTER UCITS</i>	<i>Basis</i>	<i>Schedule rate</i>
<i>Financial management fees and administrative fees external to the portfolio management company (Auditor, Depository, distribution, lawyers) including tax <sup>(1)</sup></i>	<i>Net assets</i>	<i>0.1 incl. VAT</i>

### 3. Information supplements

#### 3.1 Financial instruments: breakdown by the instrument's legal or economic type

Breakdown of the off-balance sheet headings by market type (notably rates, equities)

	Rate	Equities	Exchange	Other
<b>Hedging</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-
<b>Other operations</b>				
Commitments on regulated or similar markets	-	-	-	-
Over-the-counter commitments	-	-	-	-
Other commitments	-	-	-	-

#### 3.2 Breakdown by rate types of the asset, liability and off-balance sheet items

	Fixed rate	Variable rate	Revisable rate	Other
<b>Assets</b>	-	-	-	-
Temporary financial securities operations	-	-	-	-
Financial accounts	-	-	-	2,966.28
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

#### 3.3 Breakdown by residual maturity of the asset, liability and off-balance sheet items

	0-3 months	3 months - 1 year	1-3 years	3-5 years	>5 years
<b>Assets</b>	-	-	-	-	-
Temporary financial securities operations	-	-	-	-	-
Financial accounts	2,966.28	-	-	-	-
<b>Off-balance sheet</b>					
Hedging	-	-	-	-	-
Other operations	-	-	-	-	-

PLANET MONDE  
(compartment of the Multi Units France Sicav)

**3.4 Breakdown by listing or assessment currency of the asset, liability and off-balance sheet items**

*This breakdown is given for the main listing or assessment currencies, with the exception of the currency for the keeping of the accounts.*

By main currency	C1	C2	C3	Other currencies
<b>Assets</b>				
Master CIU	-	-	-	-
Temporary securities operations	-	-	-	-
Receivables	-	-	-	-
Financial accounts	-	-	-	-
Other assets	-	-	-	-
<b>Liabilities</b>				
Debts	-	-	-	-
Financial accounts	-	-	-	-
<b>Off-balance sheet</b>				
Hedging	-	-	-	-
Other operations	-	-	-	-

**3.5 Receivables and Debts: breakdown by type**

*Details of the elements comprising the “other receivables” and “other debts” items, notably breakdown of the future foreign exchange operations by type of operation (purchase/sale).*

<b>Receivables</b>	<b>2,547.91</b>
Future foreign exchange operations of currencies:	
Future purchases of currencies	-
Total traded amount of future sales of currencies	-
Other receivables:	
Subscriptions receivable	1,498.38
Other receivables	1,049.53
-	-
-	-
-	-
Other operations	-
<b>Debts</b>	<b>9,126.66</b>
Future foreign exchange operations of currencies:	
Future sales of currencies	-
Total traded amount of future purchases of currencies	-
Other debts:	
Redemptions to be paid	8,338.61
Accrued expenses	733.29
Miscellaneous debtors and creditors	54.76
-	-
-	-
Other operations	-

### 3.6 Shareholders' equity

	Subscriptions		Redemptions	
	Number of equities	Amount	Number of equities	Amount
Number of equities issued/redeemed during the fiscal year:	8,328.593	840,696.83	4,054.62	416,552.37
Subscription / redemption commission by equity category:		354.48		-
Remittances by equity category:		354.48		-
Commissions acquired by the Compartment by equity category:		-		-

### 3.7 Management fees

Operating and management fees (fixed fees) as % of the average net assets	<b>1.20</b>
Performance commissions (variable fees): amount of costs for the fiscal year	
Retrocession of management fees:	
- Total amount of fees retroceded to the Compartment	-
- Breakdown by "target" CIU:	
- CIU 1	-
- CIU 2	-

### 3.8 Given and received commitments

- 3.8.1 Description of guarantees received by the CIU with indication of the capital guarantees ..... **None**  
3.8.2 Description of the other commitments received and/or given ..... **None**

### 3.9 Other information

3.9.1 Current value of the financial instruments that are the subject of temporary acquisition:	
- Financial instruments under reverse repurchase agreements	-
- Other temporary operations	-
3.9.2 Current value of the financial instruments comprising security deposits:	
Financial instruments received as guarantees and not included in the balance sheet:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
Financial instruments given as guarantees and maintained in their original item:	
- equities	-
- bonds	-
- debt securities	-
- other financial instruments	-
3.9.3 Financial instruments held in the portfolio, issued by entities linked to the management company (fund) or to the financial managers (Sicav) and CIU managed by these entities:	
- CIU securities	<b>792,167.15</b>
- Swaps	-

<b>Unit capitalisation *</b>	<b>0.63</b>	-0.34	-	-	-

<sup>(1)</sup> Pursuant to the Tax Instruction of 4 March 1993 of the French General Tax Department, the unit tax credit is determined on the ex-dividend date by dividing the total amount of the tax credits among the shares outstanding on that date.

<sup>(2)</sup> The unit capitalization corresponds to the sum of income and net capital gains and losses on the number of shares in circulation. This calculation method has been applied since 1 January 2013.

Date of creation of the Compartment: 19 July 2019.
